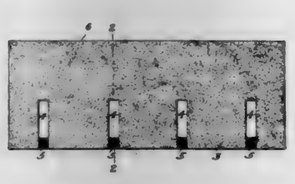
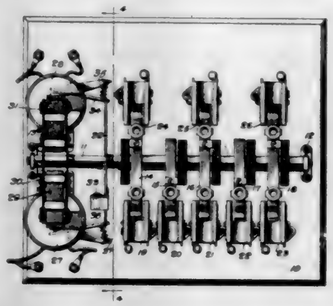
1,559,109. ROOFING ELEMENT. LESTER KIRSCHBRAUN, Evanston, Ill., assignor to Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1920. Serial No. 434,389. 3 Claims. (Cl. 108—8.)



1. A shingle strip having a felted fibrous base coated with an adhesive material, a granular surfacing applied thereto, slots extending transversely across said strip near one end, and terminating short of that end to present an unbroken closed lower edge when the shingle is laid, the connecting unbroken portions thus provided being of a different color than the major color of the strip.

1,559,110. MOTOR CONTROLLER. GEORGE LEDDICK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 25, 1921. Serial No. 464,094. 5 Claims. (Cl. 200—98.)



1. The combination in a motor controller of a switch having a neutral position between two operative positions, an electromagnet for throwing the switch to and magnetically holding the same in the first operative position, a second electromagnet for throwing the switch to and magnetically holding the same in the second operative position, biasing means for returning the switch from each operative position to the neutral position upon the deenergization of the corresponding electromagnet, and latching mechanism comprising a pair of cooperating latches controlled by said electromagnets for stopping and holding the switch in the neutral position.

---

1,559,111. TOY FURNITURE. FREDRICK J. LEES, Saginaw, Mich. Filed June 21, 1923. Serial No. 646,809. 1 Claim. (Cl. 46—37.)

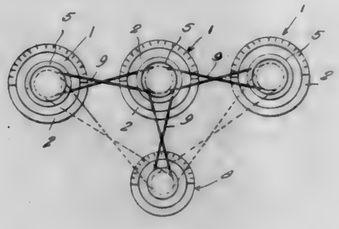
A pair of flat sides each formed with a horizontal slit communicating with an opening narrower than said slit, said sides also formed with bayonet slots in their upper ends, a seat member formed with an ear at each side near its front end, a narrow neck adapted to fit the horizontal slit of said flat side when inserted in said narrow opening, the rear edge of said seat formed with a pair of slots, a back member having slots interlocking with the slots of said seat, the upper part of said back member slotted and adapted to interlock in the bayonet slots of said side members.

---

1,559,112. UNIT CONTROL FOR RADIO RECEIVING SETS. MANUEL L. LUJÁN, Los Angeles, Calif. Filed Oct. 8, 1924. Serial No. 742,418. 1 Claim. (Cl. 74—7.)

An operating device for unit controlled mechanism of radio receiving sets, wherein a plurality of instruments are provided with rotatable shafts arranged in spaced parallel relation and operable for effecting the adjustment of the receiving capacity of said radio set; comprising an annular disk formed with a central cylindrical projection extending axially therefrom, the end of

said projection being formed with an annular flange to provide an operating knob, said cylindrical projection having a plurality of annular grooves formed therein, said disk and cylindrical projection having a socket extending axially therein from one end portion, for receiv-



ing the rotatable shaft of one of said istruments, and means mounted in the cylindrical projection for engaging the shaft in said socket and locking the device on said shaft, whereby belts mounted in the grooves on the devices applied to a plurality of instruments serve to transmit the motion of one device to the other.

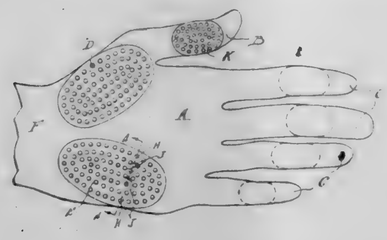
---

1,559,113. MANUFACTURE OF TITANIUM SULFATE. HERBERT N. MCCOY, Chicago, Ill., assignor to Lindsay Light Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1924. Serial No. 720,132. 4 Claims. (Cl. 23—117.)

1. The method of forming soluble titanic sulfate consisting in reacting upon basic titanium sulfate with fuming sulfuric acid.

---

1,559,114. RUBBER GLOVE. CLARENCE H. MARANVILLE, Akron, Ohio. Filed Sept. 15, 1923. Serial No. 662,938. 1 Claim. (Cl. 15—227.)

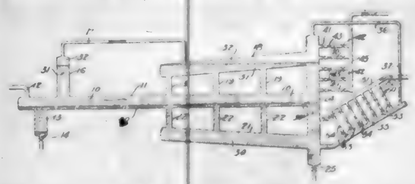


A glove comprising an all rubber body having finger and thumb portions, such portions having thickened walls in zones, said thickened zone portions having projections extending from the surface thereof and the thickened portions being integral elastic portions of the glove body.

---

1,559,115. THROTTLED OUTLET SEPARATOR. WILLIAM M. MARKER and WILLIAM B. ALLEN, Ventura, Calif. Filed July 5, 1922. Serial No. 572,924. 5 Claims. (Cl. 183—27.)

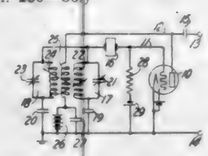
1. In a separator of the class described, the combination of: a substantially horizontal pipe into which the mixture is fed; a gas dome at the forward end of said pipe; a second pipe coextensive with the rearward end of said first pipe; a gas pressure equalizing pipe extending between said gas dome and said second pipe; and tubular means extending between said pipes at suitable intervals whereby communication is established between



said first pipe and said second pipe so as to form a stratification chamber of increased volume but having physical strength equal to that of the first pipe.

---

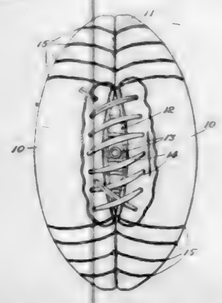
1,559,116. WAVE GENERATING AND MODULATING SYSTEM. WARREN ALVIN MARRISON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1924. Serial No. 743,915. 14 Claims. (Cl. 250—36.)



1. An oscillation generator comprising means for generating a plurality of different frequency oscillations and a piezo-electric device traversed by said oscillations and vibrating at a plurality of natural frequencies corresponding to the frequency of said oscillations.

---

1,559,117. FOOTBALL. JOHN E. MAYNARD, Plymouth, N. H., assignor to The Draper-Maynard Company, Plymouth, N. H., a Corporation of New Hampshire. Filed Oct. 11, 1923. Serial No. 667,984. 1 Claim. (Cl. 273—65.)



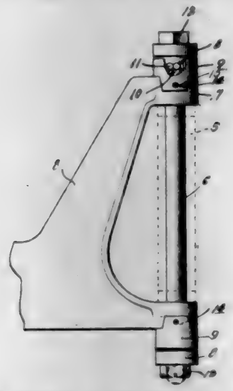
A football of generally ellipsoidal form comprising a plurality of longitudinal sections sewed together at their edges to form longitudinal seams, one of said seams having a central opening for the reception of an inflatable bladder, and a series of spaced circumferential lines of stitching disposed transversely to said seams at the opposite ends of said ball, said series extending from the ends of said central opening to points adjacent the extreme opposite ends of said ball.

---

1,559,118. BALL-BEARING CONSTRUCTION. WILLIAM B. MESSINK, Carrollton, Ky. Filed July 6, 1923. Serial No. 649,850. 1 Claim. (Cl. 308—189.)

A ball bearing attachment for use with axles having enlargements at their ends, said attachment including a

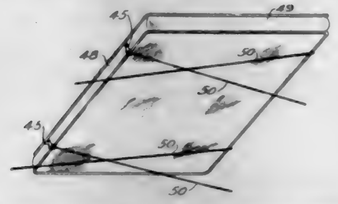
cup-shaped body portion having a ball race formed therein, depending fingers formed integral with the body portion and adapted to rest on opposite sides of the enlarge-



ments, and securing screws adapted to pass through the fingers and engage the enlargements to restrict movement of the body portion.

---

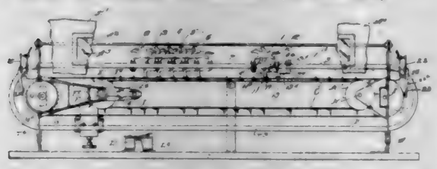
1,559,119. MATTRESS RETAINER. ELIZABETH N. MILLER, Los Angeles, Calif., assignor of one-half to Benjamin F. Schmidt, Los Angeles, Calif. Filed Apr. 3, 1922. Serial No. 548,944. 1 Claim. (Cl. 5—322.)



In combination: a bed structure; a mattress supported by said bed structure; straps connected at one end to one side edge of said mattress and at their other end to the opposite side of said bed structure, and other straps connected at one end to the other side edge of said mattress and at their other end to the other side of said bed structure, whereby either side edge of the mattress may be raised above said bed structure.

---

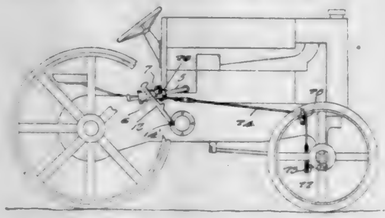
1,559,120. TOY RACE COURSE. FRED L. MILLS, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1924. Serial No. 706,056. 37 Claims. (Cl. 273—86.)



1. In a device of the character set forth, a series of tracks, racers mounted thereon, a permutation device adapted to actuate said racers, and separate movable means for positioning said racers within the range of action of said permutation device.

---

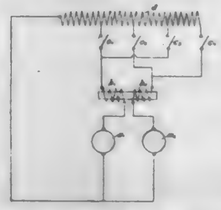
1,559,121. TRACTOR ANTIBUCKING ATTACHMENT. JOHN H. MOORE, Tiptop, Va. Filed May 9, 1925. Serial No. 29,103. 1 Claim. (Cl. 74—86.)



In combination, a pedal, a bracket on the pedal, a dog pivoted to the bracket and provided with an engaging finger and a lug and a notch, a spring on the bracket engaged with the notch, a plate having a pair of spaced stops with teeth disposed therebetween so that when the pedal is raised the finger engages the upper stop and the spring normally holds the pawl so that said finger will engage the teeth and when the pedal is depressed the lug will engage the lower stop and swing the pawl so that said spring will hold the finger out of engagement with the teeth until it again strikes the upper stop.

---

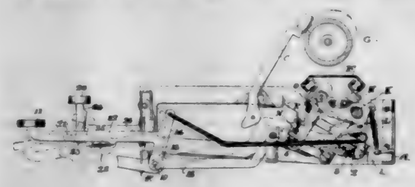
1,559,122. METHOD OF CONNECTING ALTERNATING-CURRENT COMMUTATOR MOTORS. PAUL MÜLLER, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 19, 1922. Serial No. 562,234. 2 Claims. (Cl. 172—274.)



1. A motor drive consisting of a plurality of alternating current commutator motors, a transformer having a plurality of taps in its secondary, switches for connecting said motors in parallel to said transformer secondary and for changing the connections to different taps and a reactor having separate windings in each motor circuit between the motors and said switches.

---

1,559,123. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company Inc., New York, N. Y., a Corporation of New York. Filed Feb. 12, 1925. Serial No. 8,791. 11 Claims. (Cl. 197—73.)



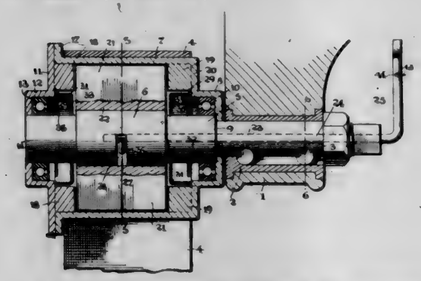
1. In a typewriting machine, case shift mechanism comprising a shift frame having a depending arm, a shift key lever having engagement at its rear end with

the lower end of said arm to lock the frame in normal position, an dsaid lever also having a projection and a link connecting said projection with said arm intermediate its ends to move said frame.

1,559,124. WINDOW-SHADE AND CURTAIN-ROD BRACKET. CASS P. NEWTON, Des Moines, Iowa. Filed June 16, 1924. Serial No. 720,864. 1 Claim. (Cl. 156—24.)

A bracket for window shades and curtain rods formed complete of a single piece of sheet metal and comprising a base portion formed with screw openings and a part extended substantially at right angles thereto for receiving a window shade and a curtain rod, and having formed therein nearest the base member a suitable opening to receive a window shade and at its outer end being formed with a substantially V-shaped notch, the material at the inner edge of the V-shaped notch being formed with an integral tongue normally projecting across the V-shaped notch and capable of being bent or twisted to overlap a curtain rod to prevent its upward movement, said tongue being of sufficiently heavy material to normally retain its position and prevent upward movement of the curtain rod without any additional fastening devices.

1,559,125. GOVERNOR. ORR TILTON NICHOL, St. Edwards, Nebr. Filed Apr. 13, 1923. Serial No. 631,953. 7 Claims. (Cl. 264—13.)

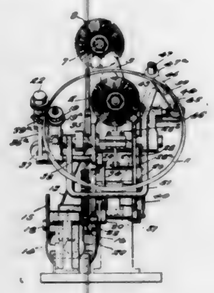


2. A governor for tractors comprising in combination, a hollow pulley, fan blades radially connected with the pulley, drag vanes radially disposed within the pulley, a shaft upon which said pulley is mounted for rotation, a sleeve provided with blades mounted on the shaft, with the blades adapted for slight rotation between the drag vanes, said shaft being provided with a longitudinal bore, a rod loosely mounted within the bore, a pin connecting the sleeve with the rod, said shaft being provided with a slot in which the pin is adapted to oscillate, said pulley being adapted to be partially filled with fluid.

1,559,126. PROCESS FOR THE MANUFACTURE OF COLLOIDAL SUBSTANCES IN THE FORM OF SMALL BALLS OR GRAINS. ALBERT OBERSOHN, Berlin-Charlottenburg, WILHELM WACHTEL, Berlin, DANIEL SAKOM, Wiesbaden, and PAUL ASKENASY, Karlsruhe, Germany. Original application filed Mar. 13, 1924, Serial No. 699,127. Divided and this application filed Jan. 7, 1925. Serial No. 1,086. 2 Claims. (Cl. 83—91.)

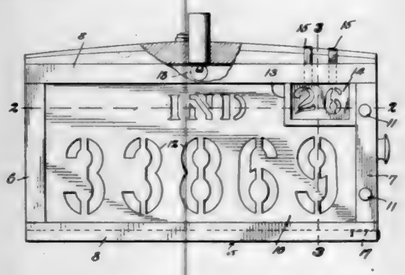
1. The process of preparing glue globules which consists in preparing a hot concentrated solution of glue, forming said solution into drops by spraying the same under pressure, and passing said drops into and through a gaseous cooling agent under pressure to retard the rate of passage of said drops through said agent.

1,559,127. BEAD-CORE-BUFFING MACHINE. JOSEPH E. PERRAULT and MALCOLM S. CATE, Watertown, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1924. Serial No. 748,896. 16 Claims. (Cl. 15—21.)



8. Apparatus of the class described, comprising a rotatable buffing element, means for supporting a bead ring in encircling position relative thereto, but out of contact therewith, said means including means for progressively feeding said bead past the buffing element and means for deflecting said ring into contact with said buffing element.

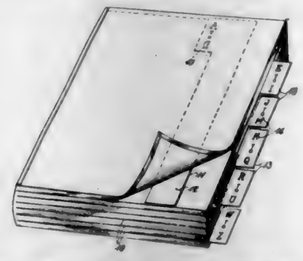
1,559,128. LICENSE-PLATE CARRIER. FOSTER B. PETTIT and GERRY H. KNOWLTON, Logansport, Ind. Filed June 25, 1925. Serial No. 39,562. 3 Claims. (Cl. 40.)



1. In a device of the character described, a box-like body portion, the front and rear of the body portion being open, said body portion having grooves to receive a license plate, means extending through one of the grooves to lock a license plate within the grooves, and an inner section having a rear wall adapted to normally close the open rear surface of the body portion.

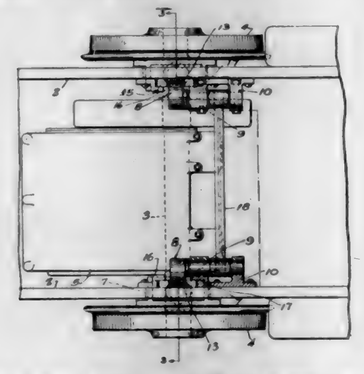
1,559,129. INDEX BOOK AND METHOD OF PRODUCING THE SAME. ARTHUR WATSON PIMM, London, England, assignor of one-half to Joseph Husband, Winnetka, Ill. Filed June 15, 1925. Serial No. 37,385. 2 Claims. (Cl. 281—38.)

1. A method of producing an indexed volume which comprises the binding of the volume, providing the same with a set of index leaves having portions adapted to project beyond the edges of the finished volume, such portions bearing index characters, folding the index leaves to bring the index portion thereof between the



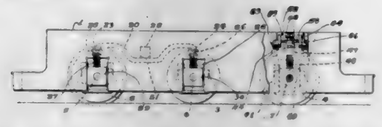
remaining leaves of the volume, trimming the edge of the remaining leaves whereby the unfolding of the index leaves will cause the index bearing portions thereof to project beyond said trimmed edges.

1,559,130. LOCOMOTIVE EQUALIZER. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 8, 1923. Serial No. 679,297. 3 Claims. (Cl. 105—82.)



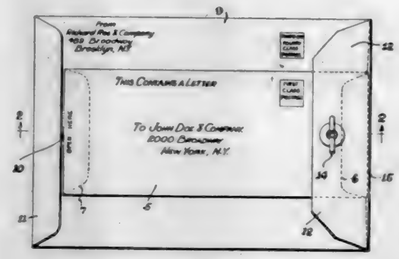
1. In a car, a frame, an axle having supporting wheels, journal boxes adjacent the ends of said axle, guide means on said frame permitting limited vertical movement of said journal boxes, an equalizing device comprising a pair of rocking members each pivotally mounted on said frame at opposite ends of said axle, and means operably connecting said rocking members below their respective axes.

1,559,131. LOCOMOTIVE. WILLIAM W. SLOANE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1924. Serial No. 757,876. 1 Claim. (Cl. 105—82.)



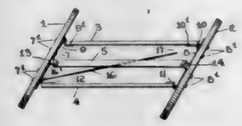
In a locomotive, a frame, three laterally spaced axles having supporting wheels, a transverse equalizing device comprising a pair of rocking members, each pivotally mounted on opposite sides of the frame and affording vertically movable support for one end of one of said axles, horizontally movable means connecting said rocking members together, and a longitudinal equalizing device comprising a pair of bar members adapted for longitudinal movement about a fulcrum support on either side of said frame, each bar member affording a vertically movable support for the respective ends of the other two axles.

1,559,132. DUPLEX ENVELOPE. HENRY TRENCHARD, Brooklyn, N. Y. Filed Nov. 14, 1923. Serial No. 674,598. 4 Claims. (Cl. 229—72.)



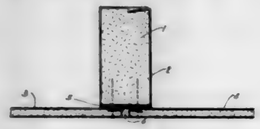
1. A duplex envelope of the character described comprising a larger and a smaller envelope, the smaller envelope having an end flap folded within the open end of the larger envelope and secured to the inner face of the body thereof, the two envelopes being unattached throughout substantially their whole area, the closure flap at the open end of the larger envelope being foldable over the face of the smaller envelope and attachable thereto.

1,559,133. FOLDING REEL. HAROLD B. TUNIS and MATTHEW P. GREENE, Passaic, N. J. Filed July 14, 1925. Serial No. 43,500. 5 Claims. (Cl. 242—115.)



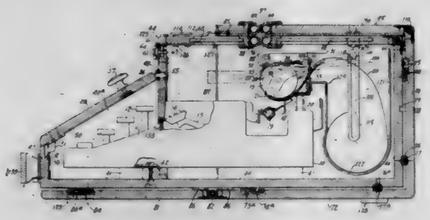
1. In a device of the character described, the combination of two heads, a pair of slats secured to the heads, hinges connecting the slats and the heads and adapted to permit the heads to fold in parallel relation and slats intermediate the said hinged slats and adapted to fold therewith.

1,559,134. WALL CONSTRUCTION. CLARENCE W. UTEMAN, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1923. Serial No. 676,903. 6 Claims. (Cl. 72—16.)



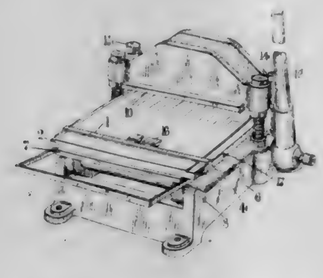
1. A fire resisting wall comprising a backing of gypsum lumber, an adhesive thereon and wall sections secured to the lumber contacting with the adhesive and bonded thereby to the lumber.

1,559,135. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 19, 1921. Serial No. 508,698. 46 Claims. (Cl. 197—186.)



1. A case for a typewriting machine, said case convertible into two closed forms, one form to enclose the machine completely for carrying purposes, and the other form to permit access to the keyboard and provide closed carriage-accommodating extensions when used for sound-deadening purposes; said case comprising a body in which the machine is secured, and members shiftable relatively to the body to convert the case from one closed form to the other closed form, said shiftable members including means for closing in the keyboard and also including means adjustable for affording end room for the travel of the carriage.

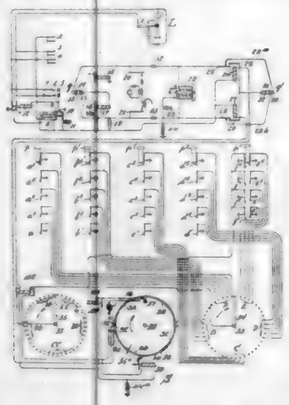
1,559,136. ALIGNMENT BAR AND TYPE PROTECTOR FOR USE IN EMBOSSING MACHINES. GEORGE STANLEY WALPOLE, London, England. Filed Jan. 31, 1924. Serial No. 689,773. 7 Claims. (Cl. 101—3.)



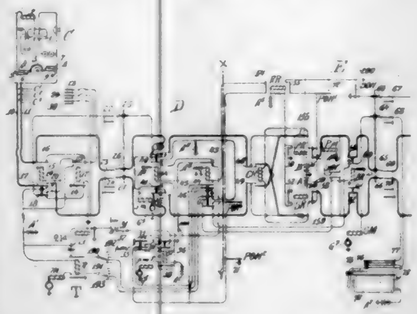
1. An alignment bar for use on embossing machines of the kind described, comprising a metal bar, adapted normally to rest on the platen, and to be removably secured in the correct position thereon by means of lateral members, which serve as abutments for positioning the card when the latter is inserted between the platen and the bar.

1,559,137. TELEPHONE-EXCHANGE SYSTEM. HARRY G. WEBSTER, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed June 10, 1907, Serial No. 378,184. Renewed Oct. 15, 1918. Serial No. 258,288. 84 Claims. (Cl. 179—27.)

1. A telephone system including subscribers' lines, operator controlled selective switches for interconnecting said lines, an operator's impulse transmitter including an electromagnetically adjusted traveling contact member serving to transmit current impulses to operate said switches, and a second electromagnetically adjusted traveling member for said impulse transmitter for controlling the number of impulses transmitted by said first member.

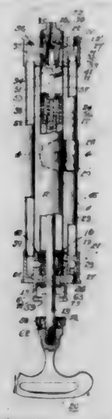


1,559,138. AUTOMATIC TELEPHONE SYSTEM. HARRY G. WEBSTER, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed July 26, 1907. Serial No. 385,674. 66 Claims. (Cl. 179—17.)



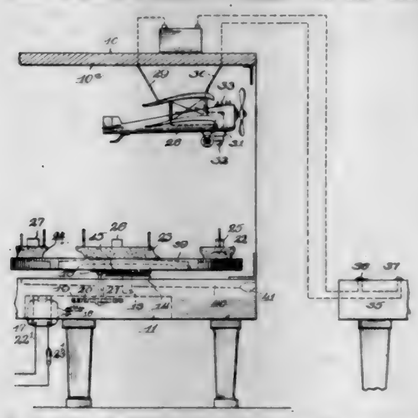
1. An automatic telephone system including a subscriber's line extending by its limbs to the exchange, a pair of serially connected sources of electrical energy at the exchange, a connection from one pole of each source to one limb of said line, a relay for each said connection having its winding in circuit with a line limb, and the respective connection, a third or return conductor connected at the junction point of said sources, switching mechanism at the substation of said line including a connection to said third or return conductor, means for closing the metallic circuit of said line at the substation whereby said relays are energized over said metallic circuit, circuit changing members for said switching mechanism, an actuating device for said members included in said mechanism for operating said members to connect one of the line limbs to said third conductor, whereby the relay of said limb is maintained operated, and thereafter opening the circuit of the other line limb whereby the second relay is de-energized link-circuits, and a selective switch responsive to said relays jointly serving to connect an indifferent idle link-circuit with said telephone line.

1,559,139. PUMPING MECHANISM. PETER L. WILBUR, Tuckahoe, N. Y. Filed Dec. 16, 1921. Serial No. 522,780. 12 Claims. (Cl. 299—97.)



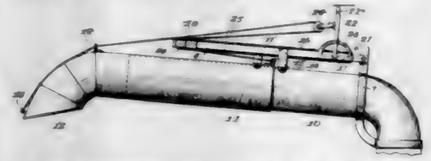
1. In pumping mechanism, a cylinder having a discharge nozzle; a piston reciprocable in said cylinder; valve controlled inlet ports to the cylinder at opposite sides of the piston; outlet ports connected to the nozzle and communicating with the cylinder at opposite sides of the piston; a valve to control the opening and closing of said outlet ports, said piston being arranged to seat said valve to close one of the ports and to close the other port when the piston is in its innermost position to shut off the interior of the pumping mechanism from the atmosphere through the discharge nozzle.

1,559,140. GAME OF SKILL. GUSTAV WOLKENHAUER, Chicago, Ill., assignor to Riverview Park Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 2, 1925. Serial No. 12,474. 5 Claims. (Cl. 273—101.)



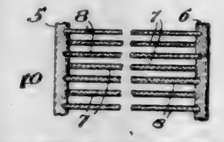
5. A game apparatus comprising a rotative platform, a plurality of miniature vessels arranged at angularly spaced distances in a circle about the rotative center of said platform, the several vessels being provided with stacks of different diameter, a stage on which said platform is mounted, an electric motor for rotating said platform, speed reducing means connecting said motor with said platform, a miniature aeroplane provided with a downwardly directed gun located above said platform with the gun in vertical alignment with one point in the circular path of the stacks of said vessels, an electromagnet associated with said gun, a ball adapted to be retained in said gun by said electromagnet, conductors providing an electric circuit in which said electromagnet is included, a table spaced from said stage, said conductors leading to said table, and switches located on said table and included in said circuit to make and break the same.

1,559,141. OPERATOR FOR BLOWER-PIPE CAPS. LOUIS ADELMEYER, Lomira, Wis. Filed Mar. 14, 1922. Serial No. 543,764. 3 Claims. (Cl. 302—10.)



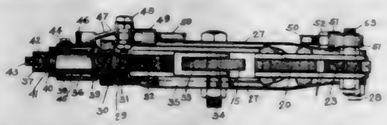
1. The combination with a blower pipe of a threshing machine having a longitudinal section and a longitudinally movable section, a swinging hood carried at the end of the latter, and a bracket carrying means for moving said latter section, of a sheave carrying bracket secured to the outer end of said bracket, a segment having laterally projecting teeth secured adjacent the inner end of said bracket, a lever pivoted to said segment and having a tooth engaging with the teeth thereof, a sheave swingingly carried at an intermediate point on said lever, and a flexible member secured at its outer end to said hood, then passing inwardly over the sheave on said lever, then outwardly over the first mentioned sheave and then inwardly where it is secured adjacent the inner end of the longitudinally movable section whereby said longitudinally movable section can be moved without changing the adjustment of said hood.

1,559,142. PNEUMATIC-TIRE CONSTRUCTION. BURLEE AMES, Lowell, Mass. Filed Sept. 22, 1920. Serial No. 411,949. Renewed Apr. 18, 1925. 14 Claims. (Cl. 139—384.)



9. A cord tire fabric of ladder-like construction comprising a pair of solid bead cords each consisting of interbraided strands, and a series of strands connecting said cords, certain of said strands comprising interbraided filamentous elements.

1,559,143. AUTOMATIC SLACK ADJUSTER. CHARLES OSCAR ANDERSON, Omaha, Nebr., assignor to Anderson Brake Adjuster Company, Omaha, Nebr., a Corporation of Nebraska. Filed Sept. 17, 1923. Serial No. 663,185. 6 Claims. (Cl. 188—202.)

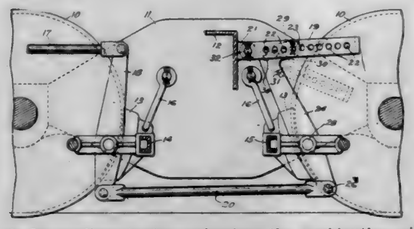


2. Automatic slack-adjusting means for brake-mechanism having a brake-beam and equalizer-beam adjacent to and relatively movable from and toward each other to apply and release the brakes, comprising a brake-lever fulcrumed upon the equalizer-beam, a screw-threaded member connected with the brake-beam and extending therefrom at the side opposite the equalizer-beam, a threaded adjusting-sleeve engaging said screw-threaded

member, a clevis having a head in which said adjusting-sleeve is held revolubly, said clevis having arms straddling the brake-beam and equalizer-beam and pivotally connected with the brake-lever, a clutch-sleeve mounted coaxially with the adjusting-sleeve and frictionally engaged therewith, a lever fulcrumed on the clevis-head and having an arm connected with the clutch-sleeve, and a rod pivotally connected at one end with said lever and at the other end connected loosely with the brake-lever fulcrum-pin, whereby said rod and lever are actuated to rotate the clutch-sleeve during the brake-applying and releasing movements when the relative motion of the brake-beam and equalizer-beam is greater than normal.

---

1,559,144. ADJUSTING MEANS FOR RAILWAY BRAKES. CHARLES O. ANDERSON, Omaha, Nebr. Filed Dec. 12, 1924. Serial No. 755,493. 4 Claims. (Cl. 188—197.)



2. In a railway-brake mechanism, the combination with a truck-bolster, a dead-lever-guide pivoted at one end to said bolster and having a series of fulcrum-pin holes spaced longitudinally thereof, a suspended brake-beam subject to variation in its vertical relation to said bolster, a dead-lever pivoted on said brake-beam and arranged to extend at an incline when one end thereof is adjacent to the pivoted end of said guide, and a fulcrum-pin for connecting said dead-lever and guide; of a head on said end of the lever adjoining the guide, said head having a plurality of fulcrum-pin holes spaced apart laterally of the lever and adapted to register severally with holes in the guide for receiving the fulcrum-pin to connect the lever and guide, whereby the guide may be maintained in adjusted relation to the bolster when the brake-beam varies in vertical relation to the bolster.

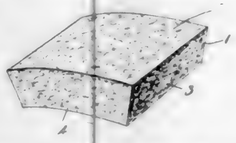
1,559,145. CINEMATOGRAPHY. JARVIS M. ANDREWS, Wollaston, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed Nov. 19, 1921. Serial No. 516,357. 31 Claims. (Cl. 95—89.)

1. The art of forming relief cinematographic films which comprises conditioning a film for the etching process and then flowing etching liquid along the surface of the film.

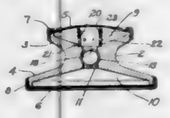
1,559,146. METHOD OF MAKING ARTIFICIALLY-INTEGRATED SHAPED BODIES AND THE PRODUCT OF SAID METHOD. PHILIP A. ANDREWS, Waukegan, Ill., assignor to Johns-Manville, Inc., New York, N. Y., a Corporation of New York. Filed May 7, 1924. Serial No. 711,631. 14 Claims. (Cl. 18—47.5.)



1. The method of making artificially integrated shaped bodies of pressure-resistant and friction-resistant material comprising as steps, mixing in a dry state a fibrous heat-resistant material a comminuted cementitious material capable of reaching a solidified state on reaction with a reagent and a quantity of said reagent insufficient to cause a complete reaction, compacting these materials under pressure, with partial solidification of the cementitious material, into a sufficiently cohesive molded shape, and causing the cementitious material to be reacted upon thereafter to reach a solidified state while maintaining the said molded shape.

---

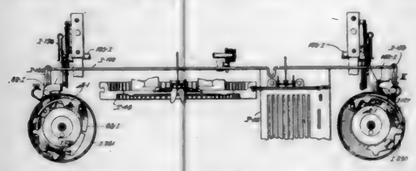
1,559,147. STETHOSCOPE. PETER A. AURNESS, Minneapolis, Minn. Filed Sept. 18, 1922. Serial No. 588,993. 5 Claims. (Cl. 181—24.)



1. A stethoscope comprising a shell having a large diaphragm thereon and a portion having a socket therein to receive an ear tube, a small sleeve mounted on the socket portion in said shell and forming a support between the middle portion of the large diaphragm and said socket portion.

---

1,559,148. RIBBON WINDING AND REVERSING MECHANISM. FREDERICK W. BERNAU, Hillside, N. J., assignor to Ellis Adding-Typewriter Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 19, 1924. Serial No. 687,394. 10 Claims. (Cl. 197—165.)



1. In a ribbon winding and reversing mechanism, the combination with a rotating device for turning a ribbon spool or reel, of means for turning said rotating device with a step-by-step movement, a shiftably mounted controlling member, and an automatic throwout member movably mounted on, and carried by, said controlling member and adapted to move bodily with, or to shift in relation to, said controlling member, said throwout member being adapted for operation by means carried by the ribbon to shift it and being cooperatively related to the aforesaid means for turning the rotating device so that when the aforesaid throwout member is moved by the action of the means carried by the ribbon, it will shift the means for turning the rotating device, and a ribbon cup adapted to be engaged by the means for turning the rotating device when the latter is thus shifted by the throwout member, said ribbon cup serving as a fulcrum, whereby the action of the ribbon will then cause the controlling member and the throwout member to be shifted to effect a cooperation of the turning means aforesaid with the said rotating device.

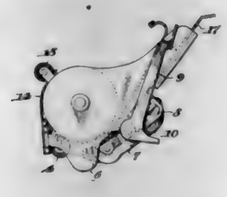
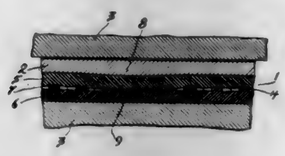
1,559,149. DUPLEX PAPER TABLE. FREDERICK W. BERNAU, Detroit, Mich., assignor to Ellis Adding-Typewriter Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 12, 1925. Serial No. 1,894. 1 Claim. (Cl. 197—128.)



The combination with a cylindrical platen, and with the usual main paper table or deck which has an inclined part and a curved or trough-like part extending forwardly underneath the platen and to the front side thereof, of a supplemental or additional paper table or deck of substantially the same length as the main table or deck supported above the main paper table or deck by end spacers disposed between the decks, said supplemental paper table being of appreciably less height than the usual main table or deck, said upper, supplemental deck comprising an inclined part and a trough-like part, respectively, disposed wholly above the inclined and trough-like parts of the main table in spaced, but close, relationship thereto throughout their extent, and between them and the platen, the trough-like part of the supplemental paper table extending to the front side of the platen, and paper rolls for holding the paper against the platen the spaced relationship of the upper and lower tables providing an unobstructed chute therebetween, down which the paper may be fed by gravity to said rolls, the upper part of the main paper table being exposed above the upper edge of the supplemental table, whereby introduction of papers between the tables is facilitated.

---

1,559,150. MEANS FOR THE TREATMENT OF PRINTING PLATES. EDWIN A. BORDEN, Oak Park, Ill. Filed Sept. 13, 1923. Serial No. 662,422. 10 Claims. (Cl. 101—401.3.)



1. An article of manufacture for the treatment of printing plates consisting of a sheet of permanently resilient material having a displacement space providing pattern therein of a depth less than the thickness of the sheet, said sheet being adapted when placed under pressure on the back of a printing plate for conforming the printing face of the plate and to return to normal shape when the pressure is released, said pattern localizing displacement of the solid portion of the sheet.

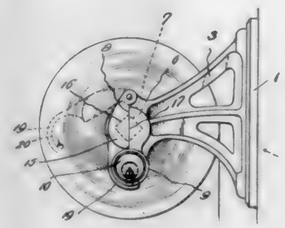
1,559,151. ROLL HOLDER. LOUIS F. BRASCH, Newark, N. J. Filed July 25, 1924. Serial No. 728,165. 2 Claims. (Cl. 211—31.)



1. A device of the class described comprising a plate member, a pair of supporting arms extending from one side thereof in parallel spaced relation, each of said arms being formed with sockets, and a roll carrying member removably mounted in the sockets of said arm having a shaft formed with a plurality of radially extending tubular projections arranged in spaced pairs, each pair of projections being formed with aligned slots, a plurality of blades mounted in the respective aligned slots of each pair of projections, and adapted for relative radial movement to said shaft, securing pins mounted in said tubular projections and extending through slots formed in the blade for limiting the radial movement of said blades in the projections, and coil springs interposed between the inner edges of the blades in the bottom of the tubular projection, for normally projecting the blades outwardly from the shaft for engagement with the inner periphery of the roll.

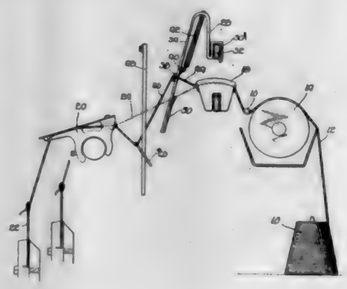
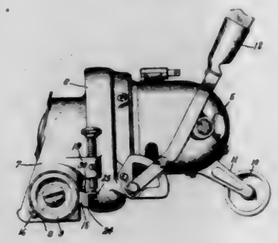
1,559,152. SAFETY THREAD CONTROL. ROBERT BREUER, Milwaukee, Wis., assignor to The Phoenix Hosiery Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1921. Serial No. 525,082. 4 Claims. (Cl. 66—12.)



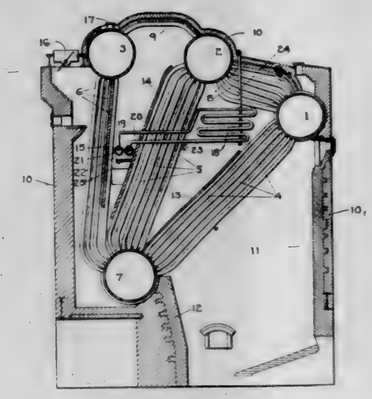
4. A tension operated thread cutter comprising, in combination, a cutting element and thread guide mounted to permit relative movement between the thread and the cutting element, resilient means tending to produce separation of the cutting element and thread, and conveying means utilizing thread tension to overcome the action of said resilient means and keep the thread and said element in proximity until the thread is cut by the element.

1,549,153. VACUUM CLEANER. OTTO BRINTZENHOFF, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Filed Aug. 7, 1922. Serial No. 579,977. 2 Claims. (Cl. 15—16.)



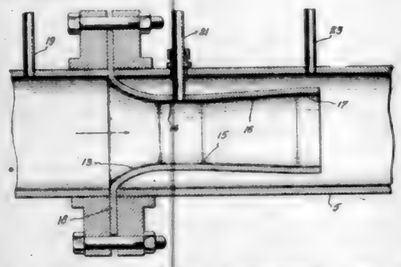
1. The combination with a vacuum cleaner having a suction nozzle with front, rear and end walls, of means for supporting the nozzle in adjustable spaced relation to a surface over which said nozzle is operated, said means being located exteriorly of the nozzle and comprising a frame member having a transverse portion which extends along and closely adjacent the rear wall of the nozzle and end portions which extend forwardly along and closely adjacent the end walls of the nozzle, said frame being pivoted at its ends to the end walls of the nozzle adjacent the front edges of said walls, a traction wheel at each end of the nozzle rotatably mounted on the frame end portions in coaxial relation to each other, a lug integral with and projecting rearwardly of the nozzle above the frame, and an adjusting bolt carried by said lug and pivotally connected to the frame.

1,559,154. BOILER WITH SUPERHEATER. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 6, 1922. Serial No. 534,478. 5 Claims. (Cl. 122—478.)



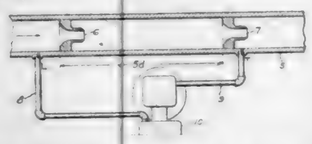
1. In apparatus of the class described, the combination of a boiler having a front, a middle, and a rear upper drum and a lower drum and three banks of water tubes connecting the three upper drums to the lower drum; superheater elements in the space between the front and the middle banks of tubes; and superheater headers in the space between the middle and rear banks; the elements being connected to the headers by portions extending between rows of tubes in the middle bank.

1,559,155. MULTIRANGE FLOW NOZZLE. CHARLES F. BULLOCK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,276. 7 Claims. (Cl. 73—167.)



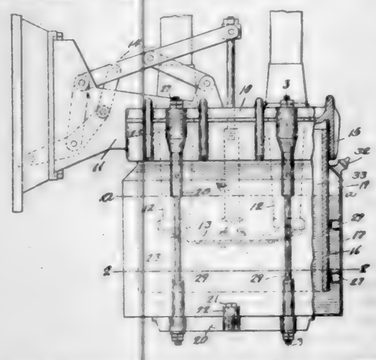
6. A flow tube comprising a converging section followed by successive straight and flaring sections, said straight sections having lengths equal to at least substantially one-fourth of their own diameters, and said flaring sections diverging from the straight section in advance of it at an angle not greater than five degrees.

1,559,156. ORIFICE-TYPE PRESSURE-DIFFERENCE-CREATING DEVICE FOR FLOW METERS. CHARLES F. BULLOCK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,780. 3 Claims. (Cl. 73—167.)



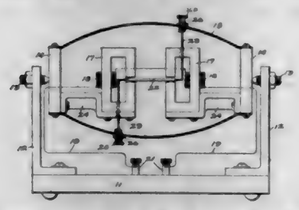
1. The combination with a pipe of a pressure difference creating device therein comprising a plurality of individual pressure difference creating devices of the orifice type spaced approximately five pipe diameters apart.

1,559,157. ELECTRIC SWITCH. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed Jan. 29, 1920. Serial No. 354,020. 3 Claims. (Cl. 200—150.)



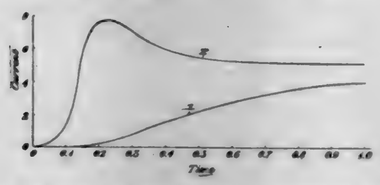
1. An oil receptacle for electric switches comprising a unitary structure having outer and inner walls peripherally spaced from each other arranged to form a closed top outer chamber and an open top inner chamber in communication below the oil level in the receptacle and means removably to secure the receptacle yieldingly to an electric switch.

1,559,158. SOUND-EMITTING DEVICE. JOHN HENRY BUTCHER, Rugby, and ARTHUR PRIMROSE YOUNG, Kenilworth, England, assignors to General Electric Company, a Corporation of New York. Filed Dec. 11, 1923. Serial No. 679,974. 7 Claims. (Cl. 179—115.)



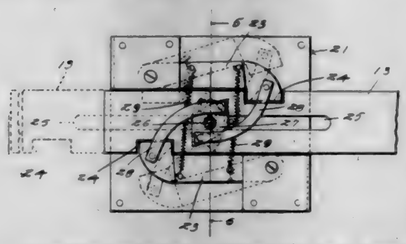
1. The combination in a sound emitting device of a hollow casing which serves as a diaphragm and an actuating mechanism enclosed in said casing and attached to opposite sides thereof.

1,559,159. TELEGRAPH SIGNALING SYSTEM. JOHN R. CARSON, Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 7, 1920. Serial No. 394,510. 9 Claims. (Cl. 178—63.)



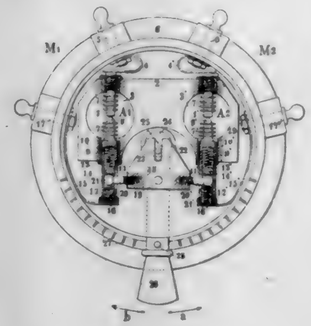
1. The method of signaling over a transmission circuit characterized by great distortion, which consists in superimposing a sinusoidal voltage upon a direct current voltage, and impressing the resultant voltage upon the said transmission circuit at the instant when the sinusoidal voltage is of the predetermined phase to produce at the receiving end of the said circuit an arrival wave having a relatively steep front.

1,559,160. LOCK MECHANISM. LOUIS E. CARTER, St. Joseph, Mo., assignor of one-fourth to Fred W. Cornell, St. Joseph, Mo. Filed May 24, 1923. Serial No. 641,161. 8 Claims. (Cl. 70—46.)



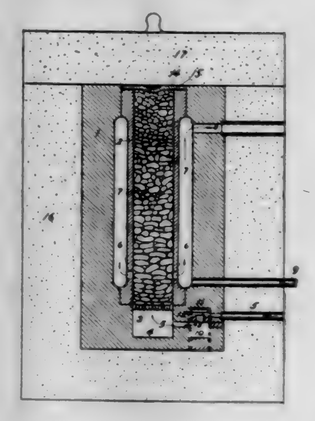
1. In locking mechanism, a sliding bolt, dogs disposed upon opposite sides of the bolt and adapted to engage the same and hold it in locking position, a spindle adapted to be operated by hand or key, and a link connection between said spindle and the dogs.

1,559,161. RESTORER OF NORMAL IGNITION FOR DUAL IGNITION APPARATUS OF INTERNAL-COMBUSTION ENGINES. JULES COURTIER, Paris, France. Filed July 31, 1923. Serial No. 654,879½. 8 Claims. (Cl. 123—148.)



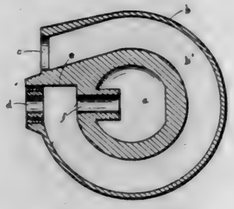
8. An auxiliary apparatus for internal combustion engines having dual ignition comprising two pairs of conducting members inserted one in the first and the other in the second high tension circuit, a control member to operate the said conducting member, means by which the said control member operates the said conducting members for closing simultaneously the two high tension ignition circuits or for inserting in one of the two circuits spark gaps in series in a regulable manner.

1,559,162. STOVE FOR BOILING PURPOSES. GUSTAF DALÉN, Skarsatra, Stockholm, Sweden, assignor to Svenska Aktiebolaget Gasaccumulator, Stockholm, Sweden. Filed Mar. 6, 1924. Serial No. 697,411. 8 Claims. (Cl. 126—1.)



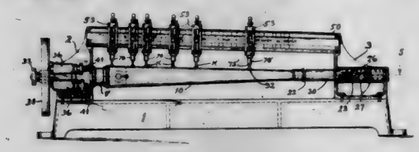
1. In a boiling stove, a heat accumulator in the form of a metal block, a fuel receiver, a fire place in communication with the receiver and with said block, means for admitting combustion air to the fire place, an annular chamber provided between the receiver and the block for receiving products of combustion from the fire place, and means for exhausting the products of combustion from the chamber.

1,559,163. OIL BURNER. GEORGE CARLETON GEROW, Ottawa, Ontario, Canada, assignor of eight-twentieths to William Joseph Press, one-twentieth to William C. Arnold, one-twentieth to James Lewis Kemp, and two-twentieths to Edith Press, all of Ottawa, Canada. Filed Jan. 16, 1925. Serial No. 2,808. 2 Claims. (Cl. 158—28.)



1. An oil burner comprising a combustion bowl, a jacket surrounding the bowl and forming therewith an enclosed annular chamber, a baffle extending from the combustion bowl to the jacket, an oil inlet through the jacket at one side of the partition and in juxtaposition thereto, an inlet through the wall of the combustion bowl in line with the oil inlet and an air inlet through the wall of the jacket at the other side of said partition and in juxtaposition thereto, whereby the air entering through the air inlet is compelled to circulate around the bowl to a locus between the oil inlet into the annular chamber and the inlet from the annular chamber into the interior of the combustion bowl and is carburetted before passing from the annular chamber into the interior of the combustion bowl.

1,559,164. KNOB-POSITIONING MACHINE FOR MUSICAL INSTRUMENTS. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Nov. 11, 1922, Serial No. 600,238. Renewed Apr. 9, 1925. 27 Claims. (Cl. 113—99.)

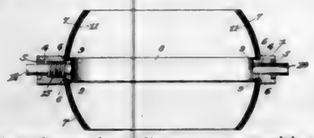


1. In a machine of the character described, the combination with a support for a tapering instrument body to be provided with projections, positioning devices for retaining said projections at predetermined points on said body, and a common support for said positioning devices, said common support being inclined with respect to the axis of the instrument body and the support of the body.

1,559,165. ARTICLE OF JEWELRY. FLORENCE I. HAMMOND, Chicago, Ill. Filed Aug. 11, 1923. Serial No. 656,859. 4 Claims. (Cl. 63—3.)

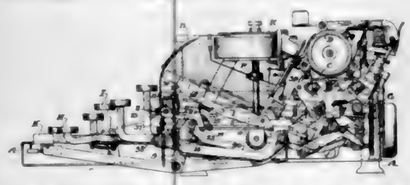
2. An article of jewelry comprising a band adapted to embrace a portion of the body of the wearer, said band having a polygonal plate mounted thereon, a plurality of eyes punched out of the stock of said plate, said eyes projecting outwardly from and substantially perpendicular to the plate, and a plurality of pendants freely linked to said eyes and capable of having motion in all directions, but limited by each other and by said polygonal plate.

1,559,166. VARIABLE TRANSFORMER. ROBERT J. HEITZMAN, Union Hill, N. J. Filed June 28, 1922. Serial No. 571,450. 5 Claims. (Cl. 171—119.)



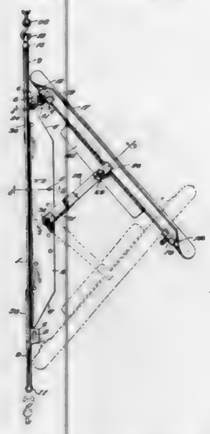
1. A transformer for radio systems comprising a stator including a supporting ring having annular shoulders on its opposite faces and coil sections each having the contour of a segmental spherical shell with its initial turns only engaging the shoulder on the corresponding ring face, and all of its turns rigidly united by an adhesive binding medium; and a rotor including a similar ring and coil sections; and means for pivotally connecting the stator within the rotor.

1,559,167. TYPEWRITING MACHINE. EDWARD B. HESS, New York, LEWIS C. MYERS, Freeport, and GEORGE F. HANDLEY, Glendale, N. Y., assignors to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 11, 1924. Serial No. 755,181. 30 Claims. (Cl. 197—22.)



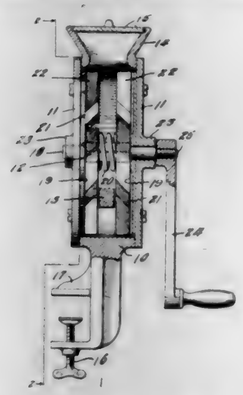
1. In a typewriting machine, a type action comprising a type bar, a key lever, a pivoted horizontal front link, a connection between the free end of the front link and the type bar, and a sliding connection between the key lever and the upper edge of the front link intermediate its ends.

1,559,168. GRADER. GROVER C. HILL and JAMES H. TAYLOR, Owensboro, Ky. Filed June 17, 1924. Serial No. 720,578. 7 Claims. (Cl. 37—173.)



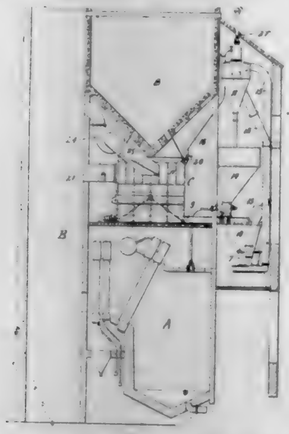
1. In a grader, the combination of a blade, a landside, a vertically extending rib upon the rear side of the blade at the end thereof, a bracket secured upon the landside, and a coupling yoke connected to the bracket by a vertical pivot and to the said rib by a horizontal pivot.

1,559,169. EGGSHELL CRUSHER AND PULVERIZER. EDWARD W. HIRSCHMAN, Findlay, Ohio. Filed July 3, 1924. Serial No. 724,099. 6 Claims. (Cl. 83—8.)



1. An egg-shell crusher and pulverizer including a crushing chamber, crushing means therein including a pair of revolving hammers and a stationary break-down bar between which the shell is adapted to be broken up into flakes during revolution of the hammers, a pulverizing member for each hammer presenting a corrugated surface over which the blades of the hammers are adapted to move, the corrugations of the member serving to catch and hold the flakes of the shell propelled there against by the blades of the revolving hammer and the said blades being inclined to strike the grooves at an angle to obtain a shearing cut, and elastic means tending to force the said hammers against the said corrugated surfaces of the said pulverizing members.

1,559,170. PULVERIZING APPARATUS. GEORGE P. JACKSON, Flushing, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed May 19, 1923. Serial No. 640,030. 8 Claims. (Cl. 83—11.)



1. The combination with a substantially closed pulverizing and air separating system, a screen composed of material to be pulverized, and means for venting the system through such screen.

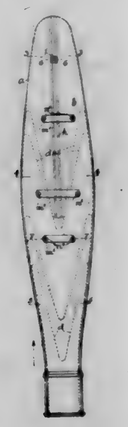
1,559,171. GAME. EDWARD G. KNOWLES, New York, N. Y. Filed Apr. 14, 1923. Serial No. 631,961. 13 Claims. (Cl. 273—102.)

1. In a shooting game, the combination with a box having a lid, of scenic members and members representing animate objects, said members being mounted on said box and said scenic members having certain dimensions greater than certain dimensions of said box whereby they are adapted, when said lid is opened, to be expanded beyond the confines of the box, said objects being exposed so as to be struck by a projectile from the front of the game, and said scenic members having other dimensions less than certain dimensions of said box whereby they are adapted to be collapsed within said box and lid when closed.

1,559,172. SHUTTLE AND PICKER CHECK FOR LOOMS. ALPHONSE LECOMTE and ADELARD L'ARCHEVEQUE, Fall River, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 25, 1925. Serial No. 39,476. 8 Claims. (Cl. 139—170.)

1. A shuttle and picker check for a loom having a lay, a picker stick and a shuttle box with a rear binder pivoted at the end of the lay comprising a slide bar mounted on the lay to slide longitudinally thereof and having a projection in the path of the picker stick, a spring interposed between the lay and the slide bar, acting to move the slide bar inward, and a bell crank lever fulcrumed on the lay and having its longer arm extending inward with its free end in the path of the pivoted binder and having its shorter arm extending outward and provided with a friction facing engaging the slide bar, whereby a relatively small force transmitted by the shuttle to the binder as it enters the shuttle box is transformed into a relatively large force acting to check the endwise movement of the shuttle through the picker stick without increasing the force required to pick the shuttle out of the shuttle box.

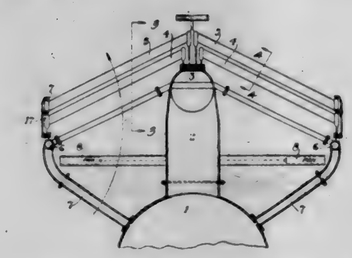
1,559,173. SCREW PROPELLER. HENRY LEITNER, London, England. Original application filed Oct. 20, 1923, Serial No. 669,750. Divided and this application filed July 17, 1924. Serial No. 726,597. 2 Claims. (Cl. 170—159.)



1. A screw-propeller of the type hereinbefore referred to, wherein the face or back plate of each plate of each blade is formed with one or more longitudinal corrugations substantially as, and for the purpose, specified.

---

1,559,174. CONDENSER FOR LOCOMOTIVES. FREDRIK LJUNGSTRÖM, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Apr. 13, 1922. Serial No. 552,425. 3 Claims. (Cl. 257—25.)

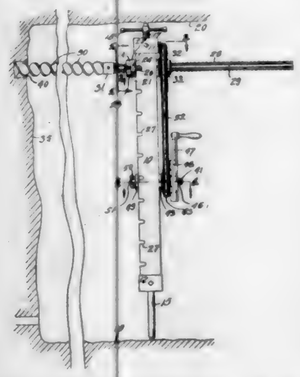


1. A condenser for locomotives consisting of cooling elements located side by side, fans for forcing air between said elements, said cooling elements being arranged in groups and said groups arranged in rows one above the other, means forming channels between the several groups whereby separate currents of air are supplied to the different groups.

---

1,559,175. MINE DRILLING MACHINE. ISAIAH S. MARSHALL, Des Moines, Iowa. Filed Jan. 21, 1925. Serial No. 3,774. 1 Claim. (Cl. 255—46.)

In a drill of the kind described, an upright frame, means for securing the frame between a floor and a roof, a bearing structure mounted on the frame for vertical adjustment thereon, a threaded rod mounted in said bearing in screw-threaded cooperation therewith, a drill secured to said rod, a screw-threaded sprocket mounted on said rod, said sprocket and rod having a non-rotatable sliding connection as well as the screw-threaded connection, a second sprocket below the first sprocket in alignment therewith, a chain and sprocket means for operating said second sprocket, and means for adjustably mounting the second sprocket on the frame, said means comprising a shaft on which the second sprocket



is mounted having a reduced end, plates on said reduced end spaced from each other for receiving the frame between them, and means for locking said plates on said frame.

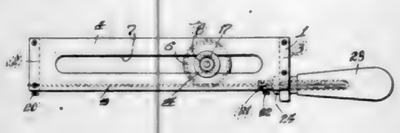
---

1,559,176. DEXTROSE HYDRATE. WILLIAM B. NEWKIRK, Riverside, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 16, 1924. Serial No. 732,558. 6 Claims. (Cl. 127—30.)

6. Crystalline dextrose consisting of separate hydrate crystals substantially unimpaired as to their crystalline structure, but containing less than the normal quantity of water of crystallization.

---

1,559,177. VALVE GRINDER. CHARLES W. OGLE, St. Louis, Mo. Filed Mar. 24, 1921. Serial No. 455,033. 6 Claims. (Cl. 51—29.)



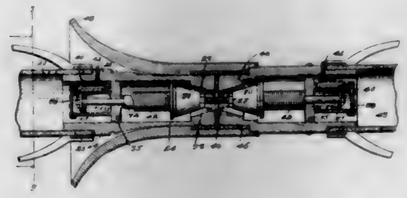
1. In an operating tool holder, a reciprocable guiding member, a turnable element located in said member having its axis slidingly supported thereby, said element adapted to support a tool, and means secured adjacent each end of said member co-operable with said element for turning said element in alternate directions when said member is reciprocated.

---

1,559,178. AUTOMATIC COUPLING FOR PNEUMATIC TRAIN PIPES. MILE PODNAR, Des Moines, Iowa. Filed Sept. 12, 1923. Serial No. 662,244. 4 Claims. (Cl. 284—5.)

1. In combination with one end of a train pipe, a coupling plug, a bell shaped coupling member, means for yieldably mounting each of said members spaced apart and parallel with each other in such a manner that when two cars equipped with said device are connected together in operative relation, the plug member of one car will enter the bell shaped member of the opposite car,

each of said members being provided with an air passage communicating with the main train pipe and in communication with each other when in coupled relation, means



in each of the bell shaped members and plug members for automatically closing the communicating openings through them, and means for retarding the action of said closing means.

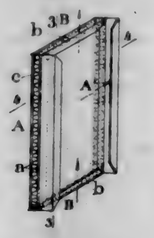
---

1,559,179. METHOD FOR ELIMINATION OF IRON FROM SOLUTIONS OF LEUCITIC ROCKS. UMBERTO POMILIO and FRANCESCO GIORDANI, Naples, Italy, assignors to Pomilio Brothers Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1922. Serial No. 584,384. 5 Claims. (Cl. 204—9.)

1. In a process of treatment of leucitic rocks, the steps of attacking them with acid, removing the silica from the solution so formed, and precipitating the iron from said solution by electrolysis, substantially as set forth.

---

1,559,180. HEAT EXCHANGER. EMILE PEAT, Paris, France. Filed Aug. 18, 1925. Serial No. 51,027. 1 Claim. (Cl. 257—166.)



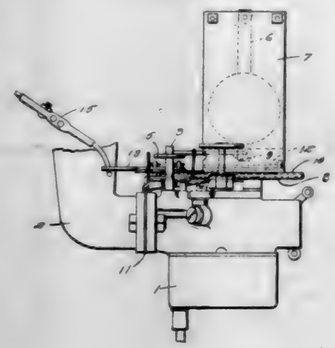
A heat exchange device for the transfer of heat from one fluid to another comprising a plurality of elements each consisting of a pair of spaced plates, channel irons overlapping two opposed edges of said plates, resilient spirals between the plates positioned to hold the plates in contact with the inner surfaces of said channels so as to provide a passage for one of the fluids, and other channel irons placed between the unobstructed edges of the plates of adjacent elements to form a passage for the other fluid at substantially right angles to the first passage.

---

1,559,181. AUTO AUTOMATIC SPEED REGULATOR. WILLIAM S. REYNOLDS, Redding, Calif. Filed Nov. 6, 1924. Serial No. 748,800. 4 Claims. (Cl. 137—139.)

2. Means for automatically regulating the speed of a vehicle, the same consisting of a pendulum connected with the throttle of the engine to automatically open or close the same depending upon the load incident to ascending or descending a grade, and a frame carrying said pendulum adjustably mounted relatively to the throttle operating means.

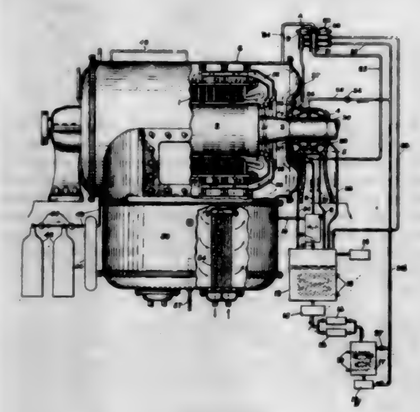
8. An automatic speed regulator of the character specified comprising a support, a frame slidable upon the support, a pendulum carried by the frame, connecting



means between the pendulum and throttle, and means under control of the driver for adjusting the pendulum frame and holding the same in the required adjusted position.

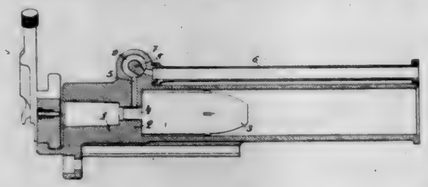
---

1,559,182. DYNAMO-ELECTRIC MACHINE. CHESTER W. RICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 23, 1923. Serial No. 676,647. 18 Claims. (Cl. 171—252.)



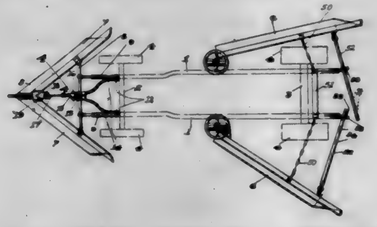
1. In combination, a dynamo electric machine having a rotatable member mounted on a shaft, a casing co-operating with the dynamo electric machine to form a closed circuit for the circulation and recirculation of gas lighter than air for cooling said machine, means forming a liquid seal for preventing the escape of gas from said casing, said seal comprising a chamber surrounding said shaft and containing a liquid for preventing the escape of gas from said casing, a second chamber also surrounding said shaft, said second chamber being located between said first mentioned chamber and said rotatable member, and a drain connected to said second chamber through which said liquid flows by gravity whereby the excess liquid is removed and said liquid prevented from entering said machine.

1,559,183. TUYÈRE WITH VARIABLE OUTPUT FOR CANNON. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges & Acieries de la Marine et d'Homecourt, Paris, France. Filed July 13, 1925. Serial No. 43,355. 6 Claims. (Cl. 89—1.)



1. In a cannon, a powder chamber arranged at the rear part thereof, a bore for the travel of the projectile, a partition between the said chamber and the said bore, a tuyère arranged in the said partition and connecting the said chamber and the said bore, a projection at the rear of the projectile which may be engaged in the said tuyère, an outlet conduit formed in the said partition and opening into the wall of the tuyère and means for regulating the output of the said conduit.

1,559,184. SNOWPLOW. CHARLES S. ROBBINS and EDWARD B. COBURN, Worcester, Mass. Filed June 17, 1924. Serial No. 720,577. 10 Claims. (Cl. 37—44.)

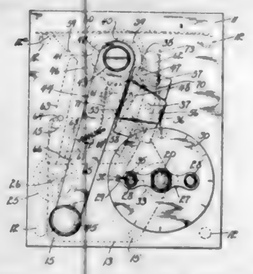


1. In apparatus for removing snow, a vehicle, a wing plow pivotally attached at its front end to said vehicle for movement about a vertical axis, the full weight of said front end of said plow being carried by said vehicle, said plow being further pivotally mounted at substantially the same place for movement about a horizontal axis, said plow being held rigidly about its own longest dimension as an axis, and adjustable means at substantially the rear end of said plow holding it outwardly from said vehicle.

1,559,185. HEADLIGHT REFLECTOR. CHARLES L. SAMS, Bridgeport, Ohio, assignor of one-half to Henry C. Cilles, jr., Bridgeport, Ohio. Filed Mar. 20, 1924. Serial No. 700,650. 1 Claim. (Cl. 240—41.)

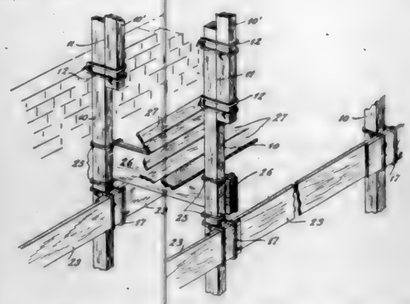
A headlight reflector made in a single piece of substantially the same thickness throughout the reflector having a substantially round opening at the front thereof and a lamp hole at the rear thereof, said opening extending from the base of the reflector to a line substantially extending through the axis of said hole, the reflector extending upwardly and rearwardly along an unbroken curve directly from the front thereof, and the reflector curving downwardly and forwardly at its lower portion from the rear to said opening.

1,559,186. TIMING MECHANISM. JOHN A. SCOTT, Dedham, Mass., assignor to The Sentinel Mfg. Co., New Haven, Conn., a Corporation. Filed Feb. 20, 1924. Serial No. 693,991. 11 Claims. (Cl. 161—1.)



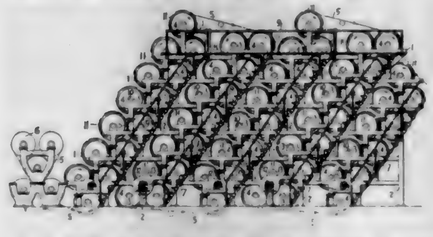
1. In a timing mechanism, the combination with a time-movement, of setting means therefor, an ultimate operator, a manual for moving the same in one direction, yielding means for reversely moving the same, and connections between the said elements constructed and arranged to permit the operator to be manually set in an advanced position or in an intermediate position, with respect to its normal position, and to be automatically moved after a predetermined length of time from its advanced position to its intermediate position, or from its intermediate to its normal position, whereby the said mechanism may be utilized for automatically effecting either of two movements predetermined by the operator at the time of setting the device.

1,559,187. SCAFFOLDING CONSTRUCTION. WILLIAM E. SEXTON, Long Island City, N. Y. Filed Aug. 25, 1922. Serial No. 584,170. 8 Claims. (Cl. 304—40.)



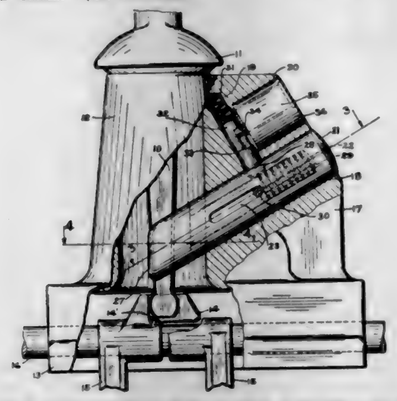
1. A clamp for scaffolding comprising complemental U-shaped sections each having parallel legs and a cross-leg connecting said parallel legs at one end, connecting members extending transversely to and between opposed parallel legs of said sections at opposite ends thereof to fix the sections in spaced relation said connecting members comprising integral parts of said parallel legs, and screws mounted in and passing through some of said legs and having their inner ends adapted to bear against elements to be clamped together to thereby create outward pressures whereby said clamp is caused to exert its clamping function.

1,559,188. PAPER DRIER. CHARLES W. SHARTLE, Middletown, Ohio, assignor to The Shartle Brothers Machine Company, Middletown, Ohio. Filed June 9, 1924. Serial No. 718,828. 3 Claims. (Cl. 34—48.)



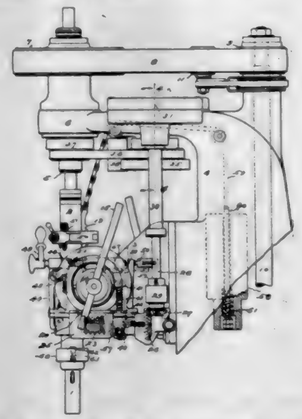
1. A paper drier, including in combination, a series of drier units each comprising a plurality of sets of drier rolls, arranged one set above another in parallel horizontal planes, horizontally opposite rolls of the unit being operable in contra-directions and adapted to be traversed in a serpentine path by a paper web.

1,559,189. GEAR-SHIFT-LEVER LOCK. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Filed May 13, 1920. Serial No. 381,146. 1 Claim. (Cl. 70—128.)



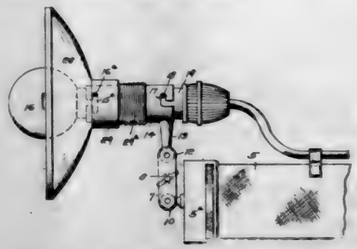
In a gear shift lever lock, a lever supporting bracket having a hollow portion, a gear shift lever pivoted at the upper portion of said bracket and having its lower end extending into said hollow portion to engage the shifting devices, said bracket having a solid enlarged portion at one side of the lever provided with an inclined face adjacent its upper part and having an inclined bore extending from said face into the hollow portion of the bracket, a plunger movably mounted in said bore, said bracket having a second bore in the inclined face thereof parallel to and above the first bore, and a third bore extending in a downward direction along the bottom of the second and terminating in the first named bore, a spring pressed bolt slidably mounted in said third bore and adapted to engage the plunger, a lock mounted in the second bore and having a lost motion connection with said bolt whereby the latter is free to move downwardly into engagement with the plunger, and said plunger having its inner end bifurcated to engage the lever adjacent the lower end when said plunger is moved inwardly and downwardly in its bore, the bifurcated end of said plunger having its face inclined to lie in a substantially vertical plane parallel with the lever when the latter is in neutral position, said spring pressed bolt moving to locking position in a downward direction whereby it is actuated by gravity as well as by its spring.

1,559,190. DRILL PRESS. CURTIS F. SHERMAN, Hartford, Conn., assignor to The Henry & Wright Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 31, 1923. Serial No. 683,677. 19 Claims. (Cl. 77—33.)



1. In a drilling machine in combination with the rotatory and reciprocatory tool spindle and means for rotating the spindle, of a rack and pinion for reciprocating the spindle, a worm wheel connected with the pinion shaft, a worm engaging the worm wheel, means driven from the spindle for rotating the worm, and means operable automatically and by hand for engaging the worm with the worm wheel and disengaging the worm from the worm wheel and effecting the feed and cessation of feed of the spindle.

1,559,191. HEADLAMP DEVICE. CHESTER H. SMITH, Pittsburg, Kans. Filed Mar. 31, 1925. Serial No. 19,677. 1 Claim. (Cl. 240—59.)

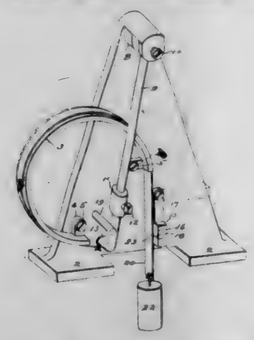


A device of the character described comprising a curved metallic plate having slotted portions, a headband having threaded engagement in said slotted portions, a spherical element rigidly affixed to the headband, a lamp socket, an arm extending laterally from the lamp socket and rigidly affixed thereto and carrying a spherical element at its end, a pair of spaced bars having semispherical recesses in their confronting faces receiving the spherical elements of the lamp and plate respectively to constitute a universal joint, a reflector and a threaded mounting for said reflector with respect to the lamp socket.

1,559,192. APPARATUS FOR DEMONSTRATING GRAVITY ACCELERATION. DAVID G. SMYTH, Hartford, Conn. Filed Apr. 6, 1925. Serial No. 21,156. 7 Claims. (Cl. 35—12.)

1. A gravity acceleration apparatus comprising a frame, a ledge extending outward from the face of the frame, a pendulum supported by the frame and adapted

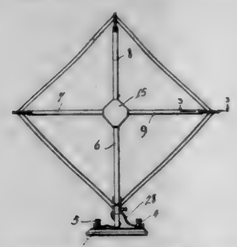
to swing across its face, a plummet, a flexible strip loosely passing over the ledge and having one end connected with the plummet and the other end connected with the pendulum whereby the plummet through said strip tem-



porarily holds the pendulum at one side of the center of its path of oscillation, and means carried by the pendulum and adapted to engage and mark said strip when the latter is severed and the plummet is allowed to drop and the pendulum allowed to swing.

---

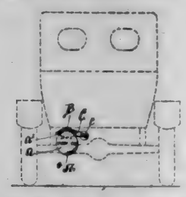
1,559,193. FOLDING-LOOP ANTENNA. MAURICE W. STAVRUM, ROBERT L. OLSON, and WALLACE H. BERRY, Chicago, Ill. Filed Aug. 25, 1924. Serial No. 734,021. 5 Claims. (Cl. 250—33.)



1. A loop antenna of the character described comprising a folding frame, combs carried by said frame, and a plurality of turns of wire bank-wound upon said combs.

---

1,559,194. COMBINED AUTOMOBILE SIGNALING AND ADVERTISING DEVICE. LAWRENCE HILL STEELE, Vaughn, Ga., assignor of one-half to John Wimbish Guinn, La Grange, Ga. Filed Dec. 1, 1924. Serial No. 753,274. 2 Claims. (Cl. 116—52.)



1. An automobile signal comprising a plate adapted to be attached to an automobile, a signal arm pivoted upon the back of the plate and adapted to swing outwardly beyond the edge of the plate into exposed position and to swing down behind the plate out of sight, said arm having an angular extension at its pivot end, a lever pivoted to the lower portion of the plate at said side and having an under arm extending upwardly into proximity to the pivot of the signal arm, an L-shaped link pivotally connected at one end to the angular extension of the signal arm, and at its other end extending upwardly and pivotally connected to the upper end of said lever, a bracket carried upon said plate about the lower end of said lever and having an out turned plate at its lower edge, a bell crank lever pivoted at its angle upon said plate and having one end pivotally connected to the lower end of said lever and below the pivotal support thereof, and a flexible connection to the other end of said bell crank lever, whereby a pull on said connection is adapted to swing said bell crank lever, swing the upper end of the upwardly extending lever and move the signal arm into exposed position, the weight of said signal arm being adapted to return said parts to normal position, said angled shaped link being adapted to maintain the pivotal connections of the angled extension of the signal arm and the long lever at all times out of a dead center position.

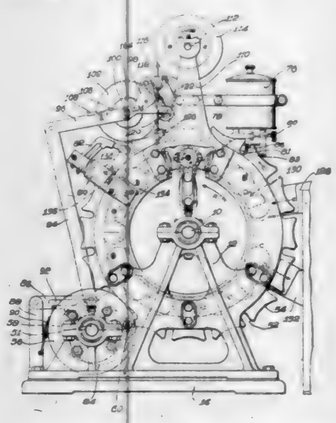
1,559,195. MACHINE FOR SOLDERING. LOUIS H. STEIN, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1921. Serial No. 501,572. 12 Claims. (Cl. 113—59.)



1. In a device of the class described, a rotatable carrier having a peripheral annular slot, means for delivering an article by gravity to said slot, and projections from the walls of said slot arranged to engage said article and cooperate with the bottom of the slot to support the article and carry it away from said delivery means.

---

1,559,196. VULCANIZING RUBBER. GEORGE H. STEVENS, Newark, N. J. Filed June 25, 1923. Serial No. 647,765. 12 Claims. (Cl. 18—53.)

1. A process of vulcanizing rubber which consists in, incorporating a vulcanizing agent with rubber, then under heat, accelerating vulcanization in the presence of tetratolyltricarbodiimide in the rubber mixture.

---

1,559,197. VULCANIZING RUBBER. GEORGE H. STEVENS, Newark, N. J. Original application filed June 25, 1923, Serial No. 647,765. Divided and this application filed Jan. 26, 1925. Serial No. 4,958. 12 Claims. (Cl. 18—53.)

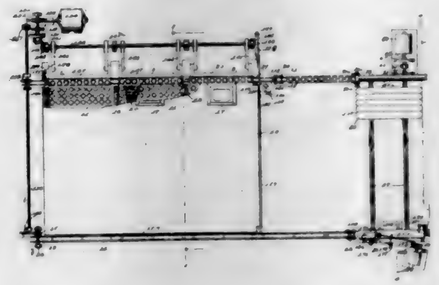
1. A process of vulcanizing rubber which consists in, incorporating a vulcanizing agent with rubber, then under heat, accelerating vulcanization in the presence of tetraxyliltricarbodiimide in the rubber mixture.

1,559,198. VULCANIZING RUBBER. GEORGE H. STEVENS, Newark, N. J. Original application filed June 25, 1923, Serial No. 647,765. Divided and this application filed Jan. 26, 1925. Serial No. 4,959. 9 Claims. (Cl. 18—53.)

1. A process of vulcanizing rubber which consists in, incorporating a vulcanizing agent with compounded rubber, then under heat, causing the formation of tetraphenyltricarbodiimide within the rubber mixture while effecting vulcanization.

---

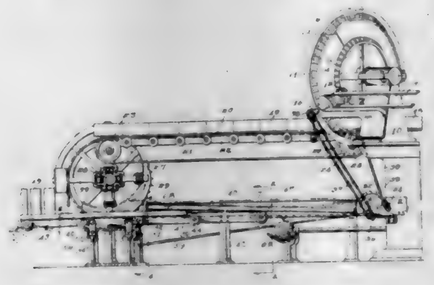
1,559,199. MECHANISM FOR HANDLING TILE-BEARING PALLETS. HALVER R. STRAIGHT, Adel, Iowa. Filed Sept. 25, 1923. Serial No. 664,713. 16 Claims. (Cl. 214—18.)



1. In combination with the off-bearing mechanism of a tile cutter and a drier kiln provided with an inlet and outlet opening, a stack of pallets, means for successively advancing the pallets from said stack to a receiving position on said off-bearing mechanism, a stacking mechanism, means for advancing the pallets to position in front of said inlet openings, means for advancing the pallets through said kiln through the outlet openings, means for advancing the pallets from said outlet opening to said stacking mechanism, and means for advancing the stacks of pallets to the first said operator position.

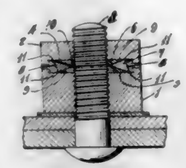
---

1,559,200. PALLET-FEEDING MECHANISM. HALVER R. STRAIGHT, Adel, Iowa. Filed June 1, 1925. Serial No. 34,054. 10 Claims. (Cl. 25—110.)



1. In combination, a tile cutter, an off-bearing mechanism, a pallet accumulating device, means for receiving a pallet from said accumulating device and feeding it intermittently beneath the discharge end of said off-bearing mechanism.

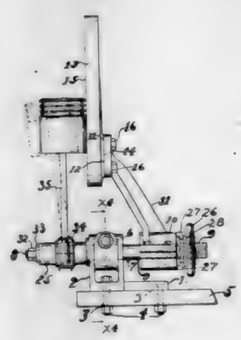
1,559,201. LOCK NUT. ALFRED A. TEEPLE, South Plainfield, N. J. Filed May 11, 1925. Serial No. 29,512. 3 Claims. (Cl. 151—1.)



1. A lock nut comprising complemental threaded members having recesses in their abutting faces, and a disk of soft metal seated in said recesses and normally thicker than the combined depth thereof compressed into frictional engagement with the walls of the recesses and the threads of the bolt by relative movement of said members toward each other, and means within the disk aforesaid to direct the movement of the metal thereof towards said walls and threads.

---

1,559,202. COMBINED PISTON-ALIGNING AND BEARING-FITTING FIXTURE. HJALMAR THOMASON, Los Angeles, Calif., assignor to Shepard-Thomason Co., Los Angeles, Calif. Filed Feb. 15, 1921. Serial No. 445,217. 5 Claims. (33—180.)



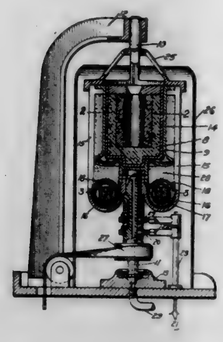
1. A jig for aligning a piston with its connecting-rod bearing; comprising a shaft; means for supporting said shaft intermediate its ends; the opposite ends of said shaft extending co-axially on opposite sides of said supporting means and independent of other supports so as to form spindles; means to lock said shaft in said supporting means; and an arm mounted on one of said spindles and adjustable therealong and rotatable thereon and having a face extending in a plane at right angles to the produced axis of said spindles; the other of said spindles being adapted to allow a connecting-rod bearing to be freely slid thereon.

---

1,559,203. PROCESS OF AND APPARATUS FOR PURIFYING FUSIONS. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 1, 1925. Serial No. 34,086. 5 Claims. (Cl. 49—78.1.)

1. The process of removing suspended particles from materials forming viscous fusions which consists in

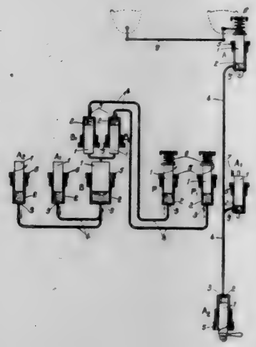
fusing said materials, subjecting the fusion to centrifugal force sufficiently great to segregate said particles in



one portion of the fusion, allowing the fusion to solidify and mechanically separate the part of the mass containing the impurities from the purified remainder.

---

1,559,204. MEANS FOR ORIENTING AUTOMOBILE HEADLAMPS. JEAN THOREL, Louviers, France. Filed Feb. 5, 1924. Serial No. 690,864. 4 Claims. (Cl. 240—61.)

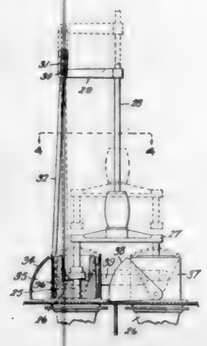


1. In an apparatus of the character described, a dirigible head-light, fluid pressure operable means for actuating said head-light, fluid displacing means operable by the vehicle steering gear, manually operable fluid displacing means operable independently of the first displacing means, and a fluid conduit connecting the several fluid displacing means with the fluid pressure operable means.

---

1,559,205. ELECTRIC SWITCH. HENRY TRENCHAM, Ruislip, England, assignor to General Electric Company, a Corporation of New York. Filed Nov. 6, 1923. Serial No. 673,089. 3 Claims. (Cl. 200—162.)

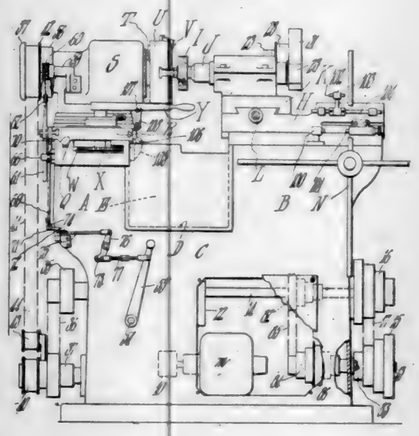
1. Electric switch gear of the type having the live parts immersed in an insulating liquid characterized by the fact that a grounded screen is provided within the liquid between the live parts and other parts of the gear



when it is desired to render the latter dead and free from leakage currents.

---

1,559,206. GRINDING MACHINE. FREDERICK D. VAN NORMAN, Springfield, Mass. Filed Feb. 20, 1920. Serial No. 360,096. 22 Claims. (Cl. 51—95.)



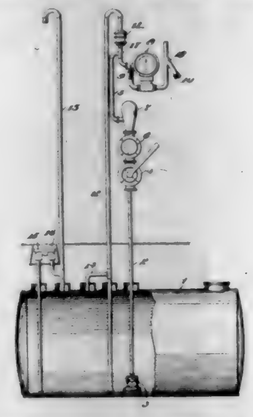
1. In a grinding machine, aligned rotary work-holding and tool-holding devices, quick acting means to move one of said devices into offset relation with the other, driving means for said movable devices including means associated with the driving means to maintain a uniform driving connection therewith throughout its range of movement.

---

1,559,207. APPARATUS FOR DELIVERING MEASURED QUANTITIES OF LIQUID. WILLEM CARL VAN RINGELENSTEIN and THEODORUS RIEL, The Hague, Netherlands. Filed Jan. 15, 1925. Serial No. 2,570. 4 Claims. (Cl. 221—80.)

1. Apparatus for delivering measured quantities of liquid having in combination with a pump, a low level liquid container, and a meter or gauge which registers the flow of liquid and gaseous fluids, a device, which

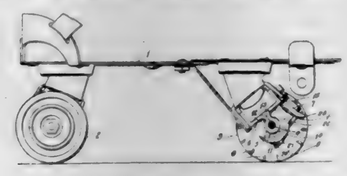
affords an outlet for gaseous fluid from the pump conduit leading to the meter but which automatically closes said outlet when said conduit is filled with liquid, and



means whereby the outlet is automatically opened when the liquid pressure in the conduit exceeds a predetermined value.

---

1,559,208. DOUBLE RATCHET FOR ROLLER SKATES. LUI C. VERGANO, Berkeley, Calif. Filed Mar. 5, 1924. Serial No. 697,072. 7 Claims. (Cl. 208—179.)



1. A roller skate having the front wheels thereof provided with ratchet teeth, a bracket secured to the skate between said wheels and occupying an upwardly and forwardly inclined position, pawls pivoted to said bracket and extending downwardly and forwardly therefrom, and a spring urging the pawls into the paths of said ratchet teeth.

---

1,559,209. HORSE COLLAR. WILLIAM VISSER, Lovilia, Iowa. Filed Apr. 25, 1924. Serial No. 708,893. 1 Claim. (Cl. 54—18.)

A horse collar comprising a pair of similar halves formed of wood, said halves having their under surfaces shaped to conform to the neck and shoulders of the horse, a strap and buckle connection at the upper ends of said halves, and their lower ends being formed with flat surfaces, said halves being capable of having their lower ends swing apart for permitting the halves to be used as a collar upon horses of various sizes, hame receiving flanges formed on said halves, hames on said flanges and a hame strap for retaining the halves of the collar in proper position.

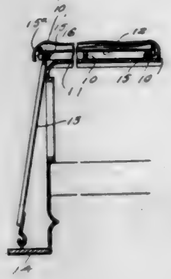
---

1,559,210. VANITY-CASE HOLDER. LESLIE O. WETHERELL, Attleboro, Mass., assignor to Freeman-Daughaday Company, Chartley, Mass., a Corporation of Massachusetts. Filed July 18, 1925. Serial No. 44,457. 1 Claim. (Cl. 24—3.)

A holder for a vanity case comprising a plate of sheet material, an arm struck out from within the margin thereof for engaging a garter or the like to press the same against the plate, diametrically opposite fingers on the edge of said plate extending outwardly at substantially right angles thereto and located at substantially the horizontal center and slightly thereabove, inturned lips on the ends of said fingers between which and said plate a circular shaped vanity box may be snapped and gripped, the upper peripheral edge of said plate being free from box engaging fingers and a portion extending outwardly from the bottom of said plate to serve as a stop to limit the movement of said box in being slid in a plane substantially parallel to said plate from the top thereof to a position under said lips.

---

1,559,211. AUTO CAMP-COT TENT. LUCIAN A. WINGATE, Fort Myers, Fla. Filed June 14, 1924. Serial No. 720,111. 5 Claims. (Cl. 5—119.)

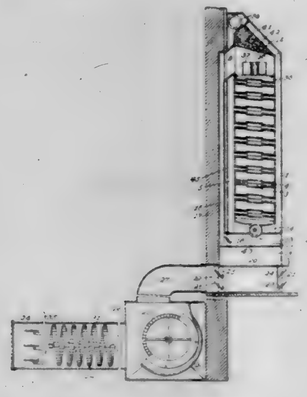


1. A folding cot for the use of campers, the same comprising supporting bars pivotally connected at one end to the running board of an automobile, and a cot frame pivotally connected at its outer side to the outer ends of the supporting bars and adapted to rest upon the latter when the cot is extended.

1,559,212. REFLECTOR FOR HEADLIGHTS. OVERTON WINSTON, Minneapolis, Minn. Filed May 3, 1920. Serial No. 378,481. Renewed May 18, 1923. 36 Claims. (Cl. 240—41.)

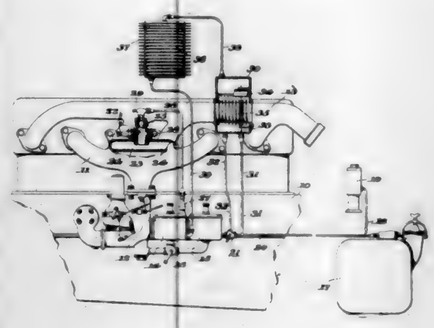
1. A headlight set for approximately horizontal projection and comprising a reflector and a light source therein, said reflector having a surface substantially corresponding to a surface generated by a conic revolved in a downward direction on the approximately horizontal axis of the conic while increasing, at the same time, both its radial distance from said axis and the distance from said light source of its vertex or point of intersection with said axis, the major portion of the upper part of said surface being the reverse of the corresponding major portion of the lower part of said surface.

1,559,213. HEATING APPARATUS. JOHN W. WINTERBOTTOM and RALPH F. WINTERBOTTOM, Waterloo, Iowa. Filed Apr. 17, 1922. Serial No. 554,101. 6 Claims. (Cl. 257—135.)



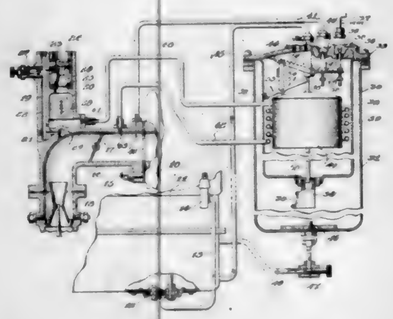
1. In heating apparatus, a distributing chamber in communication with a controllable source of air under pressure, hollow radiator elements assembled together and in circulatory communication with each other and with a source of fluid supply under pressure and with a desired temperature, hollow air-conduit elements assembled with said radiator elements in communication at one end with said distributing chamber and having delivery vents at the other end, a by-pass leading from said distributing chamber into the communicating parts of the air-conduit elements adjacent said delivery vents, means for controlling adjustably said by-pass, said distributing chamber also having controllable means of communication with the surrounding atmosphere, and said radiator elements being of winding shape with their inter-winding spaces in communication with said air-conduit elements.

1,559,214. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 1, 1920. Serial No. 407,443. 5 Claims. (Cl. 123—127.)



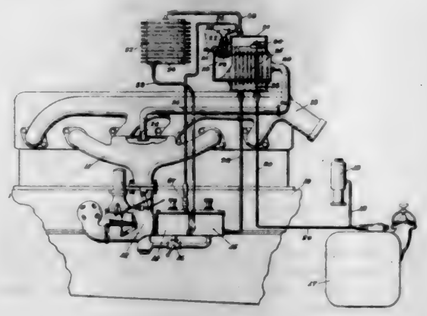
1. In a hydrocarbon motor, the combination with the motor intake conduit, the carburetor connected thereto, a combustion heater also connected to the intake conduit, and a fuel supply, of a still connected to said fuel supply, and a condenser connected to the still and adapted to supply fuel to the carburetor and to the combustion heater.

1,559,215. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 1, 1922. Serial No. 572,151. 17 Claims. (Cl. 123—196.)



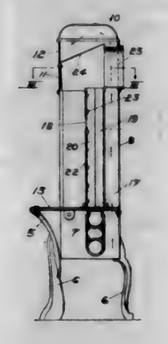
1. A method of refining the lubricating oil of an internal combustion engine consisting in subjecting the oil to sub-atmospheric pressure and simultaneously to heat controlled by the engine suction.

1,559,216. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Sept. 1, 1920, Serial No. 407,443. Divided and this application filed Feb. 6, 1925. Serial No. 7,266. 7 Claims. (Cl. 123—127.)



6. In an internal combustion engine, the combination of an engine cylinder, a still, and a combustion heater operated by the engine and adapted to heat said still.

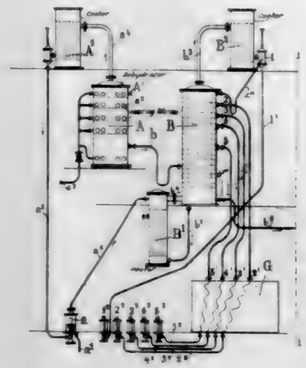
1,559,217. HEATING STOVE. FRANK YOKEL, Avalon, Pa. Filed Dec. 22, 1923. Serial No. 682,192. 5 Claims. (Cl. 126—92.)



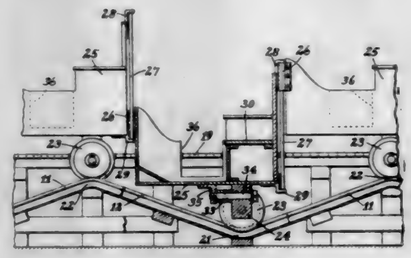
1. A stove comprising a casing, a plurality of burners in the lower part thereof, and a pair of vertical plates mounted over the burners having separated oppositely pressed vertical ribs therein, the ribs of one plate registering with those of the other whereby vertical hollow columns are formed, one of said columns being disposed over each burner, the ribs of the plates being separated by intervening flat areas whose inner faces contact.

1,559,218. PROCESS OF CONTINUOUS RECTIFICATION OF SPIRITS, PETROLEUMS, AND BENZOLS. EMILE AUGUSTIN BARBET, Paris, France. Filed June 25, 1918. Serial No. 241,841. 9 Claims. (Cl. 196—73.)

1. The continuous process for the distillation of a mixture of volatile liquids having different boiling points, which comprises supplying heat to the mixture to vaporize the lower boiling constituents thereof at atmospheric pressure, condensing the vapours thereby formed, interrupting the supply of heat to the residual liquid and subjecting it while in a heated state to a pressure below that of the atmosphere, subjecting the vapours thereby formed to fractionation and subjecting the liquid residue from this operation to multiple effect evaporation in vacuo with the application of heat.

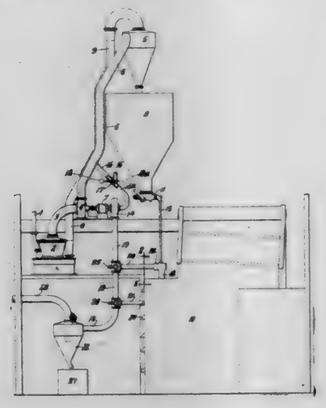


1,559,219. AMUSEMENT DEVICE. FRANK V. BURROW, Los Angeles, Calif. Filed Aug. 26, 1924. Serial No. 734,204. 2 Claims. (Cl. 272—44.)



1. An amusement device comprising a circular track consisting of a pair of concentric rails having alternate upward and downward bends to simulate waves, an endless series of connected cars adapted to travel on said track, each of said cars corresponding in length to the semi-wave lengths of said track, slidable connecting means between adjacent cars of said series which maintain all of said cars in a horizontal position, a plurality of driving arms having their outer ends pivotally connected to occasional cars in said series and their inner ends pivotally connected to a common drive wheel, a vertical shaft to which said drive wheel is keyed, means for operatively connecting said vertical shaft with a motor so that it is rotated thereby, and a circular platform surrounding said track for use when entering or leaving said cars.

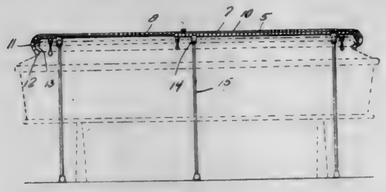
1,559,220. PULVERIZING SYSTEM. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignor to Locomotive Pulverized Fuel Company, a Corporation of Delaware. Filed Jan. 12, 1922. Serial No. 528,667. 8 Claims. (Cl. 83—9.)



1. A pulverizing system provided with a pulverizer, and an air conveyor disposed between the pulverizer discharge and an inlet of said pulverizer, and positively acting means for exhausting air from said conveyor when the air in said conveyor becomes excessive.

---

1,559,221. FLOWER RACK. VERL CARPENTER, Lancaster, Ohio. Filed Feb. 21, 1925. Serial No. 10,820. 3 Claims. (Cl. 27—36.)



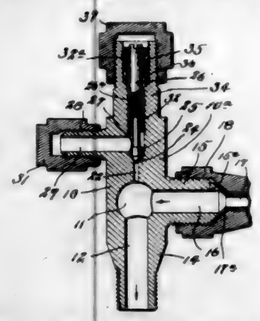
1. In a rack of the class described, a frame formed from a plurality of telescopic bars, fingers pivoted on the ends of the bars, and springs engaged between the fingers and the bars for tending to hold said fingers toward the casket or the like.

---

1,559,222. CHARGING VALVE. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey Rotary Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 4, 1924. Serial No. 747,863. 8 Claims. (Cl. 251—43.)

3. A valve fitting for refrigerating systems comprising a single piece casting provided with an outlet adapted to be secured to the inlet port of a refrigerating system, an intake tubular portion adapted to receive the return-pipe of said system, said casting being provided with a circulation passage communicating with said outlet and intake connections, a tubular extension formed integral with said casting and communicating with said circulation passage, said extension being adapted to be connected to an exhausting and charging apparatus, and a manipulative valve for controlling the communication between said exhausting and charging extension and said circulation passage.

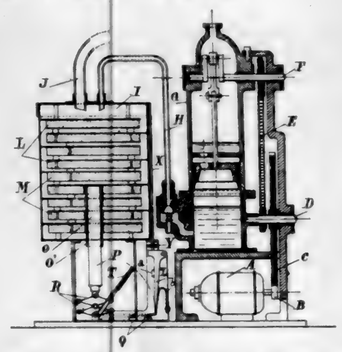
8. A charging, exhausting, and circulating refrigeration fitting comprising a casting provided with an integral circulation passage and a plurality of tubular extensions, one of which is adapted to be connected to a charging



and exhausting device, a valve-controlled bore connecting said circulation passage and said charging and exhausting extension, and a detachable cap for sealing said charging and exhausting extension.

---

1,559,223. DOMESTIC REFRIGERATING APPARATUS. FERNAN O. CONILL and MICHEL DE LÉZINIER, Marseilles, France. Filed Aug. 17, 1922. Serial No. 582,452. 3 Claims. (Cl. 62—153.)



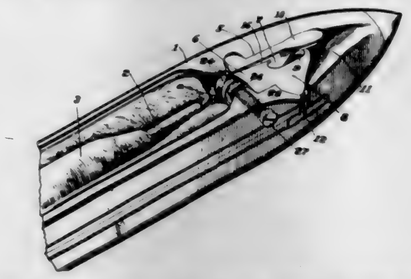
1. A domestic refrigerating apparatus for the production of ice and thoroughly cooled water, comprising a vertical cylindrical vacuum chamber provided with a plurality of coaxially disposed and superposed plate shaped receptacles containing permanently solid water vapor absorbing material, a vacuum pump for creating a vacuum in the said chamber, a pump driving gears, a bottle containing the water to be cooled, means to support and tightly connect the said bottle with the said vacuum chamber, an electric heating element for heating the chamber and thus drying the vapor absorbing material contained therein, and means for automatically arresting the drying operation.

---

1,559,224. THREAD TENSION FOR AUTOMATICALLY THREADING LOOM SHUTTLES. EDWARD A. CUNNIFF, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 6, 1925. Serial No. 41,533. 5 Claims. (Cl. 139—217.)

1. In an automatically threading loom shuttle, the combination of a threading block having a longitudinally extending threading passage and an undercut

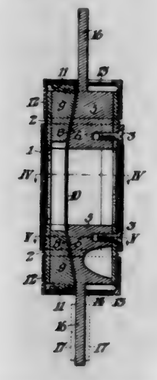
chambered portion formed in the block adjacent the bobbin chamber, two disks within the undercut chambered portion of the threaded block provided with con-



vex surfaces arranged face to face below overlying portions of the block, and a threaded bolt passing transversely through the chambered portion of the threading block on which the disks are mounted.

---

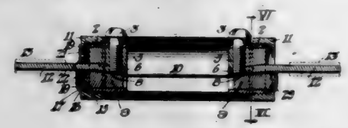
1,559,225. ELECTRICAL FUSE. HOWARD DAVIES, Philadelphia, Pa. Filed Oct. 21, 1919. Serial No. 332,213. 9 Claims. (Cl. 200—132.)



1. In an electrical fuse structure; the combination with a cylindrical tubular casing of insulating material, having internal screw threads at its opposite ends; of metallic screw nipples threaded in said casing at its opposite ends; means fastening said nipples in said casing, including respective screws extending radially through said casing and nipples; substantially semi-cylindrical metallic terminal members held in said nipples by said screws and having their inner faces extending in planes which are oblique to the axis of said casing, affording respective wedge abutments; wedges respectively axially movable in said casing in opposition to said wedge abutments, having their inner faces respectively inclined parallel with the inclined faces of said abutments; said wedges having means to facilitate their withdrawal including grooves in the respective wedges extending obliquely with respect to the axis of said casing in the perimeters of said wedges; whereby said wedges are adapted to clamp a fuse strip between them and their respective abutments; screw caps respectively fitted to the outer ends of said nipples; cap washers, fitted in said caps in opposition to the outer ends of said wedges, and having respective openings for electrical conductors; electrical conducting elements, respectively in integral relation with said wedge abutments and adapted to extend through the openings in said cap washers; said conducting elements being formed as plane blades which are held in alinement with each other by said abutments; and a fuse strip extending in said casing, but clamped by said wedges, having its opposite ends extending through said cap washers.

---

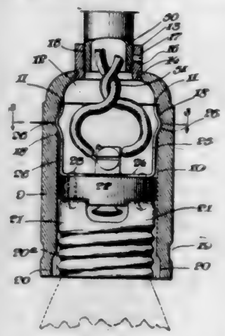
1,559,226. ELECTRICAL FUSE. HOWARD DAVIES, Philadelphia, Pa. Filed Jan. 26, 1920. Serial No. 354,175. 13 Claims. (Cl. 200—132.)



1. In an electrical fuse structure; the combination with a cylindrical tubular casing of insulating material, having screw threads at its opposite ends; of metallic screw nipples at said ends; means fastening said nipples, including respective elements extending radially through said casing and said nipples; substantially semicylindrical metallic terminal members held in said nipples by said fastening means and having their inner faces extending in planes which are oblique to the axis of said casing, affording respective wedge abutments; wedges respectively axially movable in said casing in opposition to said wedge abutments, having their inner faces respectively inclined parallel with the inclined faces of said abutments; whereby said wedges are adapted to clamp a fuse strip; said wedges having means to effect their withdrawal, including members projecting from the ends thereof; screw caps respectively fitted to the outer ends of said nipples; each having an inwardly projecting annular flange; said caps having respective openings for electrical conductors; electrical conducting elements, respectively extending from said wedge abutments, formed as plane blades which are held in alinement with each other by said abutments; and a fuse strip extending in said casing, having its opposite ends clamped by said wedge members.

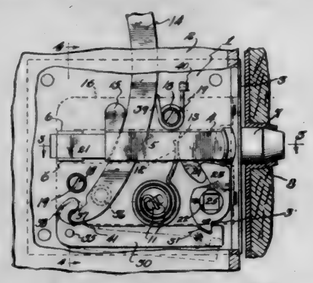
---

1,559,227. LAMP-SOCKET FIXTURE. FRANK LOUIS DE LA POTTERIE, Brooklyn, N. Y. Filed Sept. 9, 1924. Serial No. 736,732. 11 Claims. (Cl. 173—358.)



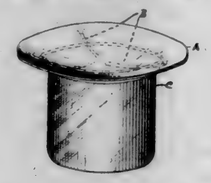
1. A lamp socket fixture comprising a shell having an opening at its lower end, a threaded lamp socket insertible into the shell and removable herefrom through said opening, and spring means carried by said socket and engageable with the shell for releasably securing the socket within the shell, said shell extending upwardly above the socket a substantial distance to form between said socket and the upper end of said shell a compartment of substantial size.

1,559,228. DOOR LOCK. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Dec. 26, 1923. Serial No. 682,782. 12 Claims. (Cl. 292—169.)



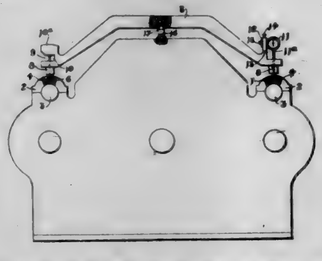
1. In a lock, the combination with a case plate and a movable bolt on the case plate, of a rotatable member on the case plate adapted to actuate the bolt, a trigger on the case plate for holding said rotatable member against movement, an extension on the trigger, a projection on the trigger, and a lever having an extension alternately engageable with the extension and projection aforesaid to move said trigger into and out of locking engagement with said rotatable member.

1,559,229. LABORATORY CONTAINER COVER. BERT P. DOPPER, Detroit, Mich. Filed May 23, 1924. Serial No. 715,428. 8 Claims. (Cl. 215—56.)



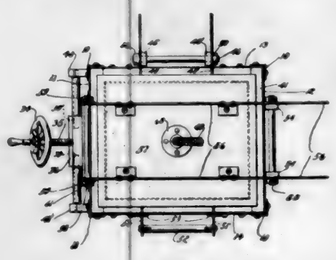
1. A cover for a container provided with spaced integral ribs on its under surface, adapted to rest upon the top edge of a container of equal or lesser diameter, thereby providing a venting space between the otherwise meeting surfaces.

1,559,230. ALIGNING METER FOR LAND AND MARINE GEARS AND SHAFTS. WILLIAM ECCLES, Chorltoncum-Hardy, England, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 22, 1921. Serial No. 439,117. 8 Claims. (Cl. 33—84.)



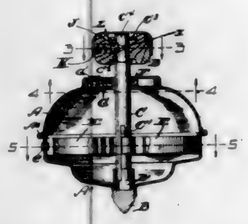
1. An instrument for indicating the deviation from a coplanar condition of two substantially parallel shafts, comprising a beam provided with three bearing or support points, one of which is arranged to abut against a fixed point adjacent the shafts under test whilst two are arranged to respectively engage said shafts at points on lines inclined to the axes of said shafts, at least one of said bearing or support points being adjustable.

1,559,231. APPARATUS AND METHOD FOR CASTING ELECTROTYPES. ALPHONZO B. ECKERSALL, Chicago, Ill. Filed Aug. 23, 1924. Serial No. 733,742. 32 Claims. (Cl. 22—123.)



11. A casting apparatus of the character described including an adjustably mounted backing plate having removable raised edges, means for heating the backing plate, and means for maintaining a shell on the backing plate against deformation during casting operations.

1,559,232. SPINNING TOP. JOHN J. ESPER, Dearborn, Mich. Filed May 31, 1924. Serial No. 717,026. 4 Claims. (Cl. 46—32.)



4. In a device of the character described, a body portion, a rotatable, longitudinally movable spindle mounted in the body portion, a helical spring connected at one end with the body portion and at the other end with a spindle, ratchet mechanism for holding the spring under tension while being manually wound by the spindle, a knob permanently mounted on the upper end of the spindle, and clutch mechanism for clutching the knob to the spindle when the knob is manually rotated for winding the spring, said clutch mechanism being arranged to unclutch the spindle from the knob when the spindle is actuated by the spring.

1,559,233. STOCKING SUPPORTER. ADA M. EUSTER, Pineville, Ky. Filed July 7, 1925. Serial No. 41,993. 2 Claims. (Cl. 2—240.)

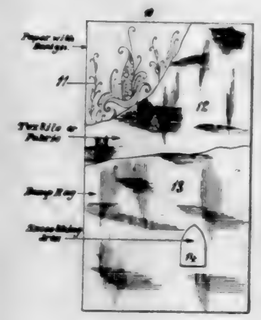
1. In combination, a stocking having its upper terminal portion provided with a pocket opening at the outer side of said portion, a strap slidably mounted in said pocket and having the end portions thereof extended outwardly from the pocket, means carried by the strap and the upper terminal portion of the stocking for detachably securing the strap in adjusted position, and means carried by one of the projecting end portions of

the strap and engageable with the upper terminal portion of the stocking for limiting the shifting movement in one direction of the strap.

1,559,234. SMOKER'S STAND. ROBERT G. FLEMING, Bloomfield, N. J., assignor to Smokador Manufacturing Co., Inc., New York, N. Y., a Corporation of Delaware. Continuation of application Serial No. 587,899, filed Feb. 20, 1922. This application filed Feb. 21, 1925. Serial No. 10,734. 17 Claims. (Cl. 131—51.)

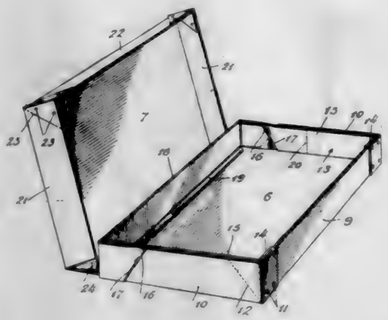
1. A rockable smoker's stand including, in combination, a chamber for receiving smoker's waste and a relatively long, waste conducting passageway leading to said chamber, the waste receiving mouth of said passageway being at a height convenient for deposit of waste, and a foot having rocker faces on which the stand is adapted automatically to rock toward erect position when tilted therefrom.

1,559,235. PROCESS OF PRINTING ON TEXTILES, FABRICS, AND THE LIKE. JOHN FOLK, New York, N. Y. Filed Jan. 22, 1925. Serial No. 3,993. 4 Claims. (Cl. 41—33.)



1. The process of printing on textiles, fabrics and the like, consisting in printing a design, legend or configuration upon a base, locating the textile or fabric upon the printed face of the base and bearing against its design, locating a damp sheet of material upon said textile, fabric and the like, pressing the three elements together and simultaneously heating them.

1,559,236. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Oct. 23, 1924. Serial No. 745,271. 3 Claims. (Cl. 229—41.)

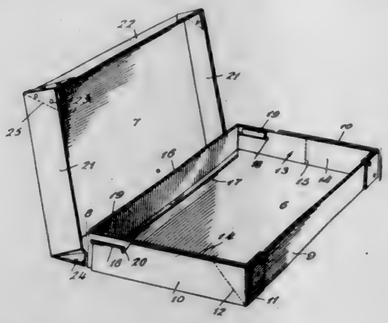


1. In a collapsible box, a bottom section including side walls provided with notches therein, and a collapsible reinforcing inner lining for said section also having side walls provided with notches therein, the first named notches being capable of receiving portions of said lining adjacent the second named notches whereby the side walls of said section and lining are interlocked when the latter is in extended position.

1,559,237. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Oct. 23, 1924. Serial No. 745,272. 2 Claims. (Cl. 229—41.)

1. In a collapsible box, a bottom section including a front wall, side walls attached thereto, and an inner foldable lining secured to said front wall and including side walls and an intermediate portion forming the rear

wall of said section, the side walls of said lining being provided with longitudinal slots adjacent said intermediate portion of said lining, and the rear ends of the side



walls of said section terminating short of said intermediate section and being provided with upwardly projecting flaps insertable through the slots in said lining.

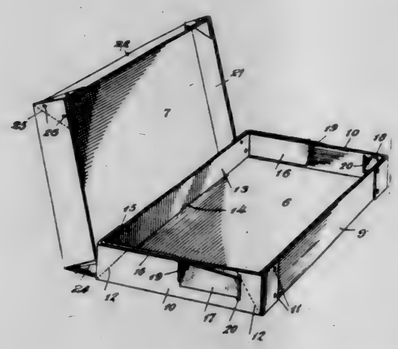
1,559,238. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Oct. 23, 1924. Serial No. 745,273. 1 Claim. (Cl. 229—41.)

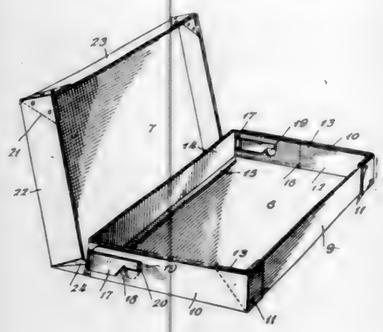


In a collapsible box, a bottom section including side walls, and a lining for said section also including side walls each having a portion engageable with one side of an adjacent side wall of said section, and another portion formed into a locking tongue, the major portion of which is engageable with the opposite side of said side wall and the free extremity of said tongue being engageable with the first named side of the latter wall, each of the side walls of the section having a slit and a slot, said slit receiving the portion of the adjacent side wall of the lining contiguous to the inner end of said locking tongue, and the slot receiving the free extremity of said tongue.

---

1,559,239. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Nov. 1, 1924. Serial No. 747,147. 3 Claims. (Cl. 229—41.)

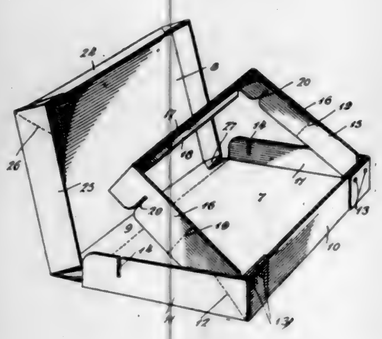
1. In a collapsible box, a section including side walls, an inner lining for said section also including side walls and a locking tongue for each of the latter side walls joined to its wall adjacent one end thereof, and capable of being extended around an end of an adjacent side wall



of said section to engage said end between said tongue and adjacent portion of the lining to retain the latter in operative position.

---

1,559,240. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Nov. 1, 1924. Serial No. 747,148. 5 Claims. (Cl. 229—41.)



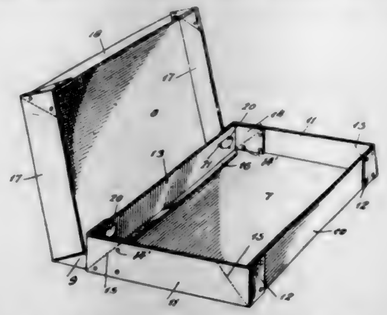
1. In a collapsible box, a bottom section including a bottom, side walls and a front wall, and a reinforcing lining for said section pivotally connected to said front wall for movement toward and away from said bottom and having side walls, portions of which extend interiorly of the side walls of said section and other portions exteriorly of the latter walls.

---

1,559,241. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Jan. 9, 1925. Serial No. 1,436. 2 Claims. (Cl. 229—41.)

1. In a collapsible box, a bottom section including side walls and a rear wall having its ends overlapping said side walls, each of said side walls and the adjacent overlapping end having folding lines to permit of collapsing said rear wall, fasteners extending through said overlapping ends and side walls only beneath said folding lines to permit of the portion of each side wall above its folding line having an outward movement relative

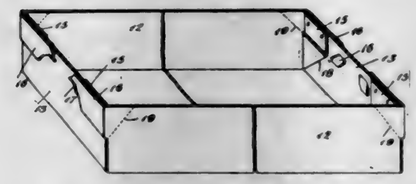
to the adjacent overlapping end of said rear wall, a top section, an intermediate section connecting said top and bottom sections, and locking elements formed from the



material of said intermediate section and connected to said upper portions of the side walls above said folding lines and capable of being interlocked with said rear wall.

---

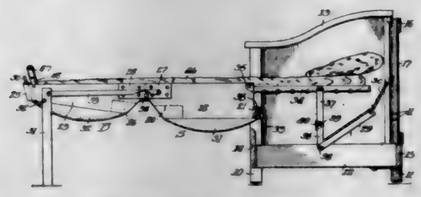
1,559,242. COLLAPSIBLE BOX. CHARLES A. FOX, New York, N. Y. Filed Mar. 5, 1925. Serial No. 13,051. 4 Claims. (Cl. 229—31.)



1. In a collapsible box, a section including a side wall and an end wall, one of which is formed with a slot, a corner portion at one end of the other wall formed to provide a securing portion and a locking tongue, said securing portion being fastened to the first named wall and said locking tongue being capable of extension along said first named wall and engaged in said slot, and a folding line formed in said other wall adjacent said locking tongue and providing a hinge for said tongue to permit of free upward and downward movements thereof relative to the side and end walls in a plane substantially parallel to said first named wall when the tongue is being inserted into said slot.

---

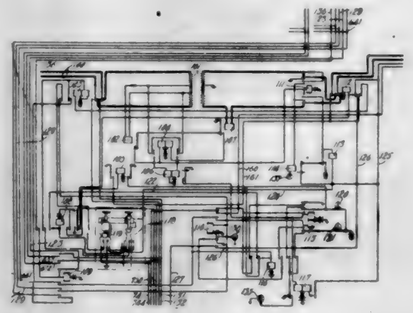
1,559,243. CONVERTIBLE SEAT STRUCTURE. ABE J. FREEMAN, Chicago, Ill., assignor to The Seng Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1920. Serial No. 373,170. 4 Claims. (Cl. 5—46.)



1. The combination with a seat frame, of a seat invertibly pivoted at the front thereof, an extension frame pivoted at its front corners to the inside of the outer lower corners of said seat and being narrower than the seat, a bar pivoted at each side of the seat frame in the path of the seat but not in the path of the extension frame, and a spring tending to hold the free end of each bar upwardly at the rear of the seat frame but below the back so that the seat will engage the bars and be cushioned by the springs upon its folding movement.

---

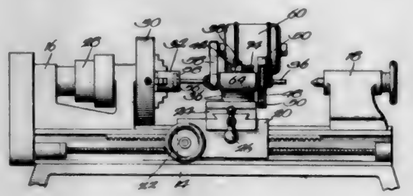
1,559,244. TELEPHONE-EXCHANGE SYSTEM. EARL S. GIBSON, Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1923. Serial No. 656,742. 8 Claims. (Cl. 179—27.)



1. In a telephone system, a group of equivalent lines arranged to be marked and selected, means for identifying the lines when busy, automatic switches for extending connections over the lines of said group in accordance with their marked condition, and means for governing the operation of said switches to extend a connection over one of said lines regardless of its busy condition.

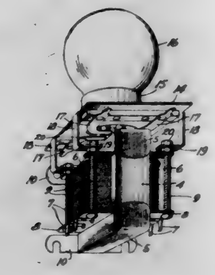
---

1,559,245. GRINDING MACHINE. JAMES E. GILBERT, Milwaukee, Wis. Filed May 16, 1924. Serial No. 713,652. 4 Claims. (Cl. 51—261.)



1. In mechanism of the class described, a support, a hollow tool carrying shaft rotatably journaled in said support, a second tool carrying shaft within and longitudinally movable with respect to said hollow shaft to adjust the position of the tool carried thereby with respect to said support and with respect to the tool carried by said hollow shaft, means carried by and movable with respect to said hollow shaft for securing the two shafts together whereby they may be rotated in unison, and means to lock said hollow shaft against movement to facilitate manipulation of the means for securing the shaft together.

**1,559,246. SIGNALING APPARATUS.** ALBERT F. F. GILSON, Oradel, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,914. 2 Claims. (Cl. 175—356.)



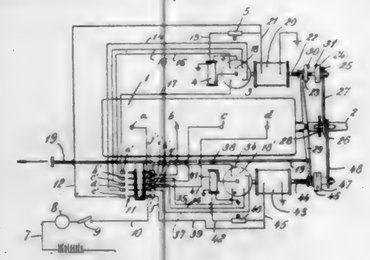
1. In combination, a transformer, a pair of plates, means for clamping said transformer between said plates, a vacuum tube socket, means integral with said vacuum tube socket and secured to the clamping means of said transformer, and a common means for mounting said transformer and vacuum tube socket.

---

**1,559,247. CALENDAR.** CLAUDE D. GRATON, Newark, N. J. Filed Feb. 28, 1923. Serial No. 621,712. 1 Claim. (Cl. 283—2.)

A depositor's reminder and deposit slip construction comprising a holder including calendar sheets and having an appropriately designated space thereon for the entrance of characters identifying the depositor with his deposits, a group of deposit slips mounted upon each calendar sheet, each of said slips representing a fractional part of the period of time within which the deposits are to be made at intervals in relation to the period of time represented by the respective calendar sheets, each slip being provided with a detachable section, upon which the amount of the deposit may be indicated, and also having an appropriately designated space for the entrance of identification characters corresponding to each other, and the one on the holder.

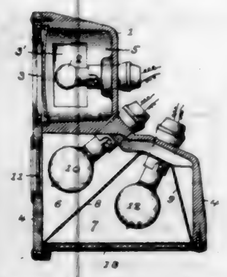
**1,559,248. IGNITION SYSTEM.** FRANK GUELCHER, Brooklyn, N. Y. Filed Mar. 14, 1925. Serial No. 15,614. 7 Claims. (Cl. 123—148.)



1. An ignition system comprising the combination with a set of spark plugs, of two distributors, means for separately connecting each distributor to the set of spark plugs, at least one source of electrical energy, and manually operable means for selectively connecting the distributors so as to receive electrical energy.

---

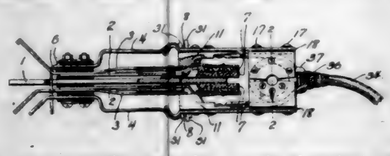
**1,559,249. REAR SIGNAL LIGHT FOR MOTOR VEHICLES.** WENDELL WOODS HALL, Chicago, Ill. Filed July 2, 1925. Serial No. 40,990. 4 Claims. (Cl. 40—132.)



1. In a rear signal device for motor vehicles, an enclosing shell the lower portion of which is divided into an upper and a lower sub-chamber by an inclined partition extending the transverse width of said shell portion, the upper sub-chamber having an opening in its rear wall and a signal lamp in its interior, the lower sub-chamber having an opening in its bottom wall coextensive with the area of said sub-chamber and a signal lamp in its interior.

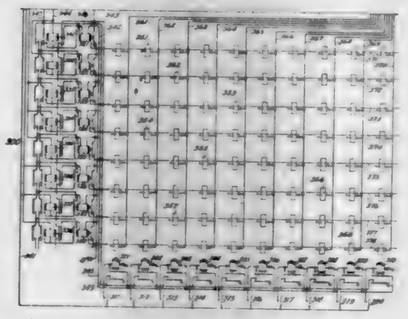
---

**1,559,250. ELECTRICAL PLUG SWITCH.** LEON N. HAMPTON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1920. Serial No. 432,252. 5 Claims. (Cl. 173—324.)



1. In an electrical test plug, a pair of contact arms, each having a flat length and bent at one end to conform to the configuration of a distributing frame spring; and a contact member insulatingly supported on the inner side of a portion of the flat length of each said arm, and provided with a stepped contacting surface.

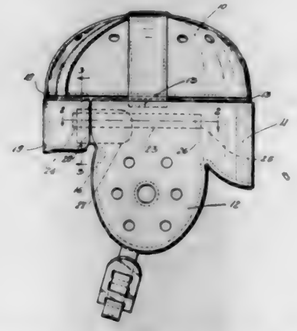
**1,559,251. PRIVATE-BRANCH EXCHANGE SENDER CIRCUIT.** ROBERT W. HARPER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1924. Serial No. 719,711. 20 Claims. (Cl. 179—27.)



7. In a telephone system, an impulse transmitter including a key adapted for successive actuation to set up the same digit a plurality of times and a registering mechanism of the cross-bar switch type for registering the digits set up.

---

**1,559,252. FOOTBALL HELMET.** THOMAS J. HARTMAN, Chicago, Ill. Filed June 1, 1922. Serial No. 565,024. 2 Claims. (Cl. 2—3.)



1. A football helmet comprising armored sections adjustably connected together, each of which consists of an inner layer of padding and an outer layer of armor; and a tongue of armor material secured between the layers of one of said sections, said tongue slidably projecting between the layers of the other of said sections and effectively covering the interstices between said sections, the stitching for holding said layers together being interrupted to form a passageway for said tongue.

---

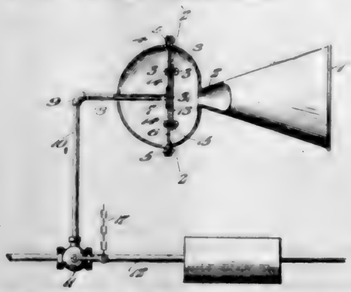
**1,559,253. TROUSERS.** NATHAN HENRY, Chicago, Ill. Filed Aug. 23, 1924. Serial No. 733,756. 2 Claims. (Cl. 2—237.)

1. A trousers having a waist-band with seams at the rear quarter points and a lining across the inside of said seams, a pair of belt members of flexible fabric similar to the material of the trousers, each member having one end stitched into one of said seams at the quarter point rearward of the hip and extending forward therefrom, a pair of loop members at the front of the trousers through which said belt members pass, and

means for holding the free ends of said belt members adjustably in position.

---

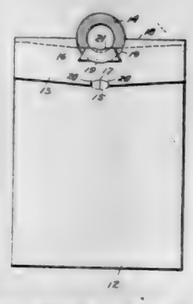
**1,559,254. AUTOMOBILE HORN.** ALVIN EVANS KEPHART, Ebensburg, Pa. Filed Mar. 27, 1925. Serial No. 18,660. 4 Claims. (Cl. 116—142.)



2. In a device of the character stated the combination of a horn, a closed compartment in communication with said horn, a fixed plate arranged within said compartment, an oscillatory disc arranged for movement toward and away from said fixed plate and normally displaceable under the influence of atmospheric pressure, bolts provided with sleeves carried by the fixed plate and upon which sleeves said oscillatory plate is movable, and a pipe extending into the said compartment and connected with the fixed plate for conveying a medium under pressure for displacing said oscillatory disc.

---

**1,559,255. CARRY BAG.** CHARLES P. KLEEBAUER, Cohoes, and ROBERT M. LACKEY, Waterford, N. Y. Filed June 23, 1921. Serial No. 479,768. 4 Claims. (Cl. 229—68.)

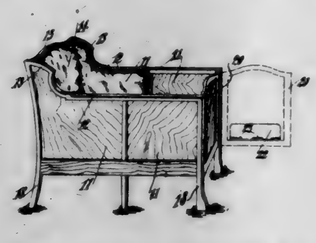


1. A carry bag having a back and front united to form an end opening receptacle, said front having an extended flap for closing the end of said receptacle; a

reinforcing strip permanently attached to said flap to form a stiffened area therein; a handle portion partially severed from said flap and reinforcing strip, to extend from the end edge of said front when said flap is folded in service relation; means for holding said flap in service relation, said means embodying the body of the flap surrounding the opening formed by severing said handle portion, a portion of said back having lateral extensions for engaging the material surrounding said opening, and a detent on said back engaging said flap in service relation to prevent the separation thereof from contact with said back.

---

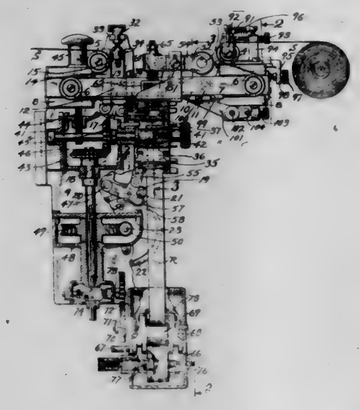
1,559,256. WAITING BOOTH FOR STORES. BENJAMIN W. KLEIN, Mount Vernon, N. Y. Filed Feb. 27, 1923. Serial No. 621,568. 2 Claims. (Cl. 155—1.)



1. A waiting booth for stores consisting of an enclosure providing a seat, a back for said seat, sidewalls extending upwardly from and forwardly of, said seat, a movable closure for the forward end of said booth, a foot rest mounted upon said closure and a foldable screen mounted upon said sidewalls at the rear end thereof, the rear ends of said sidewalls, and back of said seat, being extended above the height of the main portion of said sidewalls.

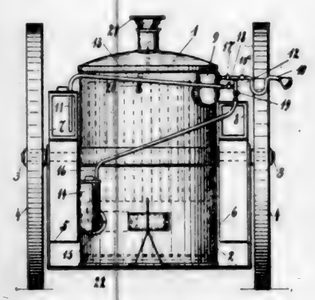
---

1,559,257. TIP-APPLYING MACHINE. MAXIMILIAN KLEIN, North Plainfield, N. J., and JOHN A. STEIN, New York, N. Y., assignors to American Machine and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 6, 1924. Serial No. 736,247. 27 Claims. (Cl. 131—39.)



1. A machine for applying tips to a constantly traveling strip, comprising mechanism for intermittently arresting minor parts of said strip, and mechanism for applying tips to the arrested parts.

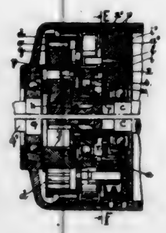
1,559,258. PORTABLE SPRAYER FOR DESTROYING VERMIN ON PLANTS. FRIEDRICH KLUSMEYER, Aplerbeck, Germany. Filed Apr. 29, 1924. Serial No. 709,938. 1 Claim. (Cl. 299—84.)



In a portable sprayer for destroying vermin on plants; the combination with a steam boiler having a furnace, a rose pipe issuing from the top of said steam boiler, and a poison container in communication with said rose pipe; of a separate detachable knee-shaped sulphur receiver inserted with its lower part in the furnace of said boiler and at its upper part in communication with said rose pipe, and shut-off cocks to connect either the poison container or the sulphur receiver with said rose pipe substantially as set forth.

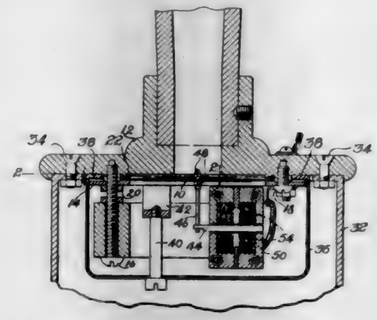
---

1,559,259. CENTRIFUGAL FRICTION COUPLING FOR STARTERS FOR INTERNAL-COMBUSTION ENGINES. KARL KNAPP, Halle-on-the-Saale, Germany. Filed Jan. 27, 1923. Serial No. 615,393. 3 Claims. (Cl. 74—34.)



1. A centrifugal friction coupling for the starters for internal combustion engines comprising in combination with the shaft of the internal combustion engine and with an epicyclic gear comprising an inner hollow wheel, a pinion on said shaft of the dynamo, a friction crown having wedge shaped grooves and meshing with said pinion, hinge bolts fixed in the inner hollow wheel of said epicyclic gear, centrifugal masses pivoted on said hinge bolts so that they extend forward the same in the direction of rotation, and wedge-shaped friction ribs on the circumference of said centrifugal masses designed to engage at low number of revolutions with said wedge shaped grooves of the friction crown and drive the same by pushing.

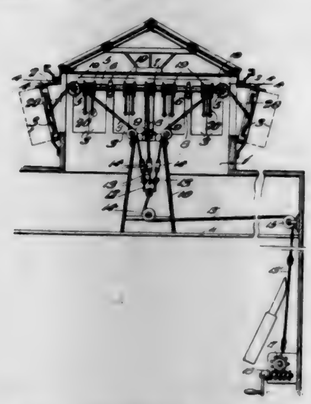
1,559,260. MOUNTING FOR SHEETLIKE ARTICLES. FREDERIC S. KOCHENDORFER, River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 19, 1923. Serial No. 646,447. 11 Claims. (Cl. 181—31.)



1. A mounting for a sheet-like article comprising a resilient member, a mounting member having a pocket to allow therein displacement of the resilient member, and means for causing a relative movement of the mounting member and the article to displace the resilient member and tauten the article.

---

1,559,261. SKYLIGHT. ARTHUR R. KONSALIK, Philadelphia, Pa. Filed Aug. 7, 1925. Serial No. 48,705. 4 Claims. (Cl. 108—16.)

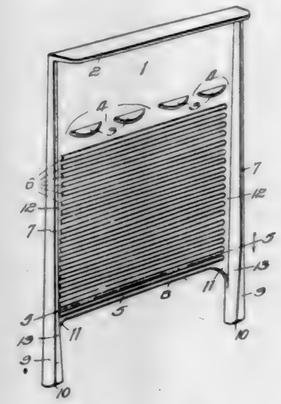


1. A skylight construction of the character stated, comprising a supporting structure outwardly opening, laterally movable cover sections for said structure, a freely rotatable shaft paralleling said structure, a drum fixed to said shaft, a cable connecting said drum and cover sections, and means operatively connected with said shaft for the release thereof to permit automatic opening of said cover sections.

---

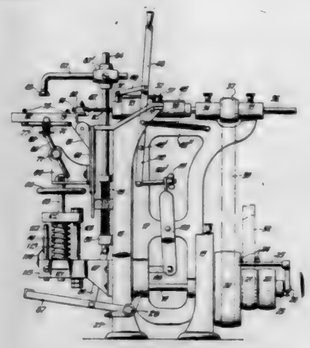
1,559,262. WASHBOARD. CARL A. KUMMERMEHR and JACOB SCHILLING, Belleville, Ill. Filed Apr. 17, 1922. Serial No. 553,588. 1 Claim. (Cl. 68—29.)

In a wash-board structure, a top section, a plurality of spaced flat semi-circular soap rests for said section, a rubbing section, drain sections to the sides of the rubbing section, said drain sections having their walls each provided with an inclined upper face for gradually deepening the drain sections from their upper ends toward their discharge ends, said walls terminating in supporting legs having their upper faces in a plane with the upper faces of said walls, said legs having their inner faces inclined for gradually widening the lower ends thereof and reinforcing sections uniting the lower corners of the rubbing section with the inclined inner faces of the supporting legs.



---

1,559,263. BORING MACHINE. ERNEST GEORGE LACEY, Richmond, Victoria, Australia. Filed Sept. 3, 1924. Serial No. 735,576. 17 Claims. (Cl. 144—103.)

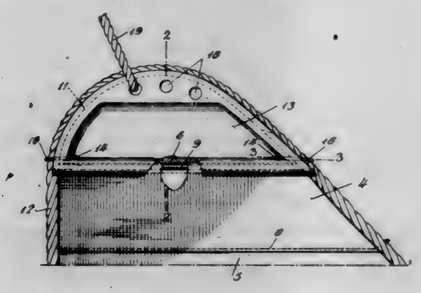


8. In a boring machine the combination of, a main frame, a transversely movable member on the main frame, a bit carrying spindle rotatively and reciprocatingly mounted on the transversely movable member, a bracket adapted to slide vertically in guides on the front of the main frame, a work table supported on the upper part of the bracket, a screwed rod having its upper end revolubly secured to the reciprocable bracket on the front of the main frame, a sleeve having a screw engagement with the said rod and having its lower end adapted to reciprocate in a hole formed in a bracket fitted to the front of the main frame, a compression spring surrounding the sleeve and adapted to exert an upward pressure thereon, a flange on the upper end of the said sleeve, a rod having its upper end fitted to the rear part of the flange and its lower end adapted to

reciprocate in a hole in the said bracket, an adjustable stop pin mounted on the opposite side of the said screwed rod and adapted to limit the downward movement of the same, a reduced lower end or shoulder on the rod fitted to the flange on the rear of the sleeve, adjustment nuts on the lower end of the reduced portion of the rod adapted to limit the upward movement of the said sleeve, a bolt adapted to engage a shoulder on the rod and to prevent any downward movement of the sleeve and table, a spring acting on the bolt to maintain it in its locked position, and adjustable connections between the said bolt and a lever for operating the drill carrying spindle or sleeve surrounding the front end of the same whereby after a hole has been bored and the said spindle is moved in a rearward direction the bolt will be released and the sleeve together with the brackets and table will be allowed to move downwardly to place the work in position for boring a hole at a higher elevation.

---

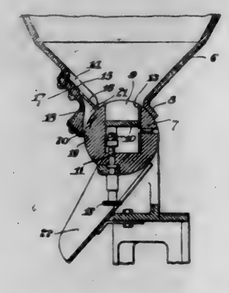
1,559,264. HEADPIECE FOR SAILS. LOUIS J. LARSEN, Long Island City, N. Y. Filed Feb. 4, 1925. Serial No. 6,677. 13 Claims. (Cl. 114—115.)



2. A head piece for sails formed from a single piece of material and including a body having a channel formed along one edge thereof and capable of receiving a portion of a sail, and a rod insertable into said channel and engageable with said portion for preventing detachment of said sail from said body.

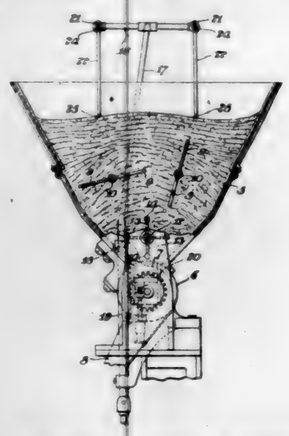
---

1,559,265. CIGAR BUNCHING. BERNARD LIBERMAN, Philadelphia, Pa. Filed Nov. 16, 1921. Serial No. 515,446. 9 Claims. (Cl. 131—39.)



1. In the art of bunching, the method of separating measured charges of scrap tobacco from a supply, which consists in pressing evenly into a normal plane, the exposed surface of the measured charge which projects above said normal plane, and then severing the body of the charge from the supply.

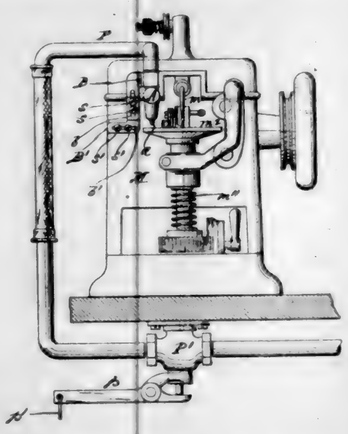
1,559,266. CIGAR BUNCHING. BERNARD LIBERMAN, Philadelphia, Pa. Filed Apr. 8, 1922. Serial No. 550,666. 5 Claims. (Cl. 131—39.)



3. In a scrap bunching machine, the combination of a measuring element, a supply hopper for delivering scrap thereto, rotating agitators positioned near the middle part of the hopper, and a rotating agitator near the discharge of the hopper having horizontal rods, operating to press the charge into the measuring element.

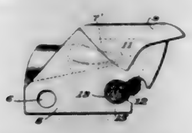
---

1,559,267. FUR-SEAMING MACHINE. ISIDORE LIPSCHITZ, Brooklyn, N. Y. Filed June 6, 1925. Serial No. 35,359. 2 Claims. (Cl. 112—149.)



1. In a fur sewing machine of the character designated, the combination with the feed discs and sewing mechanism, of an air jet nozzle positioned in the line of feed in advance of the stitching point to direct a jet of air between the layers of the fur passing between the feed discs to inturn the hairs on the opposed edges of the fur preceding their subjection to the stitching operation, and means for effecting the adjustment of said air jet both horizontally and vertically as related to the feed discs and seam, substantially in the manner and for the purpose set forth.

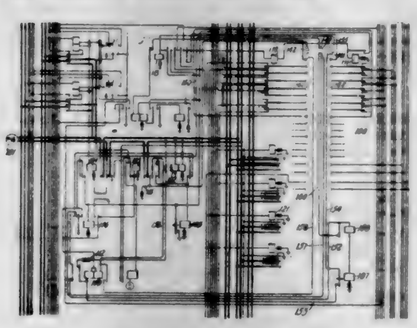
1,559,268. AUTOMATICALLY-THREADING SHUTTLE. HENRY D. MARTIN, Griffin, Ga., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 8, 1925. Serial No. 42,122. 6 Claims. (Cl. 139—220.)



1. In an automatically threading loom shuttle, the combination of a threading block having a longitudinally extending thread passage, a bridge over which the thread passes to the side delivery eye, and a thread tension pad extending transversely of a thread passage frontward of and a substantial distance below the bridge to engage and tension the thread as it is deflected downwardly from the bridge towards the side delivery eye.

---

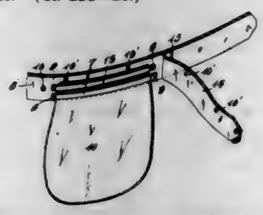
1,559,269. TELEPHONE-EXCHANGE SYSTEM. WILLIAM H. MATTHIAS, Hackensack, and WALTER P. ALBERT, East Orange, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1923. Serial No. 677,834. 8 Claims. (Cl. 179—27.)



1. In a telephone system, telephone lines, a plurality of connecting means each individual to a different pair of said lines, registering mechanism comprising switch and relay recording devices, and means responsive to the joint setting of said switch and relay recording devices for operating one of said connecting means to interconnect the corresponding telephone lines.

---

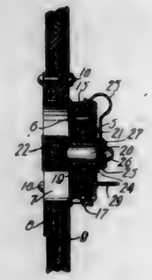
1,559,270. BATHER'S PURSE. HARRY MILLER, Cleveland, Ohio. Filed Feb. 27, 1925. Serial No. 12,013. 2 Claims. (Cl. 224—26.)



1. An article of the character described comprising, a belt, a relatively narrow elastic flap secured at opposite ends to the belt and extending longitudinally thereof, a pocket of water proof material having an open upper end, said pocket being secured to the belt adjacent the upper open end, the portion between the point of attachment to the belt and the open end being foldable beneath the elastic flap, and a relatively large elastic cover flap arrangeable over the narrow flap and upper portion of said pocket.

---

1,559,271. RHEOSTAT. PERCY E. MILLS, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1922. Serial No. 603,937. 5 Claims. (Cl. 201—55.)



1. A rheostat comprising a block having a notch therein, a resistance coil on said block, and means acting in said notch to draw the ends of said coil together.

---

1,559,272. TOOL OR APPARATUS FOR BENDING METAL FABRIC. EDWARD MARTIN MONAGHAN and RICHARD RIGBY, Liverpool, England, assignors to The British Reinforced Concrete Engineering Company Limited, Manchester, England. Filed June 6, 1922. Serial No. 566,259. 5 Claims. (Cl. 81—15.)

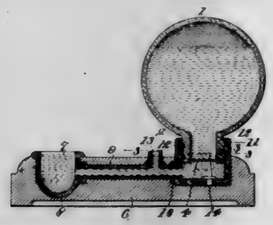
1. Apparatus for bending metal fabric comprising a handle an adjustable plate on said handle, the rear edge of which is adapted to engage and bend a plurality of strands of the fabric and means on said handle forward of the said adjustable plate, to engage the opposite side of the fabric, as set forth.

---

1,559,273. OUTLET-BOX STRUCTURE. JOSEPH MORGENSTERN and JOSEPH G. RAQUETTE, Cleveland, Ohio; said Morgenstern assignor to The Silver and Morgenstern Electric Company, Cleveland, Ohio. Filed Sept. 11, 1922. Serial No. 587,538. 5 Claims. (Cl. 247—22.)

1. In combination, a chambered outlet box provided with a stud portion within the chamber thereof and having an opening, said outlet box being also provided with a wall portion having opposed openings in alignment with the opening in said stud portion and a supporting bar extending through all of said openings.

1,559,274. RESERVOIR INKWELL. BERT M. MORRIS, San Francisco, Calif. Filed Mar. 16, 1925. Serial No. 15,739. 1 Claim. (Cl. 120—59.)

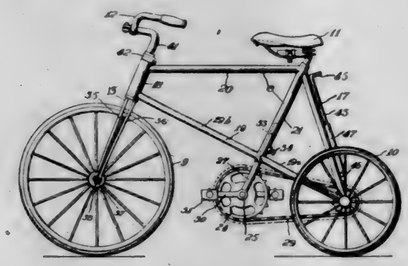


A reservoir ink well including a base having a coupling member, a well spaced from the coupling member and a passage affording communication between the coupling member and well, a puncturing member positioned in the coupling member and extending vertically thereof, and a container having a penetrable sealing member, the puncturing member in the coupling being off center of the sealing member whereby upon rotation of the container in the act of connecting the same to the coupling member an arcuate cut will be made in the sealing member.

1,559,275. MANUFACTURE OF ARTICLES FROM HIGHLY REFRACTORY MATERIALS AND ARTICLES FORMED. STEPHEN A. MYLER, deceased, late of Millbrook, N. Y., by Catherine Myler, Glen Cove, N. Y., administratrix, assignor to Stephen Wisey, Glen Cove, N. Y. Filed Oct. 7, 1924. Serial No. 742,265. 3 Claims. (Cl. 25—156.)

3. The method of manufacturing a refractory article, comprising mixing graphite and pulverized soft coal together with petroleum oil until it becomes putty-like, shaping the mixture in a mould and subjecting it to heat until the oil is dried therefrom, dipping the shaped article in tar, and then completely carbonizing the article.

1,559,276. VELOCIPEDE. JOHN H. NELSON, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,540. 10 Claims. (Cl. 208—113.)

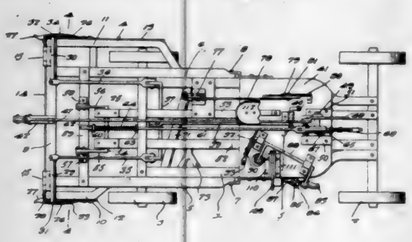


1. A tricycle having, in combination, a frame having front and rear supporting wheels, and propelling means independent of the front wheel and operatively connected with one of the rear supporting wheels, said propelling means including a crank shaft, and said frame including a tubular upwardly and rearwardly extending member open at its lower end, a fork having a shank secured in the lower end of said frame member and having journal bearings in its lower free ends in which said shaft is mounted, and pedal-carrying crank arms fast upon said shaft.

1,559,277. WHEEL-SUPPORTING FORK FOR BICYCLES AND THE LIKE. JOHN H. NELSON, Chicago, Ill. Filed Apr. 20, 1923. Serial No. 633,417. 8 Claims. (Cl. 208—96.)

1. A wheel carrying fork comprising a shank, and a bifurcated lower portion having U-shaped members disposed one in front of the other with their corresponding lower ends integral and their upper ends bowed and rigidly secured upon opposite sides of said shank.

1,559,278. STREET-SWEEPING MACHINE. JOHN M. NEUERT, Indianapolis, Ind. Filed Oct. 20, 1924. Serial No. 744,707. 3 Claims. (Cl. 15—78.)



1. A street sweeping machine comprising a wheeled main frame, an auxiliary frame hingedly supported on the rear of the main frame, means carried by the auxiliary frame for gathering refuse, said means including side brushes and a rear brush hingedly supported at its upper edge to the rear end of the auxiliary frame, means for raising the rear brush into an inoperative position whereby the refuse collected by the brushes its left in a pile, and means for normally locking the rear brush into cooperative relation with the side brushes.

1,559,279. SEPARABLE FASTENER. WALTER H. PIERCE, Watertown, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Nov. 18, 1922. Serial No. 601,816. 1 Claim. (Cl. 24—208.)

A fastener comprising, in combination, a fastener part having a closed end tubular rivet projecting from one side thereof and a securing part presenting a cap or anvil portion and a cutting and clenching portion, said fastener part presenting adjacent the fabric a surface approximating in overall dimensions the over-all dimensions

of said cap, said cap flanged beneath said cutting and clenching portion and presenting fabric-receiving spaces above and below the latter, said parts organized and operating when pressed together during assembly to fill the fabric-receiving spaces above said cutting and clenching part solid full of detached fabric deformed under great

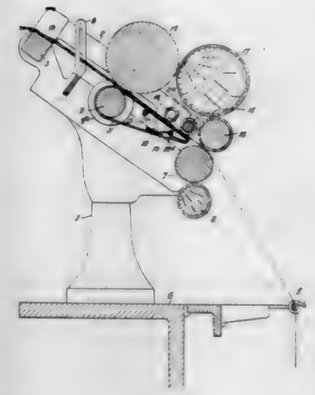
pressure and to grip the main portion of the carrying fabric under great pressure between said flange and the adjacent surface of said fastener part while providing in the space below said cutting and clenching part for the reception of a substantial area of the carrying fabric under substantially less pressure.

1,559,280. ELECTRON-DISCHARGE DEVICE. VICTOR L. RONCI, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 23, 1923. Serial No. 627,106. 2 Claims. (Cl. 250—27.)

1. In an electron discharge device, an evacuated vessel, an insulating member having an aperture, a threaded metallic member extending through said aperture, and a helix of highly refractory metal having its turns engaging the threads on said metallic member, said helix having one end abutting said insulating member.

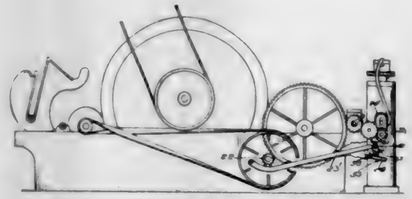
1,559,281. DRAWING MECHANISM FOR RING-SPINNING FRAMES AND THE LIKE. JAMES LEVER RUSHTON, Bolton, England. Filed May 10, 1924. Serial No. 712,205. 4 Claims. (Cl. 19—131.)

1. The process for obtaining a high draft of the yarn in ring spinning frames, draw frames and the like, which consists in passing the roving between a tightly-stretched endless belt and a weighted roller, then between a hollow roller and said endless belt then between a covered roller and said belt and finally between a fluted roller and a second covered roller, the arrangement being such that the hollow middle roller and the first



covered roller each control fibres of different lengths, the final draft being effected by the fluted roller and the second covered roller substantially as herein set forth.

1,559,282. STOP MOTION FOR CARDING MACHINES. JOHN B. SANTOS, New Bedford, Mass., assignor of one-half to William Martin, New Bedford, Mass. Filed Jan. 6, 1923. Serial No. 611,098. 10 Claims. (Cl. 19—167.)

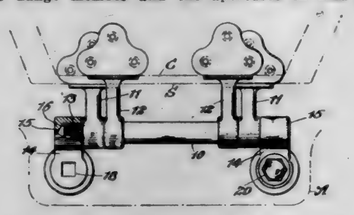


8. In combination with a carding machine provided with a lever that is associated with a gear that constitutes an element of the drive for the doffer roll and a hand lever that engages with the first mentioned lever of a spring actuated slidable bar provided with a lateral projecting portion for contact with the hand lever, a support for the slidable bar, a catch, a link and a lever carried by the support, a projection connected to the slidable bar for engagement with the catch to hold the slidable bar against upward movement, a rod connected to the link and to a lever, and means for actuating the lever controlled by downward movement of the top calendar roll beyond its normal operative position.

1,559,283. COVER-ATTACHING MEANS. CHRISTIAN C. SCHLEGEL, Long Island City, N. Y. Filed Apr. 21, 1925. Serial No. 24,715. 6 Claims. (Cl. 4—236.)

1. In combination with a closet hopper seat hinge construction comprising a pintle member carrying pivotally mounted hinge members and having vertically

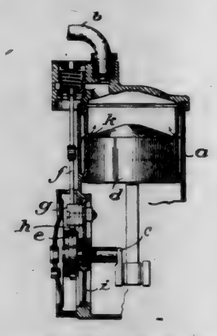
apertured lug members on the ends thereof, bolt members adapted to be inserted upwardly through the closet hopper flange member and the apertures in said lugs,



and nuts on the upper ends of said bolt members above said lugs for securing the hinge members in position on the closet hopper.

---

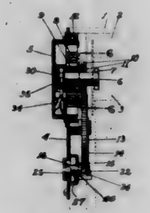
1,559,284. APPARATUS FOR PRODUCING PULSATING AIR PRESSURE. RICHARD KARL SCHMID and WALTER PAUL WEZEL, Stuttgart, Germany. Filed June 25, 1924. Serial No. 722,404. 2 Claims. (Cl. 230—32.)



1. In an apparatus for producing pulsating air pressure, in combination, a cylinder, a valve, a piston moving in the said cylinder, means for driving the said piston and the valve, the cylinder being provided with slots for admitting air to the cylinder by suction, the compressed air leaving the cylinder through the said valve.

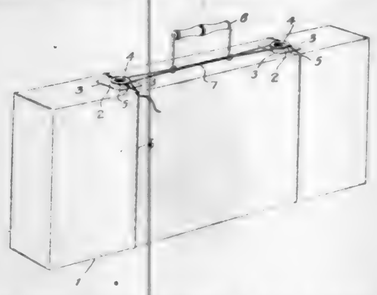
---

1,559,285. CAMERA. BENJAMIN F. SCHMIDT, Los Angeles, Calif. Filed Sept. 26, 1921. Serial No. 503,178. 18 Claims. (Cl. 95—31.)



1. In a film-roll camera having a shutter actuating means, a member movable with said means, locking means for holding said member from return movement when the shutter actuating means is operated, automatic means for rotating the film spool, hand means for controlling the operation of the automatic means, and means whereby only after the rotation of the spool a sufficient number of revolutions to completely wind the exposed film thereon will the member be released.

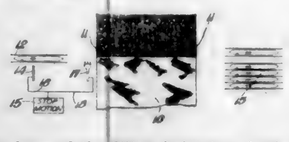
1,559,286. MEANS FOR CARRYING CARDBOARD BOXES. DAVID J. SEAMAN and CHARLES F. SOMMERS, Saginaw, Mich. Filed June 14, 1924. Serial No. 719,976. 1 Claim. (Cl. 224—56.)



Box-carrying means comprising a pair of plates designed to be applied in spaced relation to the outside of a box, each plate having tangs adapted to be bent over in the box wall and being further formed with an outturned flange raised above its upper surface from material removed from a central opening, the two plates on a box adapted to cooperate with a cord substantially as set forth.

---

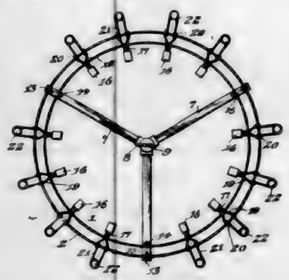
1,559,287. DROP-BOX LOOM. JOHN C. SHAMBOW, Woonsocket, R. I., assignor to Shambow Shuttle Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Oct. 7, 1924. Serial No. 742,172. 6 Claims. (Cl. 139—371.)



1. A box loom of the filling feeler type having, in combination, a lay having a single box on one end and a drop box on the other end, a feeler on the single box side of the loom, a stop motion, connections between the stop motion and the feeler, shuttles for the boxes, each provided with a feeler hole and a yarn delivery eye located in the end of the shuttle nearer to the selvage when boxed on the drop box side of the loom.

---

1,559,288. HOLDER. GEORGE R. SHEALY and JOHN K. DERRICK, Little Mountain, S. C. Filed Apr. 9, 1925. Serial No. 21,913. 2 Claims. (Cl. 211—14.)



1. A holder comprising a body portion formed of an inner and an outer section, spacing blocks arranged between said sections, hangers having their lower ends arranged between said outer section and said spacing

blocks, means for securing the lower ends of said hangers, said blocks and said sections together, and a series of radially disposed counter-balanced supports hinged to said outer section, each of said supports seating on and projecting inwardly from said inner section and having its outer end provided with a clamp for detachably connecting the article thereto.

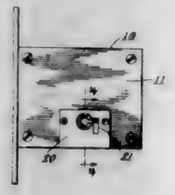
---

1,559,289. COATING COMPOUND, MOLD, AND METHOD OF PREPARING MOLDS AND SURFACES INVOLVED IN MOLDING OPERATIONS. ROBERT L. SIBLEY, Roselle Park, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed Oct. 10, 1923. Serial No. 667,693. 10 Claims. (Cl. 18—53.)

1. The method of preparing vulcanizing molds, which comprises spraying the molding surfaces with a dilute aqueous solution of sodium sulfonate.

---

1,559,290. LOCK. BENJAMIN SIMONOVITS and JACOB FISCHER, New York, N. Y. Filed Jan. 17, 1924. Serial No. 686,727. 3 Claims. (Cl. 70—14.)



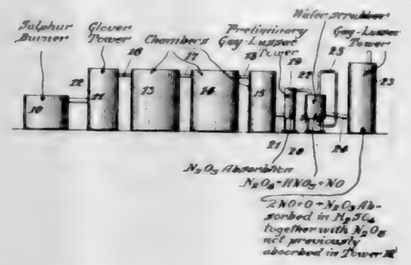
3. A lock provided with a plurality of key holes each of different contour and each capable of successively receiving an articulated key bit, means in one key hole to properly shape the key as the same is rotated therein, and means in the other key hole to rigidly maintain said key in such shape as it is turned to operate the lock.

---

1,559,291. BELT. FREDERICK C. SIMMONS, Highland Park, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed June 17, 1924. Serial No. 720,532. 2 Claims. (Cl. 241—8.)

1. The combination of a belt having a bent over end to form the buckle engaging loop, fastening devices for securing said bent over end to the main body of the belt, retaining loops for the other end of the belt which projects through the buckle, means for securing said retaining loops loosely to the main body of the belt, comprising a flexible strip secured to the belt by elements of said fastening devices, one retaining loop secured between said strip and belt and between said fastening elements, said flexible strip having a substantial extension beyond a fastening element and having a folded over part, the layers of which are secured together at a distance from the bend corresponding approximately with the width of the retaining loop to form a pocket for securing and maintaining the other retaining loop at the extreme end of the said folded portion.

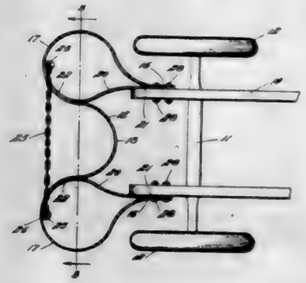
1,559,292. METHOD OF MANUFACTURING SULPHURIC ACID. JEAN V. SKOGLUND, New York, N. Y. Filed Mar. 25, 1924. Serial No. 701,839. 11 Claims. (Cl. 23—161.)



1. In the manufacture of sulphuric acid using nitrous gases, the method of recovering nitrous gases consisting in treating the gases with water and then absorbing the residual gases with sulphuric acid.

---

1,559,293. AUTOMOBILE BUMPER. SHEFFIELD SMITH, North Providence, R. I. Filed Apr. 9, 1925. Serial No. 21,758. 6 Claims. (Cl. 293—55.)



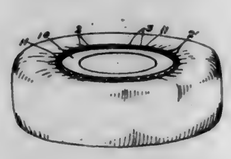
1. In a bumper for automobiles, an impact member comprising forwardly directed loops, and curved resilient arms rigid with the rear ends of the loops engaging forward portions of the loops, the lateral convexity of the loops being in a direction opposite to the direction of the lateral convexity of the arms.

---

1,559,294. INK PAD. PHILMORE F. SPERY, Chicago, Ill., assignor to Sengbusch Self-Closing Inkstand Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1920. Serial No. 414,045. 6 Claims. (Cl. 91—54.5.)

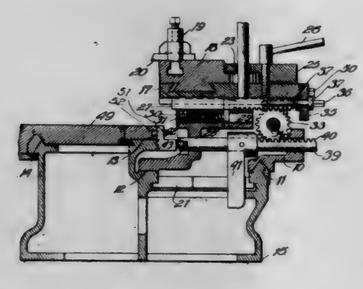
1. An inking pad comprising a plurality of sections connected together along their edges to fold together in optional superposed relations for selectively exposing the opposite faces of the various sections.

1,559,295. FREQUENCY CONVERTER. HUGH M. STOLLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1916. Serial No. 121,171. 9 Claims. (Cl. 172—281.)



5. A static frequency converter comprising a primary winding excited by current of a given frequency for producing a rotating non-uniform magnetic field, and a secondary winding associated with said primary winding wound in sucessively opposed portions whereby an electromotive force of a frequency other than that used in exciting the primary is induced therein by said rotating field.

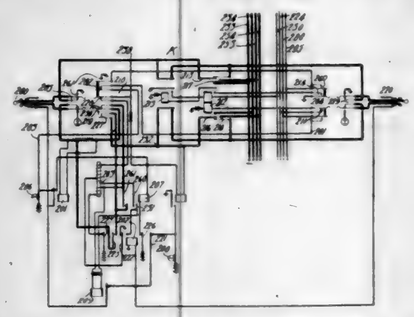
1,559,296. REAR TOOL. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Rockford Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 30, 1919. Serial No. 293,868. 8 Claims. (Cl. 82—25.)



1. In a lathe, in combination, a rear tool carriage, a rear tool on said carriage, a front tool carriage movable past said rear tool carriage, a member movably mounted in said rear tool carriage, a member on said front tool carriage engaging said movably mounted member, an operative connection between said rear tool and said movably mounted member, whereby motion of said front cariage past said rear carriage will automatically actuate said rear tool, and additional independent means for adjusting the position of said rear tool both longitudinally and transversely with respect to its carriage.

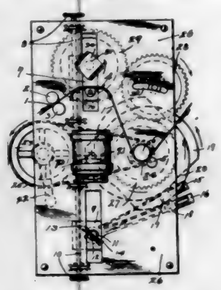
1,559,297. TELEPHONE SYSTEM. WALTER P. ALBERT, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 26, 1923. Serial No. 670,820. 15 Claims. (Cl. 179—27.)

1. In a telephone system, a plurality of cord circuits, a dialing circuit common to said cord circuits, an operator's telephone set, a key for each of said cord circuits, a relay controlled by one of said keys for connecting said set and said dialing circuit to a corresponding cord circuit, and means controlled by the operation of said relay



for rendering a corresponding relay in another of said cord circuits inoperative to connect said set and said dialing circuit with another of said cord circuits.

1,559,298. MOTION-PICTURE MACHINE. CHRISTIAN ANDERSEN, Portland, Oreg. Filed Sept. 17, 1920. Serial No. 410,864. 9 Claims. (Cl. 88—16.8.)

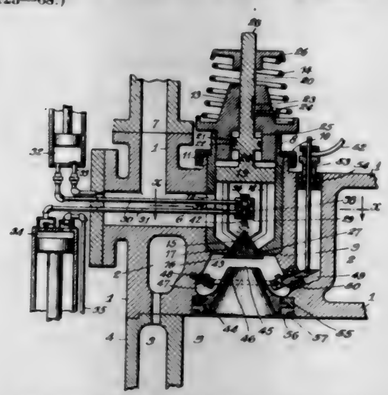


1. A motion picture machine of the character described comprising means for guiding and continuously moving a film, a plurality of reflectors, means for moving the reflectors in synchronism with the film, means for regulating the speed of the movement of the reflectors, means for controlling the distance between the film and the reflectors, and an objective lens adjustably mounted with reference to the film.

1,559,299. GOLF CLUB. LOUIS V. BARACH, Pittsburgh, Pa. Filed Nov. 3, 1924. Serial No. 747,506. 2 Claims. (Cl. 273—77.)

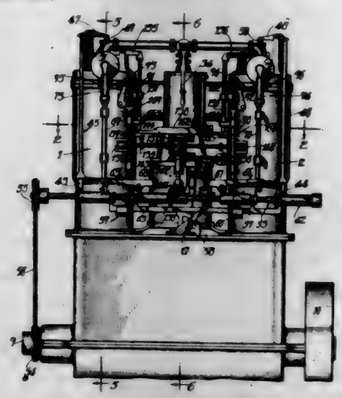
2. In combination, a golf club comprising a shaft provided with a shank at its lower end, a head consisting of a metallic body portion formed with a threaded socket adapted for engaging the shank of said shaft for securing the later to said head, a club member formed with a pocket mounted in said body portion, said body portion formed with a tongue extending into said pocket and with a lip overlapping the top of said club member, means extending through said lip and said club member and threadably engaging said tongue for securing the said club member in the mounted position, the front end of said body portion provided with a toe secured to the said club member substantially as described and for the purpose set forth.

1,559,300. INTERNAL-COMBUSTION ENGINE. JOHN H. BARNARD, Brooklyn, N. Y., assignor of one-fourth to Henry Noble Fletcher, Englewood, N. J. Filed June 27, 1923. Serial No. 647,963. 19 Claims. (Cl. 123—68.)



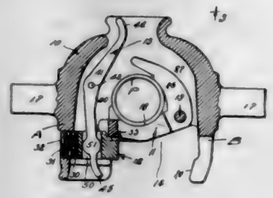
1. An internal combustion engine which comprises a power cylinder, a combustion chamber therefor, external means for compressing air for combustion, and supplying said air to the combustion chamber, a valve for controlling the admission of this air to said combustion chamber, means for spraying liquid fuel into said air in hollow conical form as they enter said combustion chamber.

1,559,301. INTERNAL-COMBUSTION ENGINE. JOHN H. BARNARD, Brooklyn, N. Y., assignor of one-fourth to Henry Noble Fletcher, Englewood, N. J. Filed June 17, 1924. Serial No. 720,572. 26 Claims. (Cl. 123—68.)



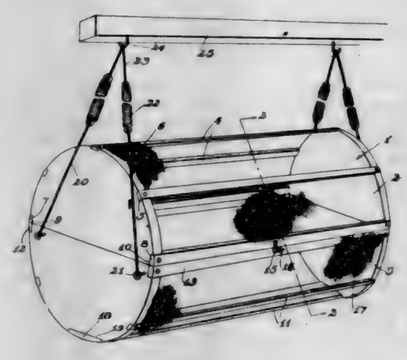
1. In an internal combustion engine which comprises power cylinders and pistons therein, means for supplying air under pressure thereto, control valves for said air and cams for opening said valves the profile of which causes changes in the amount of opening, which changes are proportional to the rate of advance of the power pistons.

1,559,302. ELEVATOR. RAY W. BARRETT and LEO T. KOPPL, Huntington Beach, Calif. Filed Jan. 21, 1925. Serial No. 3,764. 9 Claims. (Cl. 294—91.)



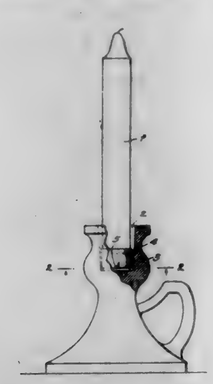
1. An elevator including, a body to receive a pipe, a closure for the body, means for locking the closure, and a single member for actuating the locking means, said member having parts at the front and rear of the body whereby it is operable from the front or rear of the body.

1,559,303. HAMMOCK. SARAH R. BATES, Prairie City, Oreg. Filed June 14, 1924. Serial No. 720,027. 2 Claims. (Cl. 5—97.)



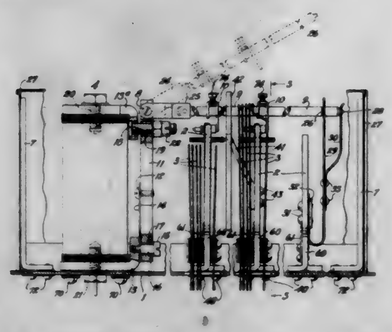
1. A hammock comprising an elongated body having upper and lower sections, each comprising solid end members and the end members of said upper section adapted to rest upon the upper edges of the end members of said lower section and cooperate therewith to provide heads for said body, said heads having recesses leading from their peripheral edge faces and providing seats, certain of said seats being disposed at the ends of meeting edges of the upper and lower head sections and the other seats being spaced circumferentially about the heads, strips extending between said heads and secured in said seats in snug fitting engagement with the walls of the seats, the strips secured in the seats at the ends of the meeting edges of the head sections contacting when the upper section is in a closed position, hinges connecting the contacting strips at one side of the body and cooperating fasteners carried by other contacting strips, a foraminous cover for said body secured to the peripheral faces of said heads and outer faces of said strips, and suspension means connected to the end members of said lower section.

1,559,304. CANDLE RING. EPHRAIM LEWIS BEARSE, Centerville, Mass. Filed Jan. 8, 1925. Serial No. 1,237. 1 Claim. (Cl. 67—23.)



An attachment for candles, which comprises a collar to be placed around the lower end of a candle and fit snugly thereon, the bottom edge of said collar being provided with a plurality of vertical slits, the material of the collar on one side of each slit being bent outwardly to engage in a socket into which the candle is inserted, the material on the opposite side of each slit being bent inwardly to engage with the candle, this construction permitting the collar to hold the candle therein and also to be positively held in the socket.

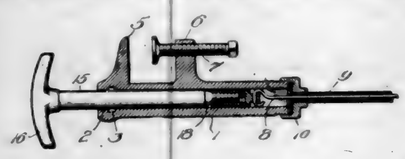
1,559,305. RELAY. WILLIAM O. BECK, Ridgefield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1924. Serial No. 701,128. 11 Claims. (Cl. 200—104)



1. A multiple switching relay comprising a plurality of contact springs, an electromagnet therefor, a member attached to and cooperating with the armature of said electromagnet, and a plurality of adjustable lugs on said member for controlling said contact springs.

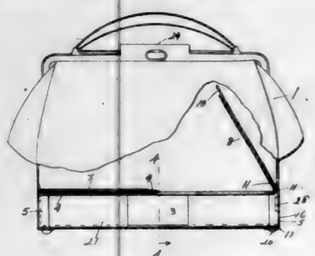
1,559,306. ACTUATING HANDLE FOR A RECIPROCATING MEMBER. HERBERT A. BERKMAN, Chicago, Ill., assignor to Zim Manufacturing Company, a Corporation of Illinois. Filed June 10, 1925. Serial No. 36,213. 4 Claims. (Cl. 24—39.)

1. In combination, a support having a passage therethrough, a handle having a stem extending slidably into said passage from one end of the latter, a member to be reciprocated extending into said opening from the other end, an expansible nut on said member, a screw-threaded



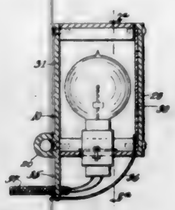
part on said stem adapted to enter said nut, and a wedge member on said stem adapted to enter the nut and expand it.

1,559,307. HAND TRAVELING BAG. ALBERT BERNARDO, Philadelphia, Pa. Filed May 22, 1924. Serial No. 715,050. 2 Claims. (Cl. 190—52.)



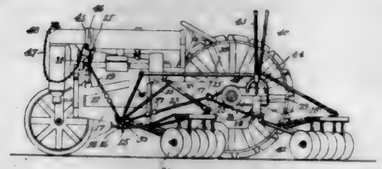
1. In a bag of the character described, rigid strips extending around the interior of the bag, posts supporting said strips, two sections hinged to certain of said strips so as to close upon the strips to separate the lower from the upper portion of the interior of the bag, and a receptacle adapted to slide in and out of the lower division.

1,559,308. AUTOMOBILE SIGNAL. RAYMOND E. BOYLE, Chicago, Ill. Filed Dec. 10, 1921. Serial No. 521,386. 2 Claims. (Cl. 177—329.)



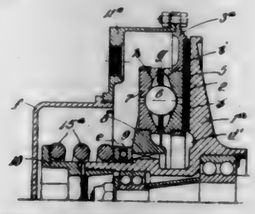
2. An automobile signalling device comprising a housing having a plurality of spaced side and intermediate walls forming a plurality of chambers; a removable rear wall on said housing, said wall being provided with a signal opening for each chamber; an electric light in each of said chambers for illuminating its respective opening; a forward wall removably mounted on said housing and provided with a downward extension; means for fastening said front and said rear walls in position; a covering plate leading from the bottom of said extension, to said rear wall to be held thereby, and means for retaining the covering plate in place at both the front and the rear of the housing, said extension and plate serving to house connections of said lights with their respective conductors.

1,559,309. TRACTOR HARROW. JAMES M. BROOKS, Atlanta, Ga. Filed Sept. 22, 1924. Serial No. 739,116. 12 Claims. (Cl. 97—47.)



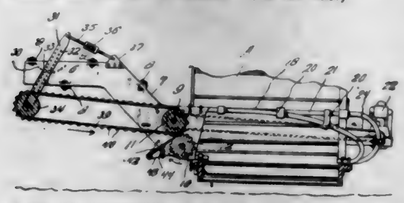
1. A plow attachment for tractors embodying a beam provided with a saddle midway its length, means for detachably clamping this beam up against the crank-case of the tractor, and soil-working means carried by said beam.

1,559,310. ELASTIC-HUB SHOCK ABSORBER. GEORGES BROULHIET, St. Etienne, France. Filed Mar. 21, 1924. Serial No. 700,865. 4 Claims. (Cl. 152—44.)



1. An elastic hub shock absorber for vehicles, comprising in combination with an axle, a hub having a friction surface, a wheel, a drum secured to said wheel coaxial with and displaceable in a radial direction relatively to said hub, a friction piece carried by said drum and in frictional engagement with said friction surface, a disc slidable on the hub enclosed in the drum, a set of seatings mounted on and internally of said drum, a second set of seatings on said disc, the two sets of seatings being oppositely disposed relative to one another, balls enclosed between said sets of seatings, resilient means for pressing said disc against the balls, and means for adjusting the set of the said resilient means, each of said seatings having a depression on its face the curvature of which diminishes the further it is from the axis of the hub.

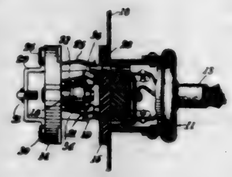
1,559,311. FLAX-GATHERING ATTACHMENT FOR BINDERS. LOTT D. BROWN, CHAUNCEY D. FRENCH, and FRANK MAHOOD, Dallas, Oreg. Filed Feb. 18, 1925. Serial No. 10,063. 7 Claims. (Cl. 55—66.)



1. In an attachment of the class described, a gathering means, an agitated guide shield associated with the gathering means for vibrating the grain gathered thereby to shake dirt from the grain.

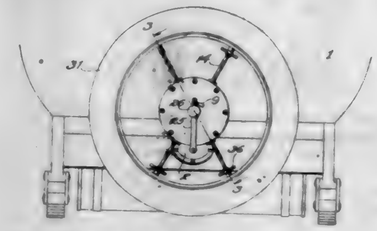
2. In a gathering attachment for binders, a belt having a corrugated outer surface, a corrugated roller associated with the belt, a guide shield hingedly mounted adjacent the corrugated roller, and means for agitating the plate all in the manner and for the purpose specified.

1,559,312. ELECTRIC-SIGNAL RECEPTACLE. JOSEPH O. CADIEUX, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Sept. 13, 1923. Serial No. 662,414. 11 Claims. (Cl. 177—339.)



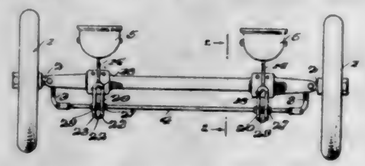
1. A hospital signal system apparatus comprising a member, a plurality of spring contact fingers carried thereby, and a spring pressed short circuiting contact, said member having perforations in line with said contact fingers and at least a portion of said short circuiting contact.

1,559,313. COMBINED HOLDER AND TOOL. JOHN W. COCHRAN, Millinocket, Me. Filed Jan. 21, 1925. Serial No. 3,872. 2 Claims. (Cl. 224—29.)



1. In combination with an automobile, of a combined spare tire carrier and rim expander therefor, comprising a support fixed on the automobile, a casing removably secured on the support, radially disposed arms movable in and projecting outward from the casing, a head block on each arm having a notch to engage the inner periphery of the spare tire carrying rim, rim engaging jaws having elements movable through the respective blocks, means between the jaws and blocks for holding the latter from swinging movement on the former, operating means for imparting a simultaneous longitudinal movement to the arms, actuating means for said operating means, and means for housing and locking the actuating means in inoperative position.

1,559,314. OPERATING MECHANISM FOR DIRIGIBLE HEADLIGHTS. GUSTAVE COOK, Gillett, Wis. Filed Mar. 17, 1925. Serial No. 16,234. 1 Claim. (Cl. 240—62.)

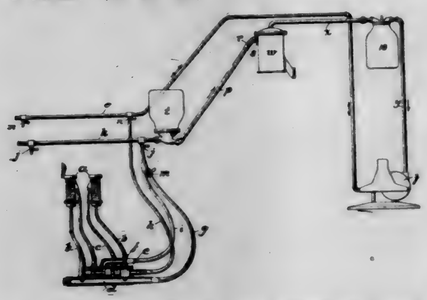


A motion transmitting mechanism for connecting a cross connecting rod of the steering mechanism of an automobile with a rotatably supported vertical headlight standard, said mechanism comprising a link having a pair of substantially parallel furcation, a horizontal pivot element attaching one end portion of said link

to the lower end portion of the standard, an upstanding stop lug on said one end portion of the link engaging with said standard to hold said link substantially horizontal, a clamp secured to said cross connecting rod, a vertical post carried by said clamp in position to extend between said furcations, a cap secured to the outer ends of said furcations in position to close the space between the outer ends of said furcations, a roller on each of said furcations, and a roller on said post in position to contact with the rollers on said furcations.

---

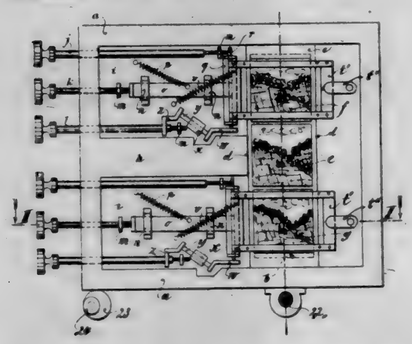
1,559,315. MILKING MACHINE. NORMAN J. DAYSH, New York, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 6, 1924. Serial No. 697,214. 8 Claims. (Cl. 31—58.)



1. In a milking machine, the combination with a milk pipe line and cocks therein adapted for connection with teat cups, a releaser connected with the milk pipe line, a source of suction, and an air pipe between the source of suction and the releaser; of means insuring against the passage of liquid to the source of suction, said means comprising a contrivance interposed in the milk pipe line and adapted to prevent abnormal flow of liquid to the releaser and a contrivance interposed in the air pipe adapted, upon the escape of a predetermined volume of liquid from the releaser into said pipe, to cut off the suction in said air pipe.

---

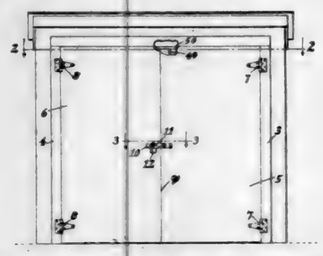
1,559,316. METHOD OF AND APPARATUS FOR THE MANUFACTURE OF DIAPOSITIVES FOR THE PROJECTION OF LIGHT PICTURES IN NATURAL COLORS. HERMANN DIERNHOFER, Zittau, Saxony, Germany. Filed June 15, 1922. Serial No. 568,652. 9 Claims. (Cl. 88—24.)



1. The method of manufacturing diapositives for the projection of illuminated pictures in natural colors upon a screen or the like, which method consists in first adjusting the negatives of the part pictures necessary for the multicolor projection abreast each other while projecting them on the screen one upon the other and observing the projections in regard to coincidence, fastening the negatives in the adjusted position abreast each other and making a common diapositive from said adjusted part pictures, said common diapositive showing the part diapositives abreast each other.

---

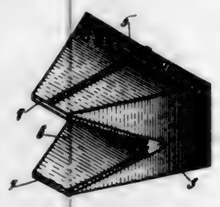
1,559,317. GARAGE DOUBLE-DOOR OPERATOR AND FASTENER. JOHN A. HARRIS, Los Angeles, Calif. Filed July 21, 1924. Serial No. 727,384. 3 Claims. (Cl. 292—262.)



1. A garage door comprising two door sections mounted to swing to and from each other, links pivotally connected at the tops of the door sections and extending inwardly and pivotally connected together at their rear ends, a guide arm mounted to swing on a vertical axis and connected to the rear ends of the links, a spring pressed double catch at the rear ends of the links, there being a rigid pin to be engaged by the catch and hold the door sections closed and there being a second rigid pin to be engaged by the catch and hold the door sections open, a hasp on one of the door sections to serve as a handle, and a connection between the hasp and the catch for releasing the catch from the pins to move the door sections.

---

1,559,318. FUEL SAVER. WILLIAM M. HAYWARD, Natick, Mass. Filed Apr. 26, 1923. Serial No. 634,666. 6 Claims. (Cl. 110—175.)

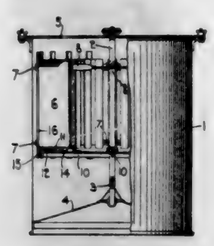


1. A device of the class described comprising a casing for attachment at its open outer end to the inner face of a fire door, said casing having substantially horizontal upper and lower walls, side walls, and an inner end wall formed as a reentrant angle portion joining said side walls and forming therewith and with said upper and lower walls a pair of horizontally disposed flat nozzle openings.

---

1,559,319. HONEY EXTRACTOR. WILLIAM HERROD-HEMPSALL, Luton, England. Filed Nov. 3, 1923. Serial No. 672,522. 1 Claim. (Cl. 210—65.)

In a centrifugal honey extractor, an inclosing vessel, a vertical driving shaft journaled therein, and a skeleton comb carrier secured on the said shaft and comprising upper radial arms provided with a retaining ring for the comb frames, lower radial arms, a lower retaining ring for the comb frames arranged above the level of the lower arms and secured to them, supporting rings for the comb frames spaced apart and secured to the



lower arms below the level of the lower retaining ring and between it and the said shaft, and spacing devices which retain the comb frames in the carrier in positions radial of the said shaft.

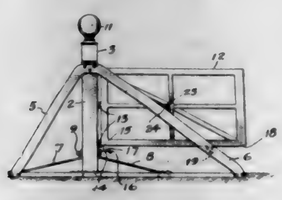
---

1,559,320. TOOTH CLEANER. ALBERT A. HIRSH, New York, N. Y. Filed Nov. 17, 1924. Serial No. 750,375. 2 Claims. (Cl. 132—93.)

1. A tooth cleaner comprising a strand of thread, a knob having a bore to receive the ends of the thread, said knobs being provided with intersecting bores and plugs extending through said intersecting bores for securing the thread in position within said knobs.

---

1,559,321. RAILWAY GATE. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed Mar. 15, 1924. Serial No. 699,545. 2 Claims. (Cl. 39—55.)



1. A railway gate comprising a hinge post, an abutment post, a gate swung at an inclination from said hinge post and having its lower free corner formed substantially horizontal, and a step support on the abutment post to cooperate with such corner portion of the gate, substantially as described.

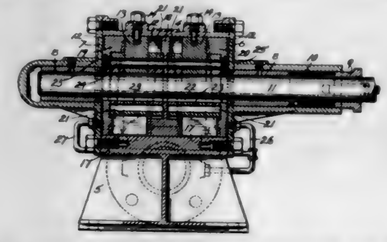
2. In a railway gate, hinge posts at opposite sides of the roadway, a central abutment post, laterally swinging gates hung on the hinge posts, and combined brace and guard members for the center post, substantially as described.

1,559,322. METHOD OF AND MEANS FOR THE PRODUCTION OF CIGARETTE RODS IN THE MANUFACTURE OF MACHINE-MADE CIGARETTES. PAUL MAX ERNST HOHN, Dresden, Germany, assignor to "Universelle" Cigarettenmaschinen-Fabrik J. C. Muller & Co., Dresden, Germany. Filed Apr. 22, 1924. Serial No. 708,155. 8 Claims. (Cl. 131—39.)

1. A method of making the tobacco rod for the manufacture of machine made cigarettes consisting in shaping tobacco to form a flat layer and forming the same into a closed ring.

---

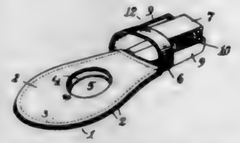
1,559,323. DUPLEX ROTARY PUMP. JOHN JACKSON, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Oct. 9, 1924. Serial No. 742,526. 12 Claims. (Cl. 103—139.)



1. A pump comprising a cylinder having inlet and outlet ports, means for dividing the interior of said cylinder into a plurality of annular chambers, axially movable means for segregating said ports, a rotor operative in said chambers in peripheral contact with the inner perimeter of said cylinder and having helical faces operating said segregating means and made up of a member for each chamber, spacers separating said members, and through bolts holding said members and spacers together, and means for operating said rotor.

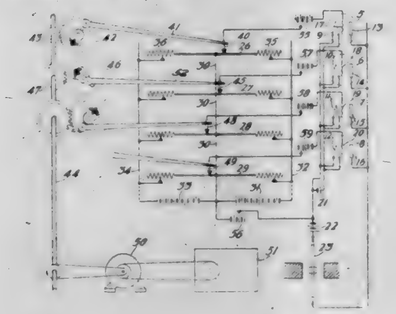
---

1,559,324. BUNION PROTECTOR. FRANK H. JENSEN, Everett, Mass. Filed Apr. 11, 1924. Serial No. 705,828. 1 Claim. (Cl. 128—153.)



A bunion protector comprising a yielding pad, a section of tape stitched to an end thereof to form the opening of a pocket, two sections of tape stitched at their ends to the first-named tape and crossing each other and stitched together at their midlengths, and a yielding pad attached to their midlengths and standing at substantially a right angle to the general length of the pocket.

1,559,325. MEANS FOR ANALYZING OR SYNTHESIZING ELECTRIC WAVES. FRANK B. JEWETT, Short Hills, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,342. 23 Claims. (Cl. 171—95.)

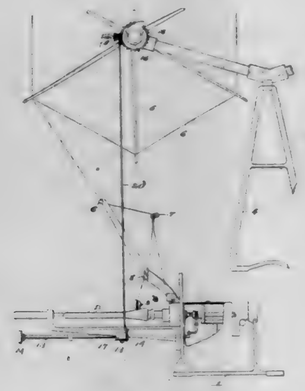


9. The combination of a plurality of vacuum tubes having a common output circuit and each having an input circuit, a common source of direct current potential for said input circuits, and an individual source of direct current potential for each of said input circuits.

17. In combination, a plurality of vacuum tubes, each having a control electrode, an adjustable impedance element for varying the potential of each of said control electrodes, and unitary means for varying said impedances.

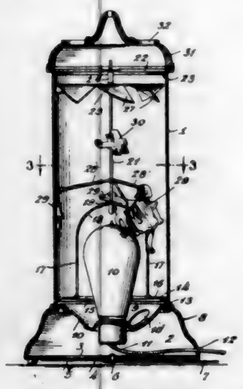
---

1,559,326. WINDING MACHINE. JAMES D. JOYCE, Philadelphia, Pa. Filed May 26, 1925. Serial No. 32,977. 1 Claim. (Cl. 242—18.)



In combination, a winding spindle, means for rotating said spindle, a rotatable rod for starting and stopping said rotating means, a swift or the like for carrying the filament to be wound upon said spindle, an annular ratchet carried on said swift, an arm mounted on said starting rod, a pawl loosely mounted adjacent to said ratchet and in engagement therewith, a rod connecting said arm and pawl to operate the pawl to engage the ratchet to impart a starting movement to the swift simultaneously with the starting of the spindle, and to reversely engage the ratchet when operated to stop the spindle and brake the movement of the swift, substantially as described.

1,559,327. LAMP. HISASHI KAYASHIMA and TOTARO MIYATA, New York, N. Y.; said Kayashima assignor to said Totaro Miyata. Filed May 8, 1924. Serial No. 711,781. 2 Claims. (Cl. 40—40.)



1. A lamp including a translucent shade, a frame within said shade, including an outer ring secured to the shade, an inner ring connected to the outer ring, standards connected with the inner ring and having converging upper ends, a socket member connected with the ends of said standards, a shaft having its lower end journalled in said socket member, a fan secured to the upper end of said shaft, arms connected with said shaft intermediate said fan and bearing, emblems carried by said arms, and means for illuminating the interior of said shade.

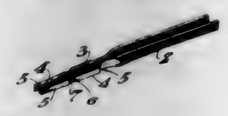
1,559,331. UMBRELLA GEAT. JOHN LUTZ, Philadelphia, Pa., assignor to S. W. Evans & Son, Philadelphia, Pa., a Firm composed of Samuel W. Evans, Wayne S. Evans, and Morton E. Evans. Filed Feb. 12, 1924. Serial No. 692,207. 2 Claims. (Cl. 135—32.)



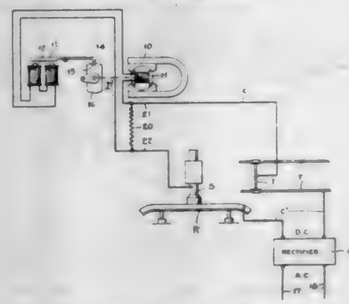
1. In an umbrella, a stretcher having an eye through the butt thereof, a plurality of U-shaped yokes composed of semicylindrical legs and crowns, said legs and crowns being of the same width throughout, the convexed portions of said legs being juxtaposed to each other, said yokes being positioned on said butt with their legs extending oppositely to each other in the longitudinal direction of the stretcher, and the crowns of said yokes having a common bearing in said eye.

1,559,332. FLEXIBLE UMBRELLA RIB. JOHN LUTZ and WAYNE S. EVANS, Philadelphia, Pa., assignors to S. W. Evans & Son, Philadelphia, Pa., a Firm composed of Samuel W. Evans, Wayne S. Evans, and Morton E. Evans. Filed Feb. 12, 1924. Serial No. 692,226. 1 Claim. (Cl. 135—31.)

As a new article of manufacture, an umbrella rib, having its groove at the location of the geat U-shaped and narrowed, and the groove from the geat to the butt end and from the geat to the tip end widened and U-shaped, said widened grooves being of substantially the same cross section and the side walls of said narrowed portion being higher than the side walls of the widened portions, whereby the rib is given a desired degree of flexibility.

---

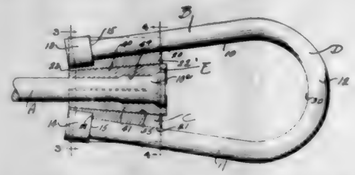
1,559,333. TRAIN-CONTROL SYSTEM. CLAUDE A. LYON, Chicago, Ill., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1923. Serial No. 659,504. 19 Claims. (Cl. 246—74.)



4. In a train control system, vehicle carried mechanism including a direct current relay and a vehicle carried circuit therefor, roadside mechanism including an alternating current source of energy, a rectifying means arranged for connecting said source of energy with so as to transmit the rectified energy to the vehicle carried circuit, and a resistor connected in parallel with said relay for rendering the same receptive to the rectified energy transmitted to the vehicle carried circuit.

---

1,559,334. CLAMP. ARTHUR W. MCCALLISTER, Shidler, Okla., assignor of one-half to Alexander R. O'Brien, Bartlesville, Okla. Filed Feb. 9, 1925. Serial No. 7,978. 14 Claims. (Cl. 24—126.)



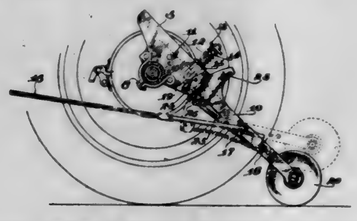
1. A clamp comprising a body, jaw clamping means associated with the body, said body at the opposite outer edges thereof having grooves therein opening outwardly along said sides in a convergent relation, and a clevis including side legs having portions thereof convergently disposed for detachable connection in the convergent grooves of said body.

1,559,335. METHOD OF FILLING THE INTERSTICES BETWEEN THE UNITS OF A PAVEMENT OR FLOOR. BERTRAM S. MCCONNELL, Indianapolis, Ind., assignor to Peter C. Reilly, Indianapolis, Ind. Filed Oct. 4, 1921. Serial No. 505,264. 9 Claims. (Cl. 94—23.)

1. That method of filling the joints between contiguous paving or flooring elements, which consists in supplying said joints with a hydrocarbon material normally non-fluent under atmospheric temperatures, and temporarily softening the same when in situ to cause such material to coalesce and to bond the contiguous faces of the elements aforesaid.

---

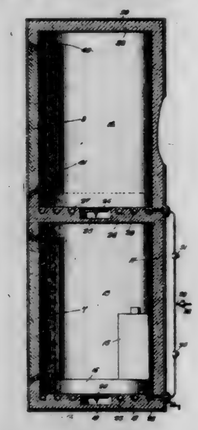
1,559,336. ANTISKIDDING DEVICE. OWEN A. MCELFISH, Cumberland, Md. Filed Feb. 16, 1925. Serial No. 9,686. 3 Claims. (Cl. 188—5.)



1. In a device of the class described, a clamp adapted to be secured to an axle, an arm pivoted to said clamp and composed of two hinged sections, a spring for normally holding said sections in alignment, cooperative guiding means on said clamp and one of said sections, and a wheel journaled on the free end of said arm.

---

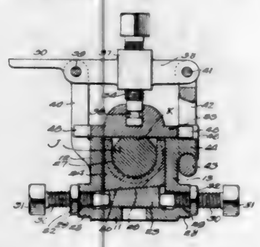
1,559,337. FIRELESS COOKER AND HEATER. MALCOLM J. MCFARLANE, New Orleans, La. Filed June 7, 1924. Serial No. 718,639. 2 Claims. (Cl. 126—39.)



1. A fireless cooker and heater comprising a thin metallic casing, a liner fitting in the casing and including integral side, top and bottom walls, said bottom wall having in its upper side a centrally disposed cavity and a serpentine groove thereabout, both said cavity and groove opening through the upper side of the bottom wall, a gas burner seated in the cavity, means housed in the liner and extending in the casing for supplying fuel to the gas burner, and an electric resistance coil seated in said groove and connected through the liner and casing to an external source of energy.

---

1,559,338. DOLLY-HAMMER CYLINDER FRONT HEAD. MARTIN MCHALE, Anyox, British Columbia, Canada. Filed Sept. 18, 1923. Serial No. 663,438. 4 Claims. (Cl. 76—5.)



4. In a drill bit sharpening machine, a dolly having a head and a collar at its opposite ends a dolly hammer cylinder front head, an adjustable and removable bearing for the dolly mounted in the front head, means for effecting adjustments of said bearing to compensate for wear thereon and on the dolly, said means comprising a wedge block, interengaging wedge faces on the bearing and wedge block, devices for operatively moving the wedge block to obtain said adjustments, and guide means for the bearing provided on the front head body, certain of said guide means constituting stops for engagement with the head and collar of the dolly for limiting the movement of the dolly whereby to prevent engagement of the same with the bearing.

---

1,559,339. EMERGENCY SURGICAL SPLINT. HARVEY C. MASLAND, Philadelphia, Pa. Filed July 27, 1922. Serial No. 577,810. 1 Claim. (Cl. 128—85.)

An emergency splint consisting of two opposed pairs of splint arm sets of bendable metal, each set being adjustable in length and adjustable independently of each other, each set being readily bendable in emergency to fit the surface curves of a fractured part, terminal strap brackets at the distal ends of the opposing splint arm sets, straps for said brackets to hold the ends of the opposing splint arm sets in adjusted position, and additional strap brackets adapted to be positioned along the length of the opposing splint arm sets for straps to bind a limb to the opposing splint arm sets at any desired position.

1,559,340. IRRITANT PRODUCT FROM THE RHUS PLANT AND PROCESS OF OBTAINING THE SAME. PETER MASUCCI, Norwood, Pa., assignor to H. K. Mulford Company, Glenolden, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1923. Serial No. 632,528. 6 Claims. (Cl. 167—4.)

5. As a new article of manufacture, a solution in a fixed vegetable oil of the irritant or vesicant principle of the Rhus plant, having the physiological and therapeutic characteristics of said plant.

---

1,559,341. RUST-PRODUCING COMPOUND. ROYAL MATTICE, Bethlehem, Pa. Filed Oct. 25, 1924. Serial No. 745,817. 3 Claims. (Cl. 148—22.)

3. A rust producing compound comprising magnetized iron filings, ammonium chloride and ammonia.

---

1,559,342. METHOD OF AND APPARATUS FOR PURIFYING MOLTEN METAL. ROYAL MATTICE, Bethlehem, Pa. Filed Aug. 21, 1925. Serial No. 51,657. 10 Claims. (Cl. 266—84.)

1. An apparatus for use in purifying molten metal comprising a container having aluminum and lime therein, the aluminum being of coarser mesh than 150.

---

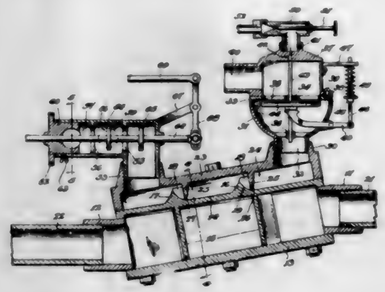
1,559,343. PROCESS FOR THE PREPARATION OF A DYED RUBBER PRODUCT. DIEDERICUS JOHANNES MEYERINGH and PETRUS CAREL WIJNAND, Amsterdam, Netherlands. Filed Dec. 26, 1923. Serial No. 682,824. 2 Claims. (Cl. 18—50.)

1. A process for the production of rubber dyed throughout, comprising treating raw rubber in sheet form with a solution of coloring matter the solvent in the coloring matter solution being capable of penetrating into and throughout the rubber treated, the raw rubber being treated with sulphur, and the resulting product being vulcanized with actinic rays.

---

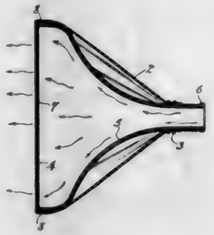
1,559,344. FUEL-CRACKING DEVICE FOR INTERNAL-COMBUSTION ENGINES. FRANK E. MODLIN, Jr., Burbank, Calif. Filed Mar. 13, 1925. Serial No. 15,402. 10 Claims. (Cl. 48—107.)

2. A fuel cracking device including a heated gasifying chamber, adapted for connection with an engine intake and having a heated wall, means for feeding liquid fuel and air to said chamber, means in said chamber for forming the fuel into a film in contact with said wall whereby the fuel is subjected uniformly to the heat and converted into a vapor mingling with the air to form a fuel gas, said second mentioned means defining a substantially restricted passage for raising the rate of flow of the vapor to a high velocity, and means for subsequently diluting the vapor with air to form a fuel mixture.



---

1,559,345. SMOKE-PRINTING DEVICE. PATRICK J. MOLONEY, Brooklyn, N. Y. Filed July 14, 1925. Serial No. 43,577. 1 Claim. (Cl. 41—29.)



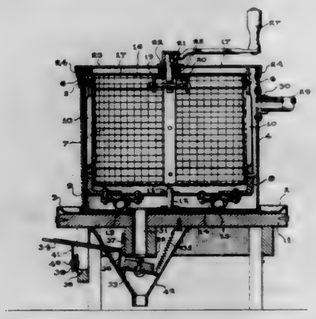
A smoke printing device, comprising a hollow body substantially funnel-shaped and formed at the small end with a mouthpiece whereby a person may blow tobacco smoke therein, and a removable printing plate mounted on the large end of the body, said printing plate having a flange fitting the body, and a series of perforations outlining the matter to be printed whereby when a piece of cloth is laid on said plate and smoke is forced through said perforations, said smoke will also pass through the cloth and discolor small portions of the cloth adjacent the perforations whereby a printing effect will be produced.

---

1,559,346. DISHWASHING MACHINE. JOHN N. MOORE, Thorndale, Tex. Filed Sept. 22, 1924. Serial No. 739,132. 1 Claim. (Cl. 141—9.)

In a dish washing apparatus, the combination with a stand and a casing supported thereon, of a frame rotatably supported within the casing and having upstanding arms, a basket fitted within the frame and secured to the arms, cross bars with notches in their extremities detachably receiving the upper terminals of the frame arms, a U-shaped bracket depending from said cross bars connected to the frame arms, cross bars on the casing with their extremities detachably engaging with the margin of the casing, a shaft passing through the bars

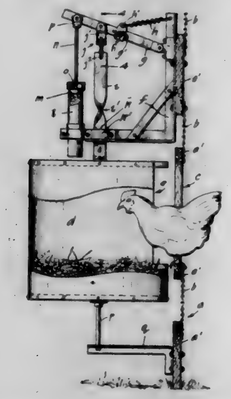
on the basket and having its lower end fixedly connected with depending terminals of the bracket, said shaft rotatably passing through the bars on the casing, and



means connected to the upper end of the shaft for rotating the same, thereby rotating the frame and basket as one body.

---

1,559,347. SEGREGATING NEST. JOHN A. MOORE, Portland, Oreg. Filed Apr. 30, 1925. Serial No. 26,959. 3 Claims. (Cl. 119—21.)



1. In a device of the character described, a bracket, a lever-arm mounted thereon, means connected to said lever-arm adapting the latter to sustain a predetermined weight, a vertically movable rod pendent from said lever-arm, means for causing the partial rotation of said pendent rod during its vertical movement, an enclosed nest suspended from said rod, said nest provided with an opening, means restraining the sudden movement of said lever-arm, whereby additional weight imposed upon said nest will cause its partial rotation and thus relatively move its opening from one position to another, slowly.

---

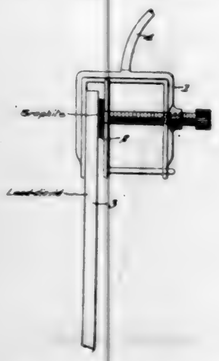
1,559,348. OIL-WELL HOOK-ON DEVICE. MORRIS C. MOORE, Luling, Tex. Filed May 18, 1925. Serial No. 31,252. 4 Claims. (Cl. 254—135.)

1. The combination with a reciprocatory member and an anchor adjacent the same; of a chain guide connected to said reciprocatory member to be reciprocated thereby, a second chain guide adapted for connection to a load to be pulled toward said reciprocatory member, a chain anchored at one end by means of said anchor, said chain extending from the anchor to the second named chain guide and being engaged with the same, the chain then extending to the first named guide, being engaged with the latter and having its other end extending from the same, said other end being intended to be pulled to take

up slack between the two chain guides upon each movement of the reciprocatory member toward the load, and means for establishing a positive pulling connection between the chain and the first named chain guide upon movement of the reciprocatory member away from the load.

---

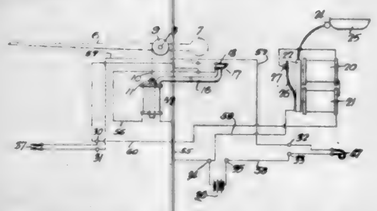
1,559,349. ELECTRICAL CONNECTION. WILLIAM ROY MOTT, Decorah, Iowa, assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,724. 7 Claims. (Cl. 204—4.)



1. A low resistance electrical connection, comprising graphite compressed upon a conductive metallic oxid.

---

1,559,350. AUTOMATIC SAFETY GATE. FREDERICK W. MUCHMORE, Philadelphia, Pa.; Walter R. Faries, administrator of Frederick W. Muchmore, deceased, assignor to W. Wayne Muchmore, Boston, Mass. Filed Jan. 27, 1922. Serial No. 532,218. 4 Claims. (Cl. 246—125.)

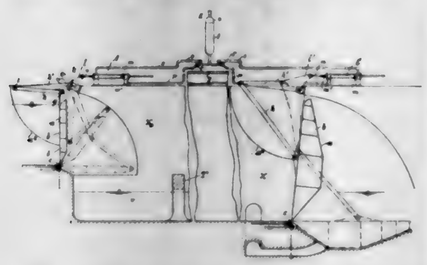


1. The combination with a housing, of a shaft journaled in the housing, a solenoid operatively connected with and constituting motor means for rocking the shaft, a source of electrical energy, a switch controlling the connection between the solenoid and said source, a second switch controlling an independent circuit including the source of energy and the solenoid, and a mechanical

connection between the solenoid and said first switch for closing said switch when the solenoid is energized by the independent circuit and adapting the mechanism for compact assemblage within said housing.

---

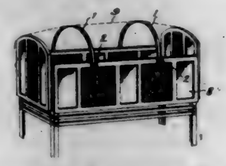
1,559,351. WATER GATE. ARTHUR HUGO MÜLLER, Blankenese, near Hamburg, Germany. Filed Apr. 13, 1925. Serial No. 22,837. 6 Claims. (Cl. 61—22.)



1. In a water gate for sluices, canal locks, weirs and the like, the combination of a flap gate opening in the direction of water flow and arranged to be opened by the pressure of the water controlled thereby, a fluid brake to absorb the work done by the water operating the flap gate, a hydraulic accumulator for collecting the energy from the brake, and means for retransmitting the collected energy to the flap gate.

---

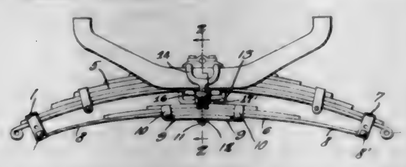
1,559,352. ATTACHMENT FOR CRIBS, PERAMBULATORS, AND THE LIKE. VIRGINIA P. NELSON, New York, N. Y. Filed Mar. 13, 1925. Serial No. 15,418. 3 Claims. (Cl. 135—10.)



1. An attachment of the character described, comprising a pair of coiled brackets, and a flexible strip having coiled ends fitting in the coiled brackets.

---

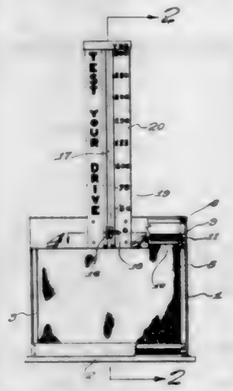
1,559,353. VEHICLE SPRING. ISOM JERRY NOBLE, Higginson, Ark. Filed Oct. 6, 1924. Serial No. 742,042. 2 Claims. (Cl. 267—45.)



1. The combination with a vehicle spring, of an auxiliary spring arranged beneath the same and having its ends operatively connected with the first mentioned spring, a plate secured to the underface of the auxiliary spring and provided with wings at one side thereof which extends along the edges of the leaves of the auxiliary spring, a bolt passing through the auxiliary spring and plate, and a U-shaped member carried by the bolt and interposed between the auxiliary spring and the first mentioned spring.

---

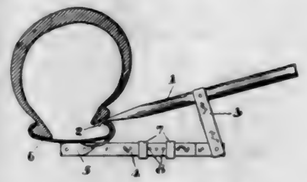
1,559,354. GOLF-DRIVE TESTER. CHARLES W. NORRIS, Chicago, Ill. Filed Jan. 10, 1923. Serial No. 611,812. 4 Claims. (Cl. 265—20.)



1. In a device as set forth, a supporting frame, an impact curtain having its lower edge anchored to said frame, an indicator hand and means connected to the upper movable end of said impact member for striking and operating said indicating hand.

---

1,559,355. TOOL FOR PUTTING ON OR REMOVING TIRES FROM THE RIMS OF VEHICLES. ROBERT WILLIAM OAKLEY, Toronto, Ontario, Canada. Filed Apr. 21, 1924. Serial No. 707,983. 7 Claims. (Cl. 157—6.)



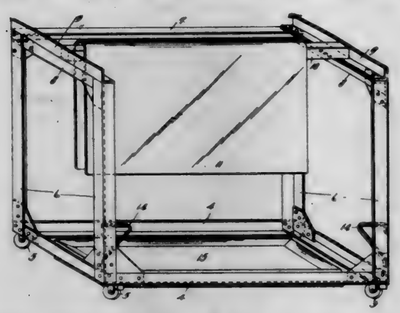
1. In a tool for putting on or removing tires from the rims of vehicles, the combination of a lever having a wedge-shaped end adapted to be engaged with the edge of the rim when the tire is to be placed in position or inserted between the tire and edge of the rim when the tire is to be removed; a bar; a link having one end pivotally connected intermediate the ends of said lever, the other end of said link being pivotally connected with one end of said bar; and a hook member pivotally connected with the other end of said bar, said link, bar and hook member being adapted to occupy a position when the tire is to be placed in position with the hook member in engagement with the rim adjacent the wedge-shaped end, or a position, when a tire is to be removed, with said link bar and hook member in substantially a straight line at right angles to the lever.

---

1,559,356. TRUCK FOR HANDLING RUGS OR THE LIKE. WALTER E. OLSON, Chicago, Ill. Original application filed Sept. 24, 1921, Serial No. 502,898. Divided and this application filed July 15, 1922. Serial No. 575,420. 1 Claim. (Cl. 211—15.)

An apparatus of the class described comprising a wheeled base; four supporting posts supported on and projecting upwardly therefrom; connecting bars arranged between the upper portions of said posts upon three sides of said truck, the fourth side being left open;

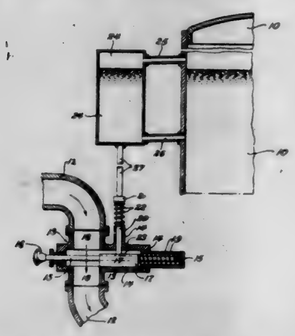
opposed angle irons arranged across the tops of the opposed closed sides of said truck, said angle irons being arranged with one leg projecting horizontally and inwardly and the other leg projecting vertically; and a



support consisting of a wooden bar of a length to span the space between said angle irons and having a line of staples driven in the top and upper corners thereof, substantially as described.

---

1,559,357. AUTOMATIC GAS CUT-OFF. THOMAS A. O'NEILL, New York, N. Y. Filed Feb. 25, 1924. Serial No. 695,064. 7 Claims. (Cl. 122—504.)

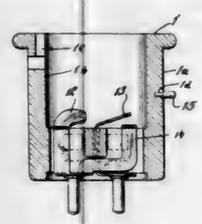


1. In a device of the class described, the combination with a boiler, a burner for heating said boiler, a valve, manually operable means for opening said valve to permit fuel to flow to said burner, means for holding said valve in open position when the level of water in the boiler is above a predetermined height including a movable tank in open communication with said boiler, and means operable for closing said valve when the level of water reaches a low level.

---

1,559,358. VACUUM-TUBE ADAPTER. LOUIS G. PACENT, Winfield, N. Y., assignor to Pacent Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 1, 1925. Serial No. 27,126. 3 Claims. (Cl. 173—344.)

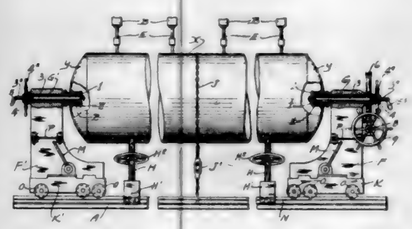
1. A vacuum tube adapter comprising a cup like socket member, a plurality of contact prongs attached to and projecting from the bottom of said socket member and arranged to engage the resilient contacts of a vacuum tube socket into which said adapter may be inserted, a plurality of slots extending through the bottom of said socket member, a plurality of leaf spring conductors each of which is attached, individually, to one of said contact prongs and extends individually through one of said slots to the interior of said socket member, the end portion of each of said leaf spring conductors which is inside said socket member being so positioned as to engage, individually, one of the contact prongs of a vacuum tube which may be inserted in said



socket member, the arrangement being such that each contact prong of the vacuum tube is electrically connected through one of said leaf spring conductors, individually, to the proper one of said contact prongs forming a part of said adapter.

---

1,559,359. MACHINE FOR DRILLING OR REAMING BOILER SHELLS. FREDERICK O. PAHMEIER, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed May 18, 1923. Serial No. 639,798. 20 Claims. (Cl. 77—22.)



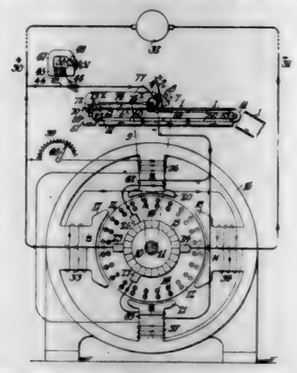
1. A machine for drilling or reaming boiler shells, comprising rotatable tool spindles, and means for supporting a boiler shell at the centers of the heads or end pieces of the shell during the operation of forming holes in the shell with the tools on said spindles.

---

1,559,360. METHOD OF AND MEANS FOR ELECTRIC WELDING. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Mar. 8, 1922. Serial No. 541,923. 13 Claims. (Cl. 219—8.)

1. In electric arc welding apparatus; the combination with feeding means arranged to feed the work and a metallic electrode toward each other, at a uniform predeterminable rate; of a single rotor arranged to drive said feeding means; said rotor having a circumferential series of conductors; means supplying constant potential direct current to a circumferentially limited motor sector of said series of rotor conductors, to rotate said rotor; means constituting the remaining circumferential sector of said series of rotor conductors, a generator sector, in the same circumferential zone with said motor sector; a field for said rotor, including two main poles and two auxiliary inter-poles; a shunt field winding on each of said poles; opposed series windings on said inter-poles; a welding arc circuit, including said work, electrode, series field windings, and rotor; and an adjustable field

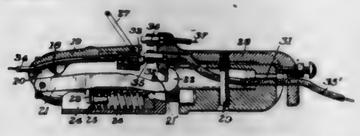
rheostat in the shunt circuit including said shunt field windings; said rheostat being adjustable to vary the energy in said arc circuit; and said rotor and its field



being automatically operative to regulate the energy in said arc circuit and compensate for fluctuations in resistance at the arc.

---

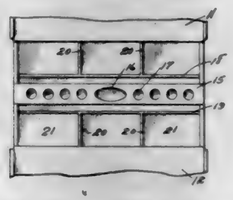
1,559,361. STORAGE-BATTERY-CHARGING PLUG. WAYBARD D. PARKER, Cleveland, Ohio. Filed Aug. 21, 1920. Serial No. 405,010. 19 Claims. (Cl. 173—328.)



2. In a device of the character described, a socket member having an electrical contact carried thereby, a plug member having a second electrical contact carried thereby for cooperation with said first mentioned contact, said contacts being adapted to form a part of an electrical circuit, means for holding said contacts yieldingly in engagement, and circuit-controlling means adapted to be brought into operative engagement before said contacts can be separated, substantially as described.

---

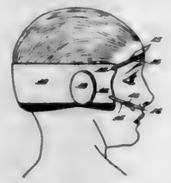
1,559,362. FLAGMAN'S KIT. JOHN T. PARKINS, Mandan, N. Dak. Filed July 21, 1924. Serial No. 727,323. 2 Claims. (Cl. 246—488.)



1. A flagman's kit comprising a receptacle, a sectional cover therefor, centrally disposed solid partition arranged longitudinally of the receptacle, and having a series of openings designed to receive a torpedo container and fuses, said partition projecting above the sides of the receptacle and constituting a support on which the sections of the cover repose when closed, and a plurality of partitions dividing the receptacle into longitudinal and transverse compartments to accommodate other articles used by the flagman.

---

1,559,363. HAIR-TRIMMING GUIDE. JEAN PARISALE, Richmond Hill, N. Y. Filed Feb. 6, 1925. Serial No. 7,355. 2 Claims. (Cl. 132—45.)



1. A guide for facilitating the trimming of bobbed hair comprising a substantially semi-circular bandeau, a parallel series of comb teeth at the lower edge of said bandeau having angular inwardly projecting terminals and means for retaining said device in place on the head, said bandeau having outwardly pressed portions at diametrically opposite sides for accommodating the ears.

---

1,559,364. INFLATABLE BALL. DEWEY O. PEARCE, Boise, Idaho. Filed Apr. 5, 1923. Serial No. 630,010. 2 Claims. (Cl. 273—65.)

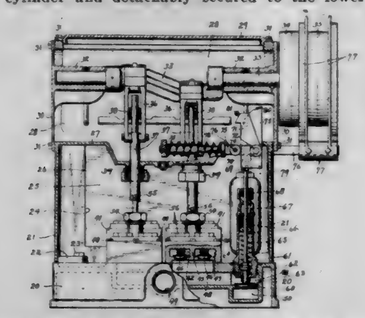
1. An inflatable ball comprising a casing having a slit therein, a plurality of hooks carried by said casing on one side of the slit, a plurality of eye members mounted on the casing on the opposite side of the slit, gasket portions carried by the casing on the inner side adjacent the hooks and eye members to present a smooth inner surface, a closing flap carried on the inner side of the casing to close over the slit, and an inflatable portion within the casing.

---

1,559,365. PUMP. BYRON J. PEPPER, Fort Wayne, Ind., assignor to S. F. Bowser & Company Inc., Fort Wayne, Ind., a Corporation of Indiana. Filed Apr. 23, 1921. Serial No. 463,848. Renewed Sept. 17, 1925. 18 Claims. (Cl. 103—125.)

1. A pump comprising a cylinder open at its top; a casing forming an integral closed chamber at the top of said cylinder; a discharge valve in the top wall of said casing at the highest part of said chamber; a pis-

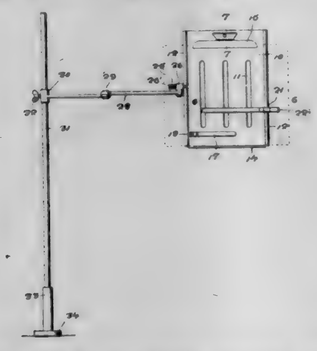
ton operatively mounted in said cylinder and a base member having a chamber for receiving the lower end of said cylinder and detachably secured to the lower face



of said casing so as to permit removal of said cylinder and casing intact and expose the lower end of said cylinder.

---

1,559,366. COPYHOLDER. CHARLES B. PHELPS, Jr., Memphis, Tenn. Filed Aug. 1, 1923. Serial No. 655,076. 1 Claim. (Cl. 120—28.)



A copy holder of the character described comprising a panel having its opposite side edges curved over longitudinally extending cylindrical bar members and providing beads thereon, one of said cylindrical bar members having a transversely extending shaft member thereon, bearing blocks received on the transversely extending shaft, a retractile spring interposed between the outer end of the transversely extending bar member and the corresponding side edge of the bearing blocks, and supporting means positioned on the lower side of the bearing blocks whereby the panel may be manually turned at any angle desired.

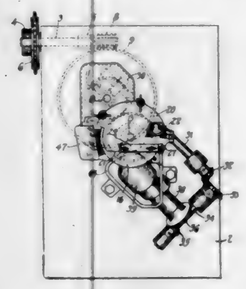
---

1,559,367. CEMENTING MACHINE. HERBERT R. POLLEYS, New Haven, Conn., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed Apr. 11, 1925. Serial No. 22,292. 18 Claims. (Cl. 12—80.)

1. In a cementing machine, an inclined support for the sole portion of a footwear article, means extending above the support whereby a coat of cement may be applied to the lower portion of the upper of the article as the latter is rotated on the support, and means for supplying cement to said last means.

2. In a cementing machine, an article support, means whereby a band of cement with a thickened edge or bead may be applied to an article on the support, and means for supplying cement to said last means.

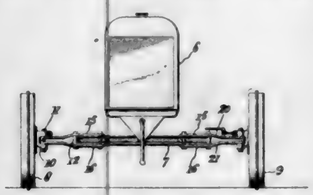
12. In a cementing machine, a footwear article support, means whereby a cement coating may be applied to an article thereon, means whereby a cement bead may



be applied to the edge of the coating, and means adjacent said last means and supplied with cement therefrom whereby an additional portion of the article may be cement coated.

---

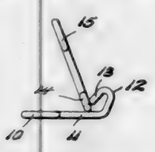
1,559,368. EXTENSION AXLE. CHARLES M. POOLE, Waco, Tex., assignor, by mesne assignments, to Texas La Crosse Company, a Corporation. Filed Apr. 27, 1925. Serial No. 26,214. 2 Claims. (Cl. 301—128.)



1. An extension axle for attachment to the usual motor vehicle axle having a coupling eye at its end comprising a pair of legs for adjustably fitting against the upper and lower sides of said usual axle, means for clamping the inner ends of the legs against the axle when the legs are adjusted, and locking means engageable with said coupling eye of said axle and adjustably engaging both legs of the pair for securing the legs in adjusted position, said legs projecting beyond the end of said usual axle and having a coupling eye therein corresponding to the coupling eye of said usual axle.

---

1,559,369. HOOK-AND-EYE FASTENER. JACOB POOLE, Hamden, N. Y. Filed Jan. 16, 1924. Serial No. 686,568. 1 Claim. (Cl. 24—228.)

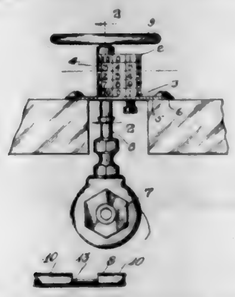


A hook and eye fastener consisting of a hook member formed of a single piece of wire bent at its central portion and curved at its ends to form eyelets, the opposite portions of the wire extending from said eyelets in straight lines to form a shank and then extending upwardly from the plane of the shank and then bent and extending downwardly at an acute angle to said plane to form an overlying hooked bill, the end of which is

spaced from the shank a distance substantially equal to the diameter of the wire forming the eye member, and an eye member located in one plane also formed of a single piece of wire which has its central portion bent to form an elongated eye, the major axis of which is slightly greater than the width of said bill and the minor axis slightly greater than the thickness of the wire composing said bill, the wire members extending from said eye and curved at their ends to form eyelets.

---

1,559,370. PERMUTATION LOCKING MEANS FOR VALVES. MICHAEL POSTEMSKY, Brooklyn, N. Y. Filed July 1, 1924. Serial No. 723,491. 2 Claims. (Cl. 70—53.)



1. In combination with a rotatable valve stem, of a permutation lock, including movable discs and a barrel on which said discs are adapted for rotation, said discs and barrel together presenting an opening corresponding in size and shape to the normal transverse size and outline of the valve stem, said valve stem throughout the area of the movable discs being cutaway in part to permit free rotation of said discs when the valve stem is in a particular position relative to said discs.

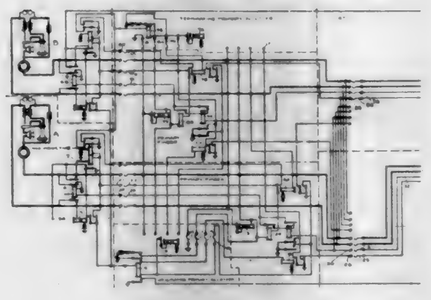
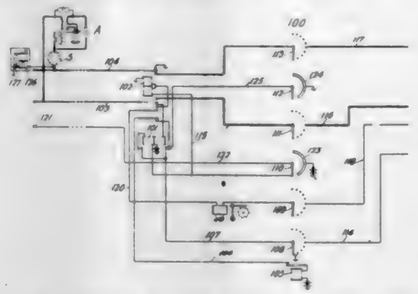
1,559,371. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,207. 11 Claims. (Cl. 179—18.)



1. In a telephone system, a plurality of telephone lines, a plurality of non-numerical switches of the step by step type, a plurality of trunks, means for causing a non-numerical switch to seize a calling line, means to cause a second non-numerical switch having wipers to successively test said lines and to seize a wanted line, and means including a trunk circuit and said non-numerical switches only for interlinking said last mentioned switches.

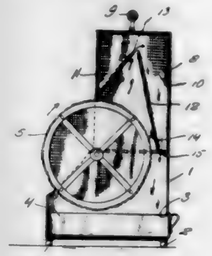
1,559,372. TELEPHONE-EXCHANGE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1921. Serial No. 434,901. 16 Claims. (Cl. 179—6.3.)



1. In a telephone exchange system, a plurality of subscribers' lines, a group of connecting circuits and switches for establishing a talking connection from one of said lines to another, a service charging device asociated with each of said lines respectively, sending mechanism for controlling said switches, electrically operated controlling mechanism individual to said sending mechanism for governing the operation of said charging devices, and means operative after completion of said connection for automatically asociating said sending mechanism and asosciated controlling mechanism with any one of the group of connecting circuits employed in establishing said connection.

---

1,559,373. FLYCATCHER. ANNETT PURVIS, Shreveport, La. Filed Nov. 19, 1924. Serial No. 750,827. 1 Claim. (Cl. 43—111.)



A fly catcher comprising a casing, a drum journaled for rotation in the upper portion thereof, a housing of foraminous material mounted upon the casing and receiving the uper portion of the drum, foraminous sections arranged in anti-clined relation, and located under the top of the coacher, the upper edges of the sections being spaced, one of said foraminous sections being located above the drum, and the other foraminous section extending from a line above the drum to a line approximately midway betwen the upper and lower sides of the drum, the lower edge of the last mentioned foraminous section being spaced from the adjacent side wall of the housing.

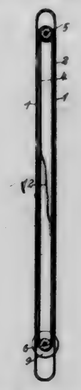
1,559,374. CALCULATING MACHINE. DAVID RABANETE, Barcelona, Spain. Filed Oct. 17, 1924. Serial No. 744,261. 4 Claims. (Cl. 235—86.)

3. In a machine for multiplication and division, a case having a series of transverse slots, a series of endless ribbons arranged side by side, two axles loosely carry-

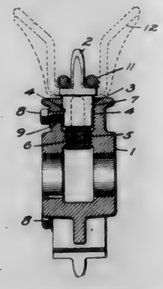
ing reels upon which the endless ribbons are stretched, one of the reels of each ribbon being arranged for operation from outside the case for moving the endless ribbons, the ribbons having tables printed upon them in each of which thre is a central column formed by the



figures 0 to 9 and two lateral columns which indicate the products of each one of such figures multiplied by a multiplier corresponding to the particular table, a tie member connected across each of the endless ribbons to limit movement thereof.

---

1,559,375. CHAIN WHEEL. JOSEPH S. REID, Olean, N. Y., assignor to Clark Brothers Company, Olean, N. Y., a Corporation of New York. Filed Jan. 24, 1922. Serial No. 531,365. 1 Claim. (Cl. 74—31.)



A chain wheel including a hub, a plurality of integral radial projections extending outwardly therefrom, each of said projections having a radial bore therein extending into the hub, said bore being smooth at the outer end and threaded only at the inner end thereof, adjustable teeth, each having a cylindrical shank provided with a flattened portion, the inner end only of which shank is threaded to turn in the threaded portion at the inner end of the corresponding bore, the smooth outer end of each shank being closely fitted to the smooth outer end of the bore and supported laterally thereby, and locking screws extending into the sides of the radial projections and engaging the flattened portions of the shanks of the teeth for locking the latter in their adjusted positions.

---

1,559,376. VENTILATOR. ANDREW L. RIKER, Fairfield, Conn. Filed Mar. 10, 1923. Serial No. 624,127. 1 Claim. (Cl. 98—31.)

In combination with a structure having an opening, a ventilating closure comprising an apertured plate to cover said opening, the complete margin of said plate being adapted to engage said structure beyond said opening, means for securing said plate to said structure, an apertured plate having a continuous, integral flange secured to the plate first mentioned and spacing said

plates apart, the apertured plate with continuous, integral flange being adapted to lie wholly within said opening at greater or less distance from the wall thereof, and the apertured plate with margin including integral guide ways constituting the border of said margin, and a slotted slide in said guide ways.

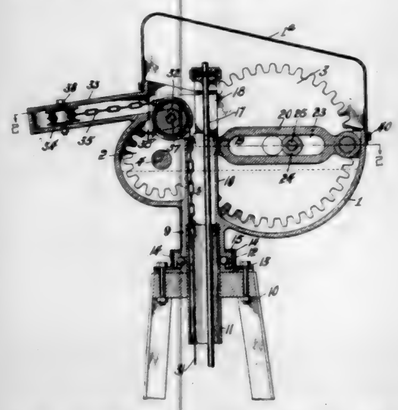
---

1,559,377. VENTILATOR. ANDREW L. RIKER, Fairfield, Conn. Filed Apr. 18, 1923. Serial No. 631,785. 5 Claims. (Cl. 189—61.)

1. In combination with a structure having an opening and walls adjacent said opening, a ventilating closure comprising spaced apart louvers adapted to cover said opening, each louver including a plate having apertures and flanges adjacent said apertures and a double flange attached to said plate and constituting the margin of each louver, each double flange comprising a continuous flange adapted to lie in said opening and a continuous flange adapted to be contiguous with a wall of said structure, an apertured slide associated with one of said louvers and arranged within its double flange to open or close the ventilating apertures of said louver, and means for drawing said louvers toward each other and against said walls.

---

1,559,378. WINDMILL. FREDERICK RITZ, Napoleon, Ohio, assignor to The Heller-Aller Company, Napoleon, Ohio, a Corporation of Ohio. Filed June 14, 1924. Serial No. 720,037. 2 Claims. (Cl. 170—46.)

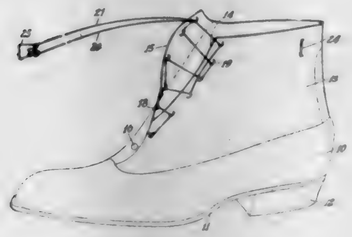


1. In a windmill engine, a support, a casing, a depending hollow neck carried by the casing, a shoulder extending outwardly from the lower end of the neck, and

having a depending flange, a ball-bearing plate on the support having the balls thereof enclosed by the flange and the bottom edge of the latter overlying the plate, angled fingers having lower ends seated on the plate and having vertical parts engaged with the flange and inwardly extending upper ends engaged on top of the shoulder, a tubular mast extending through the support and fitted within the neck and being surrounded by the balls of the ball bearing plate, a pump rod extending through the mast and neck, windwheel operated means within the casing for actuating the pump rod, and bolts extended through the lower ends of the fingers and through the plate to conjointly secure the fingers and the plate to the support.

---

1,559,379. SHOE. THOMAS RODRIGUEZ, Yonkers, N. Y. Filed May 27, 1925. Serial No. 33,125. 2 Claims. (Cl. 24—140.)



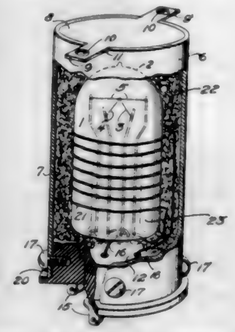
1. In a shoe having a shoe upper slitted at its forward end, a plurality of eyelets fixed to the external surface of the shoe upper adjacent the slitted edge, a plurality of eyelets fastened to the interior surface of the shoe upper adjacent opposite edges of the slit, a double length of string anchored at the lower portion of the slit, said strings passing thru one eyelet on one side of the slit and thence crossing to the eyelet of the opposite side of the slit, said arrangement being continued thruout the length of the slit, and fastening means on said strings adapted to be secured to a member fixed on the external surface at the rear of the shoe upper.

---

1,559,380. PROTECTIVE COVERING. WILLIAM C. ROE, New York, N. Y., assignor to Holmes Electric Protective Company, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1921. Serial No. 497,001. 1 Claim. (Cl. 173—264.)

A multi-ply waterproof fabric comprising superposed plies, a layer of asphalt securing said plies together, and thin, flat, asphalt coated, metallic ribbons embedded in the asphalt layer, the asphalt layer having a thickness not less than the thickness of the ribbons, whereby the outer surfaces of the plies are disposed entirely in one plane and the presence of the ribbons concealed.

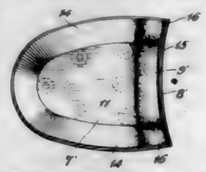
1,559,381. VACUUM-BULB DEVICE. ADOLPH RUDOLPH SWOBODA, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1921. Serial No. 502,003. 4 Claims. (Cl. 136—38.)



3. A vacuum tube having a conductor therein, said tube having two electrical terminals, and a resistance connected in series with said conductor between said terminals, said resistance being coiled about said tube.

---

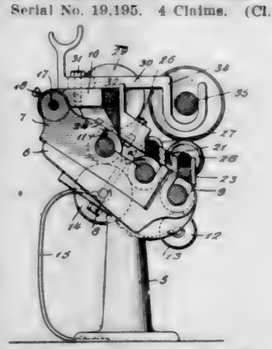
1,559,382. HEEL LIFT FOR SHOES. WILLIAM J. TOMPKINS, Mount Vernon, N. Y. Filed Apr. 9, 1920. Serial No. 372,435. 2 Claims. (Cl. 36—35.)



1. A resilient heel lift having a major body portion and a minor breast portion, said last named portion inclined upwardly from a line extending transversely and entirely across the major portion and adjacent to the breast edge of the heel, the upper face of the breast portion forming a rand which extends from breast corner to breast corner.

---

1,559,383. DRAWING FRAME FOR SPINNING MACHINES. HENRY TSCHUDY, Ennenda, Switzerland, assignor to Tschudy Spinning Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,195. 4 Claims. (Cl. 19—134.)

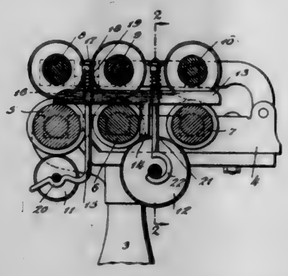


1. In a spinning machine, an inclined drawing frame, bearings supported thereby, top rolls having shafts supported in said bearings for only vertical movement

therein, pressure rolls for said top rolls, and bearings having vertical sides for receiving therebetween the ends of said pressure rolls.

---

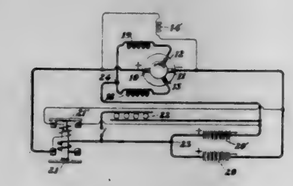
1,559,384. ROLLER SUPPORT FOR SPINNING MACHINES. HENRY TSCHUDY, Ennenda, Switzerland, assignor to Tschudy Spinning Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,196. 4 Claims. (Cl. 19—140.)



1. In a spinning machine, a plurality of drawing rolls, a supporting member resting thereon and including a stop depending therefrom and interposed between said rolls to limit longitudinal movement of said member in one direction, a hanger depending from said supporting member and having vertical movement relative thereto, and a clearer roll carried by said hanger in engagement with said rolls.

---

1,559,385. DOUBLE VOLTAGE SYSTEM. WILLIAM A. TURBAYNE, Niagara Falls, N. Y., assignor, by mesne assignments, to The Safety Car Heating and Lighting Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 17, 1921. Serial No. 437,677. 5 Claims. (Cl. 171—313.)

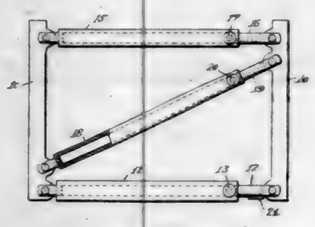


1. In a system, a double circuit generator, a battery connected in one circuit thereof, a translation circuit connected to be supplied by the other circuit thereof, said battery being connected to said translation circuit to supply said translation circuit when said generator is not developing a sufficiently high voltage, and an auxiliary battery permanently connected across said translation circuit during the entire time the translation circuit is closed.

---

1,559,386. GAUGE. THOMAS F. VALENTINE, Catawba, W. Va. Filed Feb. 28, 1925. Serial No. 12,320. 2 Claims. (Cl. 33—174.)

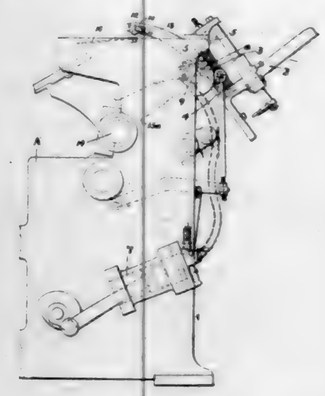
1. In a device of the class set forth, a longitudinally-extensible base-member having a straight-edge face adapted for abutment against the edge of the board, a pair of straight-edges pivotally connected to the opposite ends of said extensible base-member, an extensible connecting member pivotally connecting the outer ends of said straight-edges, and a diagonal longitudinally-extensible locking member connecting the two straight-edges



at points intermediate the other pivotal connections therewith, locking means being provided on each one of said extensible members.

---

1,559,387. FEED MECHANISM FOR PRINTING MACHINES. FRED WAITE, Otley, England. Filed June 18, 1923. Serial No. 646,103. 6 Claims. (Cl. 101—287.)

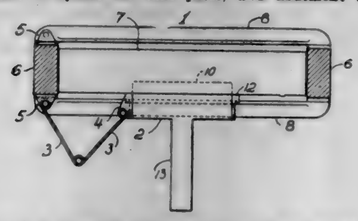


1. In a mechanism for the purpose described, the combination of a hopper adapted to support a series of sheets so that they will project above the upper edge of a stop at the lower end of the hopper, a rock shaft, a sucker supported by said shaft and adapted to be positioned to contact with the portion of the lowest sheet in the hopper that extends beyond said stop and bend said portion of the sheet along the edge of said stop as the shaft is rocked, a second rock shaft, arms extending laterally from said shaft toward the hopper and curved so that their free ends are directed rearward from the hopper, a gripper carried by said arms and adapted to engage the bent edges of the lowest sheet in the hopper and withdraw such sheet from the hopper as the shaft rocks, and means for automatically disengaging the sheet from the gripper as the latter approaches the limit of its movement away from the hopper.

---

1,559,388. FEEDER FOR CLOTHES WRINGERS. EDWARD WALKER, Grantwood, N. J. Filed June 23, 1924. Serial No. 721,829. 2 Claims. (Cl. 68—11.)

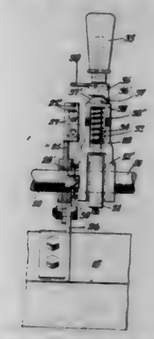
1. A feeding device capable of being used to feed clothes to a wringer, including a feed plate having one edge capable of insertion between the rollers of the wringer, a handle for said plate, and abutment strips



arranged at the ends of said plate with said edge of the plate projecting beyond the forward edges of said strips.

---

1,559,389. APPARATUS FOR CONTROLLING ELECTRIC CIRCUITS. ALFRED E. WALLER, Bronxville, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Apr. 7, 1922. Serial No. 550,293. 13 Claims. (Cl. 175—312.)



13. The combination of an electric circuit controlling device, a driving shaft therefor, a member pivoted on said shaft connected to said device, a plunger carried by said member biased to couple said member to said shaft, said member and said plunger having inter-related cam surfaces for causing said plunger to uncouple said member from said shaft when said plunger is turned on its axis, a tripping element adapted to be engaged by said plunger to turn said plunger until said cam surfaces have such relationship as to cause the plunger to uncouple said member from said shaft, and means whereby said tripping element may be adjusted to different positions.

---

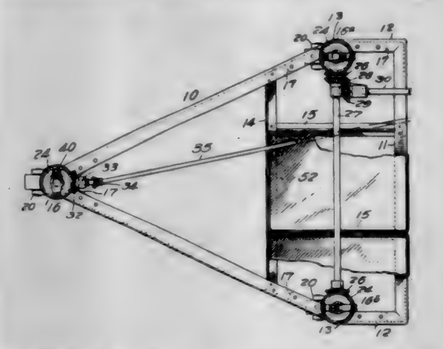
1,559,390. AQUAPLANE. FRED WALLER, New York, N. Y. Filed Aug. 22, 1925. Serial No. 51,766. 16 Claims. (Cl. 9—11.)

1. An aquaplane of the character described comprising in combination, a towing bridle, a pair of boards connected thereto and moveable vertically relative to each other.

---

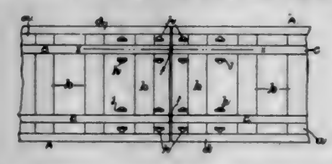
1,559,391. AUTOMOBILE LIFTING DEVICE. FREDERICK WATERS, Lyons Falls, N. Y. Filed July 1, 1924. Serial No. 723,579. 2 Claims. (Cl. 254—7.)

1. In an automobile lifting device, a main frame having the forward portion triangular in plan and the rear portion rectangular in plan, supporting rollers at the corners of the triangular portion of the frame, lifting jacks at the corners of the triangular portion of the frame, means connecting the lifting jacks at the base portion of the triangular part of the frame for simultaneous operation, means operative beyond the rectangular portion of the frame for independently operating the jack at the apex of the triangular portion, means for operating the connected jacks at the base of such triangular portion, and receptacle supporting means extending in both directions beyond the means connecting the jacks at the base of the triangular portion of the frame.



---

1,559,392. TOY RAILWAY LINE. ERNEST WHITELEY, Liverpool, England, assignor to Barringer, Wallis and Manners Limited, Mansfield, England. Filed Feb. 28, 1924. Serial No. 695,701. 2 Claims. (Cl. 238—10.)



2. A toy railway section as claimed in claim 1, adapted to be connected to an adjacent rail section and further characterized by the connecting pin being secured when partially inserted in a rail by the aid of a tongue formed out of the metal of the rail section adjacent to the entered portion of the pin, and which tongue is forced inward to clinch the pin in position.

---

1,559,393. PROCESS FOR TREATING RUBBER AND SIMILAR MATERIALS AND TO THE PRODUCTS OBTAINED THEREBY. THEODORE WHITTELSEY, Upper Montclair, and CHARLES E. BRADLEY, Montclair, N. J., assignors to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed Feb. 19, 1920. Serial No. 359,818. 11 Claims. (Cl. 18—53.)

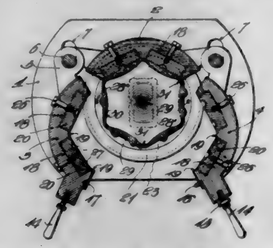
1. A process for vulcanizing rubber which consists in treating rubber with a substantially halide-free reaction product of a sulphur halide and an amine, said reaction product having the structural formula $RS_2$, where R represents a nonhalogen substitution, and vulcanizing the rubber.

---

1,559,394. MOLD FOR MAKING GLASS SIGN PLATES. JOSIAH H. WILLIAMS, Baltimore, Md. Filed May 4, 1923. Serial No. 636,669. 9 Claims. (Cl. 49—70.)

1. A mold for blowing glass bottles having character bearing sides separable from each other to form sign plates, said mold having a forming chamber provided with

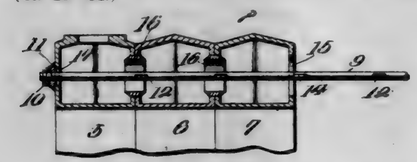
angularly related bottle side forming walls of a predetermined width and relatively narrower corner angle forming walls disposed between adjacent bottle side forming walls and arranged at oblique angles thereto,



each bottle side forming wall being provided with a character molding die surface and a flat die surface extending beyond said character molding die surface to and intersecting adjacent corner angle forming walls.

---

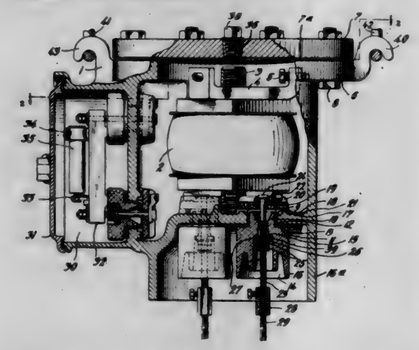
1,559,395. DEVICE FOR ERECTING SECTIONAL STEAM OR HOT-WATER CAST-IRON BOILERS OR THE LIKE. ROBERT T. WITHERS, New Castle, Pa. Filed July 1, 1924. Serial No. 723,608. 8 Claims. (Cl. 29—84.)



1. A device for assembling a sectional boiler or the like, comprising a tie rod adapted to be passed through said sections, said tie rod carrying means intermediate the length of the tie-rod for forcing the sections together.

---

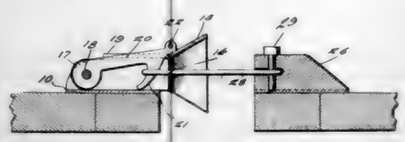
1,559,396. LOADING-COIL CASE AND THE LIKE. CHARLES R. YOUNG, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 28, 1918, Serial No. 268,765. Divided and this application filed July 9, 1923. Serial No. 650,321. 6 Claims. (Cl. 175—361.)



1. The combination with a casing for loading coils and the like, having insulating bushings having coaxial parts interior and exterior of said casing, and conducting means retained thereby extending through the wall of said casing, of sealing gaskets between the exterior part of said insulating bushing and said casing and between said conducting means and bushing, and a washer concentrically surrounding said gasket, and means for making said washer practically impervious to insects.

---

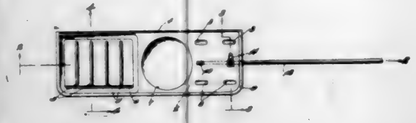
1,559,397. AUTOMATIC COUPLER. ZACHRY M. AUSHEAR, Lothair, Ky. Filed Jan. 25, 1924. Serial No 688,544. 2 Claims. (Cl. 213—179.)



1. A coupling device comprising, in combination, a supporting member carrying a draft link and adapted to be mounted upon an end of a car to be coupled to another, and a cooperating coupling member comprising a support having spaced upstanding flanges, an open bottomed housing pivoted between said flanges and having a flaring entrance, the top of the housing being slotted, and an elongated hook pivoted on said pivot and lying within said slot with its bill portion extending downwardly across the housing and inclined rearwardly, the bill being adapted to be engaged and lifted by said link.

---

1,559,398. BATHROOM FIXTURE. HANS H. ANDERSON, Chicago, Ill. Filed Aug. 16, 1924. Serial No. 732,541. 1 Claim. (Cl. 45—32.)



A fixture of the class described including a rod, a body plate having an opening therethrough, a beading on the edges of said plate, a yieldable tongue stamped out from the body plate between the opening and one edge thereof, said tongue being normally projected below the lower surface of the body plate, offset retaining bends on one end of the rod adapted to be inserted through the opening and engaged with the upper surface of the body plate, said rod being engaged between the beading and the yieldable tongue for supporting the same in a horizontal position.

---

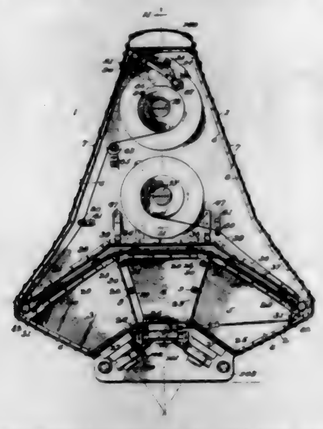
1,559,399. PROCESS OF DECOLORIZING AND REFINING GUMS AND RESINOUS PRODUCTS OF CONIFEROUS PINE TREES. ALFRED R. AUTREY, Port Arthur, Tex. Filed Aug. 13, 1924. Serial No. 731,870. 4 Claims. (Cl. 203—4.)

1. A process which comprises agitating gum turpentine material with dried fuller's earth and filtering, thereafter distilling with steam at a temperature not above 315° F.

---

1,559,400. AERO CAMERA. JAMES W. BAGLEY, Fayetteville, Tenn., and CARL H. AU, Washington, D. C. Filed Apr. 4, 1921. Serial No. 458,208. 7 Claims. (Cl. 95—18.)

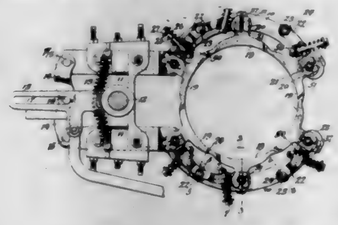
1. In an aero-camera, the combination of a casting having a magazine compartment for receiving a roll film sensitive surface, a lens compartment separable from said magazine compartment and provided with a plurality of lenses having their axes in a common plane and their focal planes inclined to each other, and film supporting frames between said compartments adapted to support



the photo-sensitive surface in the said focal planes, said frames being provided with photo-registering notches adapted to locate a predetermined point on the negative.

---

1,559,401. COMPRESSING MECHANISM FOR BARREL-MAKING MACHINES. EDWIN F. BEUGLER, Buffalo, N. Y., assignor to E. & B. Holmes Machinery Co., Buffalo, N. Y., a Corporation of New York. Filed June 17, 1924. Serial No. 720,568. 9 Claims. (Cl. 147—4.)



1. A machine of the character described, comprising compressor arms adapted to embrace a barrel, a plurality of supporting links each pivoted at one end on one of said arms, compressor jaws each pivoted on the opposite end of one of said links, stop means for arresting the inward movement of each of said links on its respective arm, and tension means for holding each of said links yieldingly in its innermost position.

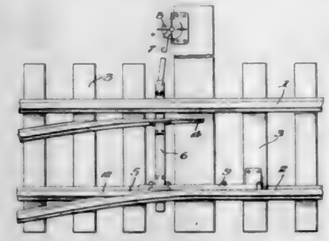
---

1,559,402. AUTOMOBILE STEERING CONNECTION AND METHOD OF MAKING THE SAME. RALPH H. BOARDMAN, New Britain, Conn., assignor to The Stanley Works, a Corporation of Connecticut. Filed June 15, 1922. Serial No. 568,391. 21 Claims. (Cl. 287—90.)

9. That improvement in the art of drag-links for use in automobile steering connections which consists of a rod formed from a rod of uniform diameter and having a portion slightly spaced from one end swaged up to form an abutment and an end stud, a drawn socket member of wrought metal having an end wall provided with an opening receiving said stud, and a drawn reinforcing cup of wrought metal fitting snugly within the inner end of said socket member and having an end wall provided with an opening receiving said stud, the outer end of said stud being swaged to form a head between which and said abutment, said end walls of said socket member and cup are securely clamped.

---

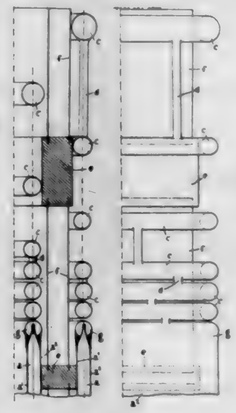
1,559,403. SAFETY-BAR ATTACHMENT FOR RAILWAY SWITCHES. E LEE BREWER, Dallas, Tex. Filed June 27, 1925. Serial No. 40,017. 3 Claims. (Cl. 246—437.)



1. The combination of a railway rail, and a switch point, an extension for said switch point in position to be seated under a portion of said rail, said extension having a flange thereon provided with a diagonal inner surface in position to be engaged by the rolling stock, in the event of the switch being only partly closed for directing said rolling stock over the switch point.

---

1,559,404. HIGH-TENSION ELECTRICAL CONDENSER. PAUL BUNET, Moissy-Cramayel, France. Filed Apr. 14, 1921. Serial No. 461,247. 12 Claims. (Cl. 250—41.)

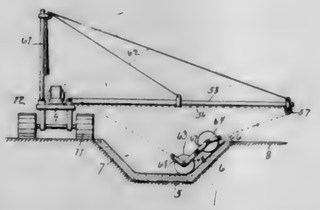


1. A high tension electrical condenser comprising electrodes separated by a dielectric, each of said electrodes comprising rods of substantially circular cross section permanently electrically connected together so as to prevent sparking between the parts, the distance between successive rods of each electrode, at the margin thereof gradually increasing towards the edge of the electrode.

1,559,405. PROCESS OF MAKING TETRA-ALKYL LEAD. WILLIAM S. CALCOTT, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 5, 1922. Serial No. 592,598. 20 Claims. (Cl. 260—11Pb.)

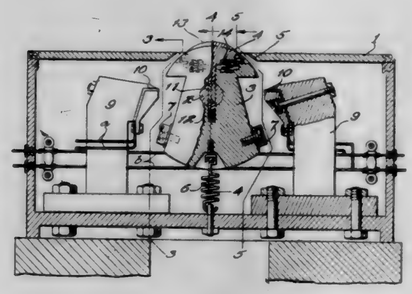
1. The process of producing a tetra-alkyl lead which comprises treating lead with an alkyl halide in the presence of a catalyst of the type used for the Grignard synthesis, and subjecting the mixture to the action of a sufficient quantity of a reducing agent to effect reduction to a lead dialkyl, and converting the latter by heat into tetra-alkyl lead, the quantity of said reducing agent being substantially less than the equivalent of four atoms of nascent hydrogen, for each molecule of the lead used.

1,559,406. SURFACE-ROLLING DEVICE. FRANCIS L. CARSON, Berkeley, Calif. Filed Aug. 4, 1924. Serial No. 730,115. 3 Claims. (Cl. 61—63.)



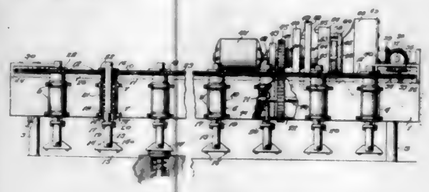
3. A surface rolling machine comprising a vehicle, a boom carried thereby, a compressing element connected to said boom and vehicle, means operative from the vehicle for actuating the compressing element, and a source of power embodied in the vehicle for actuating the said means.

1,559,407. SWITCH CONTROLLER. WALTER CARTER, Johnstown, Pa. Filed Nov. 3, 1924. Serial No. 747,649. 2 Claims. (Cl. 246—246.)



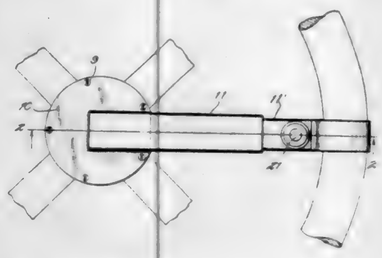
1. A device of the class described comprising a casing, a member tiltably mounted therein and having a part projecting from the casing, a spring for holding the member in its central position, bridging contacts on the member, pairs of contacts which are bridged by the bridging contacts when the member is in its tilted position, circuits to which the pairs of contacts are connected, means for locking the member against tilting movement and a depressible part carried by the projecting part of the member for moving the locking means to inactive position.

1,559,408. VALVE-GRINDING MACHINE. THOMAS W. CLARKE, Seattle, Wash. Filed July 14, 1923. Serial No. 651,567. 7 Claims. (Cl. 51—29.)



1. In a valve-grinding machine, the combination of a supporting frame, a plurality of valve-engaging and turning members mounted upon the frame for vertical sliding movement and for rotation in a horizontal plane, means for rotating said members, means for yieldably holding said members in their lower positions, a cam shaft mounted in the frame, means for rotating said cam shaft, a plurality of levers fulcrumed upon the frame intermediate their ends and each provided at its front end with a fork engaging and supporting one of said valve-engaging members, and pusher arms at the rear ends of the levers engaging the cam shaft.

1,559,409. CIRCUIT-CLOSER MOUNTING. JOSHUA W. DAVIS, Sumter, S. C. Filed Dec. 10, 1924. Serial No. 755,111. 2 Claims. (Cl. 200—59.)

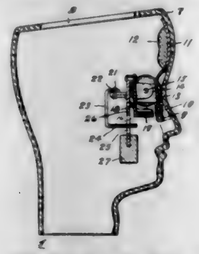


1. The combination with a steering wheel and its post, of a casing loosely supported on the post, a tube extending from the casing, an expansible hollow arm telescopically engaged with the tube, a circuit closer carried thereby and arranged in close proximity to the rim of the wheel, a serrated disk fixed to the steering wheel post and arranged within the casing and a spring urged detent in the tube and engaging the serrated disk whereby to lock the arm thereto.

1,559,410. EYE-OPERATING MECHANISM FOR DOLLS. ROMAIN DE BERSAQUES, Seattle, Wash. Filed May 10, 1922. Serial No. 559,950. Renewed Apr. 13, 1925. 1 Claim. (Cl. 46—40.)

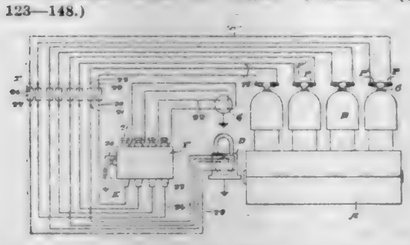
The combination with a doll's head, of a socket secured within the nose portion of said doll head, a supporting bar arranged to fit within said socket and to be cemented to the forehead portion of said doll head, a fixed bracket projecting rearwardly from said supporting bar, an arm connected with said fixed bracket and protruding downwardly, a transverse bar supported by said arm, an eyeball supporting bracket pivoted to each end of said transverse bar, an eyeball secured to each eyeball supporting bracket, an actuating bar connecting said two eyeball supporting brackets, a weight arm pivotally connected with said fixed bracket, a weight

on the lower end of said weight arm and means connecting said weight arm with said actuating bar for



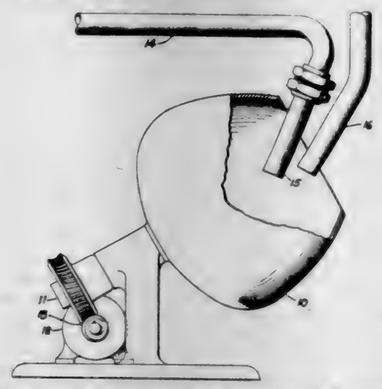
moving said actuating bar to turn said eyeball supporting brackets in response to sidewise tilting movement of said doll head.

1,559,411. DOUBLE SPARK-IGNITION SYSTEM. FERNANDO M. ESPINOSA, Suchitoto, Salvador. Filed Dec. 5, 1923. Serial No. 678,745. 2 Claims. (Cl. 123—148.)



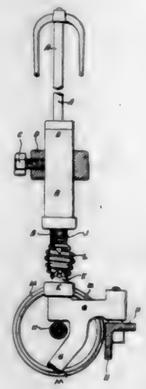
1. In an internal combustion engine, a duplex ignition system including the use of two sets of plugs, an ignition system for supplying current to one set of plugs, an ignition system for supplying current to the other set of plugs and a test device interposed in the circuit of both systems and including auxiliary gaps operating to give a visible indication whereby to facilitate synchronizing the sparks of both systems.

1,559,412. METHOD OF PRODUCING CHOCOLATE-COATED CONFECTIONS. JULIUS R. FRANZEN, San Francisco, Calif., assignor to Ernest Wilson, Palo Alto, Calif. Filed Nov. 13, 1924. Serial No. 749,582. 5 Claims. (Cl. 91—68.)



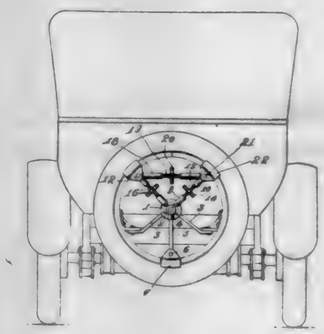
1. A method of producing chocolate-coated confections which consists of placing the objects to be coated in a revolving vessel, rotating the vessel to cause the objects to roll over each other, applying melted chocolate gradually over said objects, and subjecting the contents of the vessel to a temperature below 70° Fahrenheit, whereby to bring about hardening of the chocolate before a ball or mass forms in the vessel such as would interfere with free rolling of the individual pieces.

1,559,413. DRIVING MECHANISM FOR SPINNING AND LIKE SPINDLES. GORDON FRASER, NORMAN FRASER, and JOHN FRASER, Arbroath, Scotland. Filed Feb. 5, 1924. Serial No. 690,744. 2 Claims. (Cl. 74—26.)



1. In driving mechanism for spinning and like spindle, caps on the lower end of the spinning spindle and on the upper side of the driving wharve, and a spiral spring coupling extending between and secured to these caps.

1,559,414. TIRE CARRIER. BEN H. FREELAND, Peru, Ind. Filed Feb. 28, 1925. Serial No. 12,389. 2 Claims. (Cl. 224—29.)



1. A combined spare tire carrier and rim expander for automobiles including a support having a socket, an arm having one end in the socket, a two-part rim engaging clamp adjustably secured on the arm, upwardly inclined radially disposed arms pivotally secured on the support comprising inner and outer socket members having threaded bores of different hand pitches, a screw having its end provided with different hand pitches re-

ceived in the sockets, an apertured head centrally on the screw, two-part rim engaging clamps on the outer sockets, and binding means between said clamps and said sockets.

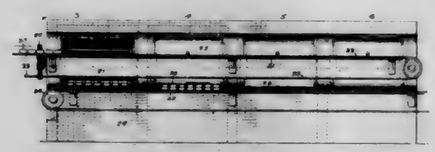
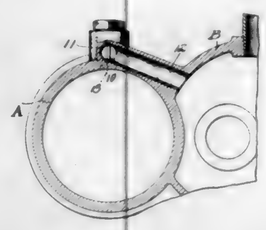
1,559,416. BAKER'S OVEN. JOHN M. GANTVOORT, Beacon, N. Y. Filed Feb. 9, 1921. Serial No. 443,591. 3 Claims. (Cl. 107—57.)



1. In a baker's installation, a battery of juxtaposed ovens having substantially aligned bays projecting from one end of the ovens, traveling supports within the ovens, baking shelves carried thereby and entering said bays during portion of their travel, and entry and discharge openings in said bays.

2. In a baker's installation, a battery of juxtaposed ovens having substantially aligned bays projecting from one end of the ovens, traveling supports within the ovens, baking shelves carried thereby and entering said bays during portion of their travel, and entry and discharge openings in said bays in combination with traveling conveyors, common to said battery of ovens and arranged respectively adjacent the entry and discharge openings in the bays, for the purpose specified.

1,559,417. STEAM-CYLINDER RELIEF FOR ENGINES. PERRY HOMER GENTZEL, Newton, Mass. Filed Oct. 24, 1919. Serial No. 332,934. 2 Claims. (Cl. 131—134.)



1. In a steam engine, the combination of a horizontal cylinder, a steam chest formed integrally with said cylinder said cylinder having an opening through its wall closely adjacent each end with a longitudinally disposed passage in said cylinder, wall forming communication between said openings and also having a transversely disposed downwardly directed passage contained entirely in said wall and forming communication between the intermediate portion of said longitudinally disposed passage and said steam chest, a valve seat formed in each of said openings, a gravity operated valve disposed in each of said openings above said seat, and a removable closure plug in the outer end of each of said openings, substantially as set forth.

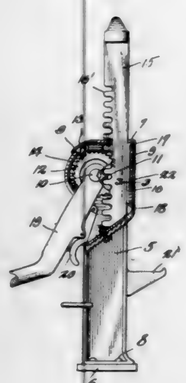
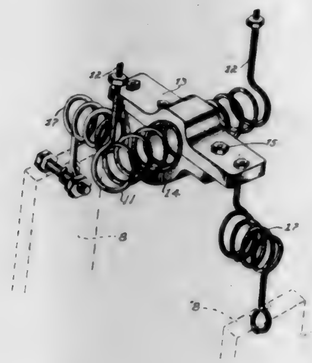
1,559,418. JACK. JOHN E. GILCHRIST, deceased, late of South Bend, Wash., by Charles A. Werley, South Bend, Wash., executor. Filed July 1, 1925. Serial No. 40,897. 4 Claims. (Cl. 254—95.)



1. A lifting jack comprising a body portion a housing forming a part of the body portion, a lifting bar movable through the body portion and having teeth formed along one of its edges, a pinion meshing with the teeth of the lifting bar, means for operating the pinion to move the lifting bar vertically, a bearing plate supported within the housing and contacting with the lifting bar, and removable means positioned between the bearing plate and body portion for moving the bearing plate into engagement with the lifting bar.

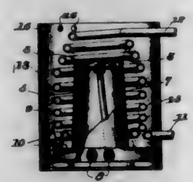
1,559,419. EXERCISING APPARATUS. MORRIS GOLOMB, New York, N. Y. Filed Mar. 27, 1925. Serial No. 18,913. 8 Claims. (Cl. 272—76.)



1. A boxing dummy, comprising an inflatable body portion, a rigid base structure, independent coil springs carried by the base structure, a clamp supported by and between said coil springs, and a coil spring carried by the clamp with its terminals secured to the body portion.

---

1,559,420. GAS WATER HEATER. ISAAC GORDON, New York, N. Y. Filed Jan. 9, 1924. Serial No. 685,272. 7 Claims. (Cl. 126—53.)

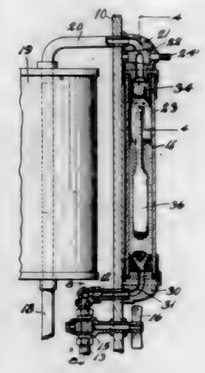


1. A heating system including a burner having an upper and a lower series of jet holes, a water coil surrounding the burner and arranged directly over the lower series of holes, the upper portion of the coil having an opening therein so that flames from the upper series of jet holes may be applied vertically and directly to a cooking utensil adapted to be arranged thereover.

---

1,559,421. BATTERY-TESTING APPLIANCE. WILLIAM H. GREET, Starkville, Colo. Filed Nov. 29, 1924. Serial No. 752,987. 9 Claims. (Cl. 265—45.)

1. In a battery testing appliance, an indicating instrument, a plurality of ways leading therefrom provided with independent cut off means, a plurality of conduits extending from said ways to the separate cells of the battery, means for applying an air suction to said indicating instrument comprising an air tension line extending therefrom to the engine manifold, and a controlling valve in said air line intermediate the instrument and source of air suction adapted to establish communication with the instrument or with atmospheric pressure.



---

1,559,422. TOY. FRANK J. HANLEY, New York, N. Y. Filed July 25, 1924. Serial No. 728,217. 1 Claim. (Cl. 272—85.)

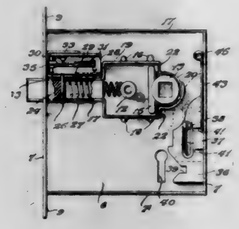
A toy device, which comprises a handle, a wheel rotatably mounted on one end thereof, said wheel being grooved, a stub shaft mounted on the handle with its axis at right angles to the axis of the wheel, a sleeve on the stub shaft, a pin wheel element rotatably mounted with the sleeve on the stub shaft, a belt connecting the pin wheel element to the wheel, said belt travelling in said groove, and an eye on the handle adjacent the wheel through which the belt travels whereby it can be guided to hold it in the groove.

---

1,559,423. LOCK. WILLIAM H. HARTZLER, Pleasant Hill, Mo. Filed Oct. 3, 1923. Serial No. 666,357. 1 Claim. (Cl. 292—333.)

In a lock, the combination with a lock case, of a bolt slidably mounted therein, means whereby the bolt may be projected or retracted, a stop member on the bolt, a bracket secured within the lock case immediately adjacent the bolt, a detent slidably supported by said bracket for movement transversely of the bolt, an arm on the

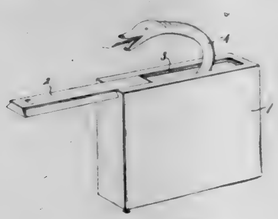
detent disposed longitudinally of the bolt between the bolt and the bracket to be guided thereby and adapted to lie at the side of the stop element on the bolt between the same and the side of the lock case or engage



in front of the stop element, a tongue projecting laterally from the detent through the side of the lock case, and a spring housed within the bracket and acting upon the detent tending constantly to project the arm thereon into the path of the stop member on the bolt.

---

1,559,424. TOY. JOSEPH A. HAY, Gary, Ind. Filed Mar. 7, 1923. Serial No. 623,471. 1 Claims. (Cl. 46—40.)



A toy of the class described, comprising a box, a sliding cover for the box, said box having an opening in one end directly under the cover, a U-shaped figure made to represent a snake having one end pivoted in the box so that its other end can project from the box, a pin extending transversely through the box adjacent the pivotal point of the figure and a string connected with the bottom of the cover and with the figure near its pivotal end and adapted to be guided by the pin.

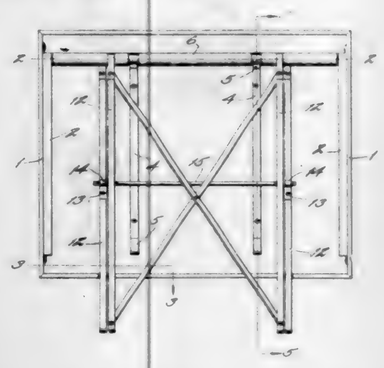
---

1,559,425. BARBER'S CHAIR. ESTHER T. HEHN, Sioux City, Iowa. Filed June 20, 1924. Serial No. 721,298. 2 Claims. (Cl. 155—132.)

1. In a barber's chair, a back including a lower stationary upholstered section, and an upper movable upholstered section normally arranged vertically and flush with the lower section, means for supporting the upper section for pivotal movement whereby said section is capable of being swung to a horizontal position for use as an auxiliary seat, said section being also mounted for vertical adjustment to vary its height when used as a seat, said seat having a recess adjacent one end thereof, a pivoted locking element designed to be received by said recess and engaging said seat to hold it in a vertical position, and a rod mounted for sliding movement and connected with the locking element to effectively release said seat, and simultaneously move the seat from its vertical to a horizontal position.

---

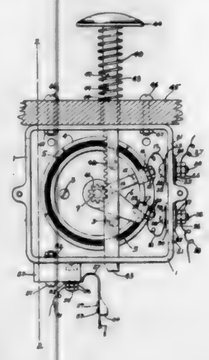
1,559,426. TABLE. FRANK J. HEKRDLE, Davidson, Saskatchewan, Canada. Filed Apr. 1, 1925. Serial No. 19,958. 1 Claim. (Cl. 45—11.)



A table top having depending flanges provided with channeled guides, a pair of bars having their ends contacting the guides, trunnions on the ends of one of the bars received in the guides, wheels journaled on said trunnions, legs arranged in crossed pairs hingedly associated with the respective bars, means pivotally connecting the respective pairs of crossed legs, rails on which the crossed bars travel when the legs are in set-up or are in folded position, and said rails having upset ends limiting the movement of the bars on the rails in both directions.

---

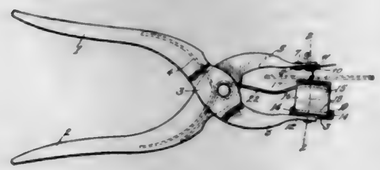
1,559,427. COMBINATION HEADLIGHT-DIMMING AND SPOTLIGHT-CONTROLLING MEANS. GROVER H. HEMPHILL, Dayton, Ohio. Filed Sept. 15, 1923. Serial No. 663,010. 4 Claims. (Cl. 201—48.)



1. A dimmer rheostat comprising a resistance winding, a contact movable along said resistance winding, means for shifting said contact to different positions on said winding, and an electrical adjustable contact adapted to be engaged by the shifting means for the first contact when the latter is at a desired point on the resistance winding.

---

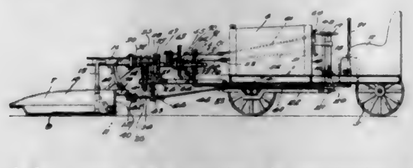
1,559,428. PIN-TAG-FASTENING TOOL. WILLIAM C. HENNIKSEN, Hubbleton, Wis. Filed May 6, 1925. Serial No. 28,432. 3 Claims. (Cl. 1—50.)



3. In a pin tag fastening tool, a pair of handle members having opposing jaws, one of which being provided with an extension, a plate with guides mounted on the extension, a pin prong separating element comprising spreading plates mounted in said guides, the separating element being spring tensioned, the other jaw being provided with means for holding a pin tag, whereby upon the jaws coming together, the prongs of the pin carried by the tag penetrate the material to which it may be fastened so that when the plates spread the prongs are spread and clinched, the guides of the first plate having abutments to limit the plates of the element during their movements toward each other.

---

1,559,429. SUGAR-CANE-CUTTING MACHINE. UMEJIRO HIRAI, Honolulu, Hawaii. Filed Oct. 28, 1922. Serial No. 597,582. 5 Claims. (Cl. 56—25.)

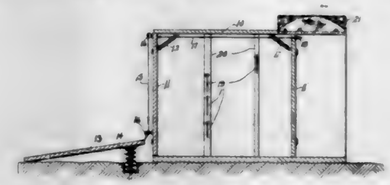


1. In a cane cutting machine, the combination of a wheeled frame, means for steering the frame, a longitudinal vertically swinging lever fulcrumed on the frame and extending forwardly therefrom, manually operable means on the frame to depress the rear arm of the said lever, a head carried by the forward arm of said lever, a spring supported pin movable vertically relative to said head, a clevis journalled in said pin and movable in said head, a bar pivotally connected at an intermediate point of its length to said clevis, cutting blades connected with and disposed in a horizontal plane below said pivotal bar, a pendent curvilinear rack connected at its ends to and arranged below said bar, an arcuate rack connected at its ends to and disposed in rear of the pivoted bar, connections extending rearwardly from said pivoted bar, a rack bar carried by said connections, a rack bar connected with the blades, gears intermeshed with said rack bars, and manually-operable devices on the frame and connected with said gears for the actuation of the latter.

---

1,559,430. LIVESTOCK FLYTRAP. JAMES B. HOCKERSMITH, Taylorville, Ill. Filed Feb. 2, 1924. Serial No. 690,251. 2 Claims. (Cl. 119—156.)

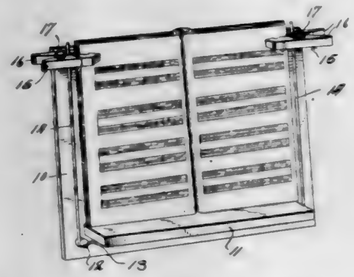
1. A device of the character described comprising a cabinet open at both ends and through which an animal is adapted to pass, a normally elevated platform adapted to be depressed by the weight of the animal, swinging doors normally closing the ends of the cabinet, means for automatically swinging the doors to an open position when the platform is depressed, means arranged



within the cabinet for removing insects from the body of the animal, and a trap supported by the cabinet and adapted to receive said insects.

---

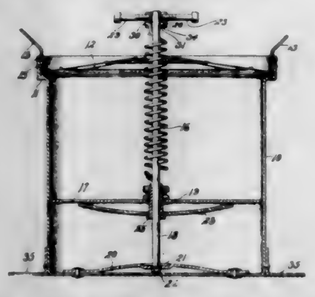
1,559,431. BOOK-SUPPORTING DEVICE. THOMAS W. HOGSETT, Marlinton, W. Va. Filed Feb. 26, 1925. Serial No. 11,834. 2 Claims. (Cl. 45—61.)



2. A music and book holder of the character described comprising a back plate having a ledge along its lower edge upon which the lower edge of the book may rest, studs formed at the lower corners of the plate, a resilient wire extending longitudinally below the ledge wrapped around said studs and then extending upward and outward, and spring clamps longitudinally movable upon the wires and embodying two opposed spring-actuated jaws, the ledge being cut away to accommodate the upward bow of the resilient wire.

---

1,559,432. FEED RECEPTACLE FOR POULTRY. OLAF HOSTAD, Sullivan, Mich. Filed Dec. 14, 1923. Serial No. 680,702. 2 Claims. (Cl. 119—60.)

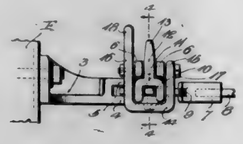


1. In a device of the class described, a receptacle, a spindle mounted centrally and vertically thereof, a screen mounted in the receptacle, a disk therein slidable on the spindle, a spring connected with the disk, a slotted

sleeve on the spindle, and a pin fixed in the upper end of the spindle for locking the sleeve against sliding movement under the action of the spring, but permitting sliding movement when the sleeve is rotated to permit the slotted portion thereof to pass the pin, the sleeve having an inner annular recess and having an aperture extending outwardly from the recessed portion, for receiving the end of the spring.

---

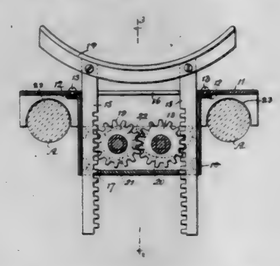
1,559,433. GRATE SHAKER. JOHN W. HULSON, Keokuk, Iowa, assignor to Hulson Grate Company. Filed Dec. 18, 1924. Serial No. 756,759. 4 Claims. (Cl. 126—169.)



1. A grate shaker comprising a supporting bracket, a grate shaking arm fulcrumed thereto on a horizontal axis and having an upstanding lug, a forked locking member pivoted on the bracket on a horizontal axis transverse to the fulcrum of the shaking arm and adapted to be swung to a substantially vertical released position or to a horizontal operative position in which it straddles said lug, and a movement limiting yoke pivoted to the bracket co-axially with said locking member, said yoke embracing said locking member and being movable to a horizontal operative position in which its side arms are disposed in the path of said lug to limit the movement of the shaking arm, said yoke being also movable to a substantially vertical released position.

---

1,559,434. BEAM REST. WILLIAM IMBT, East Stroudsburg, Pa. Filed July 1, 1924. Serial No. 723,562. 4 Claims. (Cl. 28—32.)

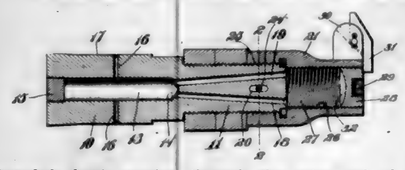


1. In a beam rest for use in removing beams from warping machines, a frame having members adapted to rest on the frame bars of a warping machine, a yoke adapted to be disposed beneath the warp beam and mounted in said frame to be raised or lowered, and means to raise said yoke for throwing the weight of the beam on the yoke.

---

1,559,435. CROSSHEAD PIN AND LUBRICATOR THEREFOR. FRED W. JACKSON, Needles, Calif. Filed May 12, 1925. Serial No. 29,771. 2 Claims. (Cl. 308—120.)

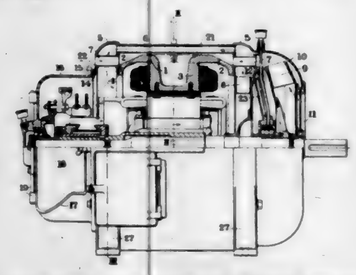
1. In combination with a pin having a body and a reduced threaded shank, an axial bore formed in the body from the end thereof remote from said shank and of less length than the body, the outer end of said bore being plugged, the body having ports communicating with said bore and with the bearing surface of the pin, said shank having a reduced bore communicating with the bore of the body, a retaining element for the pin mounted upon the pin and extending beyond the end thereof and having a bore communicating with the outer end of the pin, a plug threaded in the outer end of the bore and means for retaining the plug within the bore, the bore of said



threaded shank opening through the outer end of the threaded shank adjacent the perimeter thereof and angling inwardly longitudinally of the shank for communication with the inner end of the bore of the body, the threaded shank having a diametrically extending slot elongated upon the axis of the shank and adapted for the passage of a cotter key for the retaining element.

---

1,559,436. DYNAMO-ELECTRIC MACHINE. HENRY CHARLES EDWARD JACOBY, London, England. Filed Mar. 12, 1925. Serial No. 15,069. 4 Claims. (Cl. 171—252.)



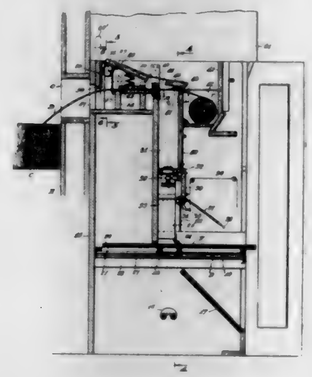
1. An enclosed dynamo electric machine comprising a magnet ring having reduced ends, a system of hot-air cooling tubes arranged around and in close proximity to the larger diameter of said magnet ring, annular attachments fitted on the reduced ends of said magnet ring for supporting said system of hot-air cooling tubes, a system of cold-air ducts also supported by said annular attachments and arranged around and in close proximity to the reduced ends of said magnet ring, means for circulating the hot internal air of the machine through said hot-air cooling tubes, and means for creating a current of cold air through said cold air ducts into contact with the exterior of said hot-air tubes and of said magnet ring, substantially as and for the purpose hereinbefore set forth.

---

1,559,437. DOUBLE-IMAGE RADIO PICTURE. CHARLES FRANCIS JENKINS, Washington, D. C. Filed May 5, 1925. Serial No. 28,223. 9 Claims. (Cl. 179—6.)

1. The combination of means for forming an image of an object, means for giving linear movement to said image, means for forming an image of said first image, means for giving linear movement to said second image a plurality of times and at approximately right angles to the movement of said first image, and a light sensitive cell located to be swept by said second image.

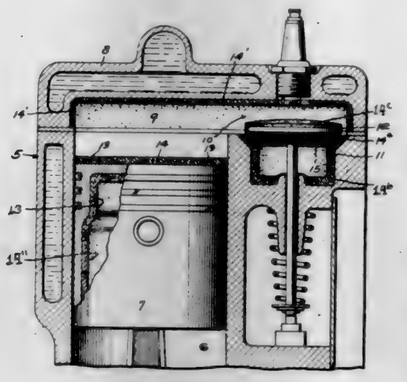
1,559,438. MACHINE FOR PRINTING PHOTOGRAPHS. ANATOL M. JOSEPHO, New York, N. Y. Filed May 1, 1924. Serial No. 710,410. 10 Claims. (Cl. 88—24.)



1. In a photographic printing machine, a cabinet, a source of light in said cabinet at the lower portion, a plate holder slidably supported in the cabinet above the source of light and having means to hold a series of plates, a series of vertically disposed lenses above said frame, a second frame beneath the first frame and provided with various colored glasses, said second frame slidable to present a glass of a particular color to a position beneath a plate on the holder to be exposed, shutter means between the lenses and the first frame, means to hold photographic paper above the lenses, means to cause the paper to travel across the plane of the lenses, and means operable for severing the exposed zone of the paper.

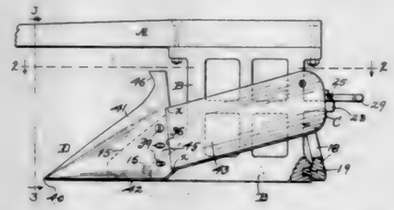
---

1,559,439. INTERNAL-COMBUSTION ENGINE. EDWARD W. KAFRAUN, Henry, Ill. Filed Jan. 16, 1925. Serial No. 2,889. 5 Claims. (Cl. 123—191.)



1. A composition for lining the interior parts of an internal combustion engine which are subjected to the presence of carbon deposits, comprising fused glass and aluminum.

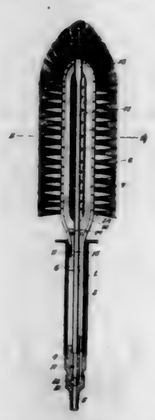
1,559,440. PLOW. MARTIN KELP, Paris, Ohio. Filed Jan. 18, 1924. Serial No. 686,994. 7 Claims. (Cl. 97—31.)



1. A plow comprising a standard, a mold-board arranged in the main at one side of and supported from the standards and having a forward member which extends forwardly of the lower end portion of the standard and has a forwardly facing end face and an upwardly and laterally outwardly facing outer side, and a plow-share seated on said side and extending forwardly of said forward member of the mold-board and having a rear transverse edge at the rear extremity of said side of said member of the mold-board, the mold-board having a forwardly facing shoulder at and opposite said edge of the plow-share and also having an outer side which extends rearwardly from said shoulder and faces upwardly and laterally outwardly, and the plow-share having a rearwardly facing shoulder abutting against the aforesaid face and being secured, between said shoulders, to the aforesaid forward member of the mold-board.

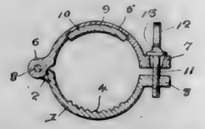
---

1,559,441. WASHING BRUSH. WILLIAM KUNDEL, Hoboken, N. J. Filed Sept. 20, 1924. Serial No. 738,850. 3 Claims. (Cl. 15—128.)



1. A washing brush, comprising a brush body provided with bristles and a handle extending from the end of the brush body longitudinally thereof, said handle being hollow, a centrally positioned pipe extending through said handle and entirely through the brush body but not through the bristles, a second pipe extending around the brush body near the base of the bristles and substantially through said handle, said first mentioned pipe being open at the end opposite the handle and the second mentioned pipe being provided with perforations at the part surrounding the brush body, and a single valve for controlling the flow of washing liquid to said pipes, said valve being connected with the end of said handle opposite that connected with said brush body.

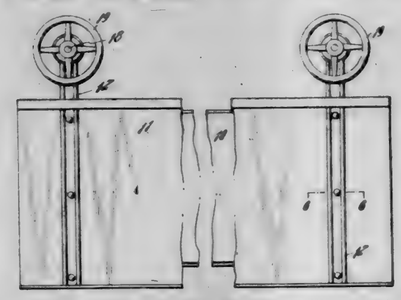
1,559,442. EMERGENCY REPAIR PATCH FOR HOSE AND PIPES. ROBERT H. LACY, Richmond, Va. Filed Jan. 4, 1924. Serial No. 684,377. 1 Claim. (Cl. 137—99.)



A repair device for hose and the like, comprising two members of curvilinear cross-section, and means for holding the inner concave sides of the said members under pressure against opposite portions of a hose or the like; one of the members having at its inner side a packing pad projecting inwardly from its surface, and the other member having at its inner side a plurality of ribs extending in the direction of its length.

---

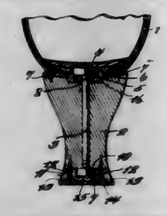
1,559,443. MOLD. WILLIAM THOMAS LANNING, Dunsmuir, Calif. Filed Mar. 12, 1925. Serial No. 15,035. 2 Claims. (Cl. 25—131.)



1. A mold of the character described comprising a plurality of stationary and movable mold sections alternately disposed in parallel realtion, spaced inner and outer pipes supporting the mold sections, means connecting the stationary mold sections with the outer pipe, means connecting the movable section with the inner pipe, and means for adjusting said inner pipe longitudinally of the outer pipe whereby the movable sections can be adjusted toward and away from the stationary sections.

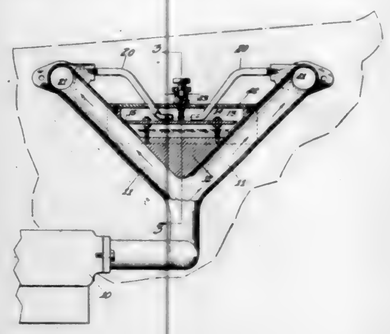
---

1,559,444. HEEL REENFORCEMENT AND SUPPORT. LARS R. LARSON, North Braddock, Pa. Filed Dec. 3, 1923. Serial No. 678,239. 1 Claim. (Cl. 36—34.)



In combination with a shoe embodying a high heel, a plate carried within the shoe at the heel portion thereof and conforming in shape thereto, said plate having means for engaging the shoe and heel to preclude relative turning movement of the three, and a bolt passing through the plate and heel, the plate having a depressed portion engaging a depression in the upper face of the heel and the bolt having a head seated in a recess formed by said depressed portion of the plate.

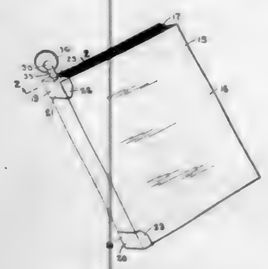
1,559,445. INTERNAL-COMBUSTION ENGINE. HENRY W. LAVIGNE, Worcester, Mass., assignor of one-half to Assaf G. Abysalh, Worcester, Mass. Filed Feb. 6, 1925. Serial No. 7,405. 2 Claims. (Cl. 123—25.)



1. The combination with an internal combustion engine having a pair of passages, of a water receptacle formed between the passages and supported by their walls, the front wall of said receptacle comprising a glass plate through which the level of the water can be observed, tubes extending from the top of said receptacle into the intakes of the engine for conducting into the engine with the combustible mixture, moisture formed in the top of the receptacle, and adjustable means for admitting air into the receptacle.

---

1,559,446. COMBINED CLAMP AND HANGER FOR BOOKS. AUGUST G. MASS, Cincinnati, Ohio. Filed Jan. 22, 1925. Serial No. 4,086. 6 Claims. (Cl. 129—38.)



1. In a device of the character described, the combination of a pair of end clamps arranged to be received about the opposite corners of a book at its back, tension clamping means connecting said end clamps for clamping said end clamps upon said book and said end clamps comprising side walls having movement endwise of said book, with said book serving as a spacer between said end-clamps for holding the same in separated relation, and swivel means at one end of said clamping means for supporting said device.

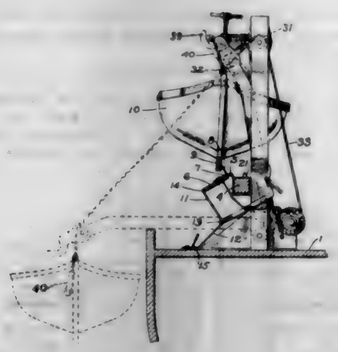
---

1,559,447. LIQUID ELECTRODE. OTTO MEYER-KELLER, Luzern, Switzerland. Filed Aug. 12, 1921. Serial No. 491,778. 3 Claims. (Cl. 219—40.)

2. A liquid electrode comprising in combination an electrode and an insulating casing encircling the same, said casing comprising a plurality of sections having passage ways therebetween, said sections being substantially triangular in cross section, one of said sections being adjustable whereby the area of several of said passage ways may be varied, and said passage ways extending parallel to said electrode.

---

1,559,448. BOAT DAVIT. WARREN F. MILLS, San Francisco, Calif. Filed Jan. 13, 1925. Serial No. 2,093. 9 Claims. (Cl. 9—22.)

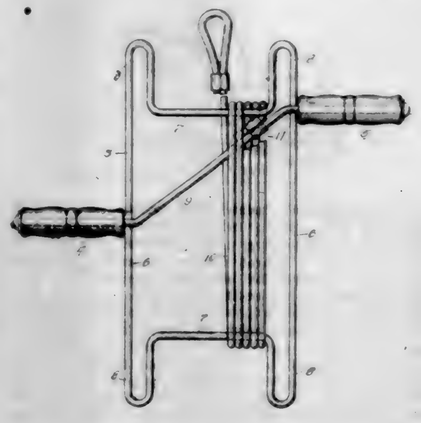


1. In a device of the character described, the combination of a support, a pair of vertically swinging davits thereon, tackle sets carried by the davits and adapted to be secured to and support a boat, and means on the free ends of the davits for supporting a boat in position further removed from the said support than when supported by the tackle sets and so arranged as to be automatically released in a manner supporting the boat entirely on the tackle sets when the boat is swung clear.

---

1,559,449. REEL. ERIK J. MORDT, Evanston, Ill. Filed Aug. 18, 1924. Serial No. 732,770. 3 Claims. (Cl. 242—96.)

1. A reel comprising a rectangular frame with sides 6—6 and ends 7—7 connected by integrally formed flanges 8, a wire 9 secured to the frame and having one end projecting from the frame in the center thereof



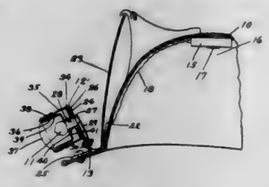
and the other end projecting from the other side of the frame at a distance from the center and rotatable handles secured to said projecting ends.

---

1,559,450. SHOE SOLE. LAURENCE M. OAKLEY, Trenton, N. J., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 6, 1922. Serial No. 541,369. 2 Claims. (Cl. 36—32.)

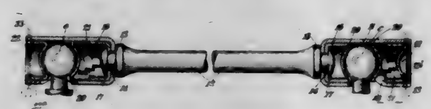
2. A shoe sole of molded resilient composition having a series of vacuum cups distributed over the area of the sole, each cup comprising an annular ring projecting beyond the normal plane of the sole and a depression within said ring which extends into the body of the sole, together with a central projection within the annular ring extending beyond the plane of the ring, said projection being resilient whereby it will yield to the plane of the annular ring under a predetermined pressure and the vacuum cup will be brought into operation.

1,559,451. FIREMAN'S HELMET-LAMP COMBINATION. EDWARD H. PARKER, New Britain, Conn. Filed Apr. 18, 1924. Serial No. 707,356. 2 Claims. (Cl. 40—60.)



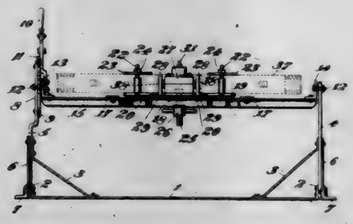
1. In a fireman's helmet-lamp combination, a helmet having a body and a brim projected forwardly from said body, a supporting plate projected upwardly from and positioned in spaced relation to said body, a lamp housing and supporting structure comprising a barrel-like side wall and a disc-like base at the rear end thereof and having a threaded sleeve for a lamp-base adjacent said base, said base being in face-to-face contact with the front face of said plate, a contact being positioned adjacent said plate at the rear side thereof, and said plate and base having clearance openings in line with said sleeve and contact for the free passage of a lamp-base engaged with said sleeve and cooperating with said contact.

1,559,452. AUTOMOBILE STEERING CONNECTION AND METHOD OF MAKING THE SAME. FRANK P. PRINDLE, New Britain, Conn., assignor to The Stanley Works, a Corporation of Connecticut. Filed June 15, 1922. Serial No. 568,412. 14 Claims. (Cl. 287—90.)



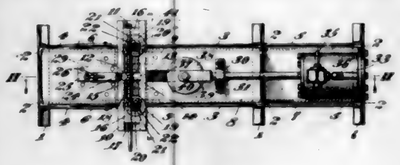
5. In a drag-link for automobile steering connections, a bearing-containing member, and a bearing contained therein consisting of a piece of sheet metal having a dished portion to form the bearing, and a skirt extending around the edge of said dished portion.

1,559,453. WELDING TABLE. LINDSAY C. PRITNER and LEWIS S. PAUL, Johnstown, Pa. Filed Nov. 4, 1922. Serial No. 599,098. 7 Claims. (Cl. 29—89.)



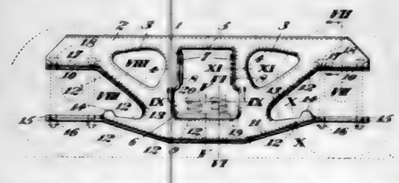
1. A welding table provided with a pair of fixed supports, a table having its ends journalled in said supports, means for rotating said table on said journals and for holding it in any inclined position desired, means on said table for securing a side frame of a railway truck thereto, and means for clamping and holding column guides in position against said frame.

1,559,454. BENDING MACHINE. LINDSAY C. PRITNER and LEWIS S. PAUL, Johnstown, Pa. Filed Nov. 4, 1922. Serial No. 599,099. 6 Claims. (Cl. 153—48.)



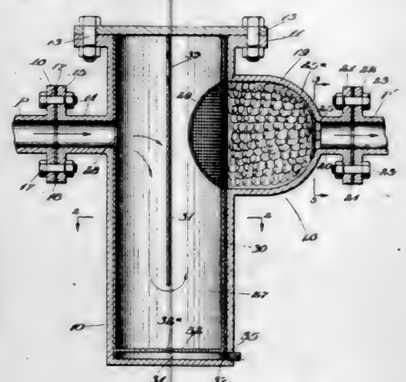
1. A bending machine comprising a platform, a grooved guide mounted thereon, a pair of slides mounted in the groove of said guide, a roller rotatably mounted on each slide, means for moving said slides toward and from each other, a reciprocable roller adapted to be moved toward or from the pair of adjustable rollers, and an adjustable stop in the rear of and between said adjustable rollers.

1,559,455. TRUCK FRAME. LINDSAY C. PRITNER, Johnstown, Pa. Filed Nov. 6, 1922. Serial No. 599,219. 20 Claims. (Cl. 105—205.)



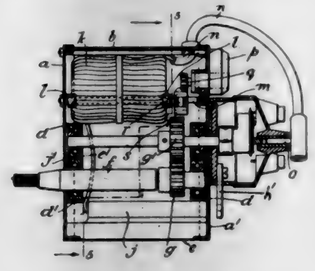
1. A truck frame composed of one metal plate provided with inwardly extending overlapping integral flanges secured together.

1,559,456. GAS FILTER. REGINALD M. RANYARD, Palms, Calif., assignor to R. G. T. MFG. CO., Los Angeles, Calif., a Corporation of California. Filed Sept. 4, 1924. Serial No. 735,887. 15 Claims. (Cl. 185—40.)



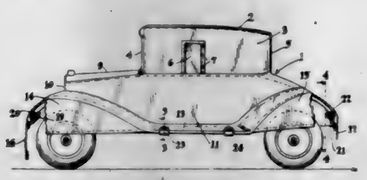
1. A gas filter comprising a shell attachable to a pipe line, inlet and outlet openings formed in said shell, a removable container disposed within said shell, openings formed in said container adapted to register with the inlet and outlet openings in said shell, and a baffle plate mounted in said container.

1,559,457. COIL-IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. DAVID ALBERT VICTOR RIST, New Southgate, London, England. Filed May 31, 1921. Serial No. 474,001. 2 Claims. (Cl. 123—148.)



1. A coil and distributor unit for mounting in place of the magneto of an internal combustion engine and comprising a housing, a distributor and circuit breaker secured against one end of said housing, a driven shaft rotatably mounted in said housing and extended through one end of said housing for connection with the magneto operating shaft of an engine, a distributor operating shaft rotatably mounted in said housing and rotated from said drive shaft and extending through the other end of said housing for operating said distributor and circuit breaker when rotated, a fixed sparking coil mounted in said housing and having operative connection with said distributor, said coil being supplied with current from a storage battery, and a condenser mounted in said housing and having operative connection with said coil.

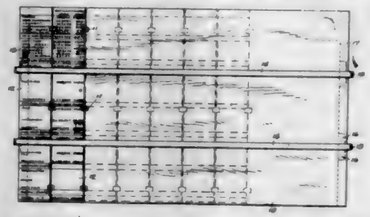
1,559,458. AUTOMOBILE COVER. MICHAEL B. RIZIANU, Los Angeles, Calif. Filed Sept. 15, 1924. Serial No. 737,853. 6 Claims. (Cl. 296—136.)



1. A completely removable cover of flexible material for an automobile, shaped to fit over the top and snugly around the body and hood of an automobile, with side sections along the side of the body and hood, fender sections secured to the side sections of the cover at substantially right angles thereto and shaped to cover the fenders and running board, and means to secure the fender sections in place and thereby secure the whole cover.

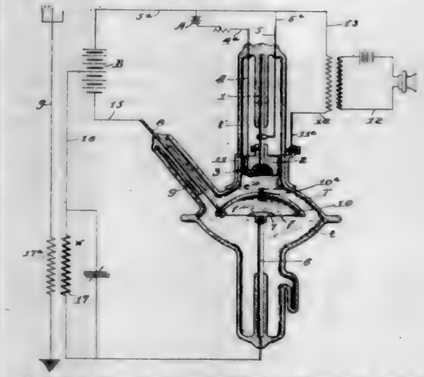
1,559,459. CHART HOLDER AND FINDER. JASON ROGERS, New Rochelle, N. Y., assignor to The Advertisers' Weekly, Inc., New Rochelle, N. Y., a Corporation of New York. Filed Feb. 2, 1923. Serial No. 616,539. 2 Claims. (Cl. 281—44.)

1. An apparatus of the character described comprising a base, strips having columned indicia inscribed thereon, means for associating the strips in a side by side arrangement on the base, a finder means slidably connected with the base and extending transversely across the strips, said finder means comprising a bar having inturned opposite extremities, a grooved portion formed in the ends of the base in which said inturned extremities are fitted,



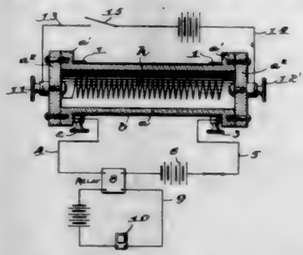
and means on said inturned ends or coacting engagement with the grooved portions to maintain the bars at a right angle to the strips.

1,559,460. ELECTRON TUBE. SAMUEL RUBEN, New York, N. Y. Filed June 30, 1920. Serial No. 393,140. 8 Claims. (Cl. 250—27.)



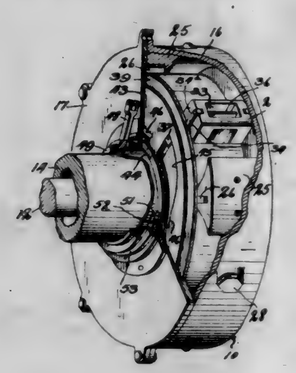
2. An electron tube comprising a thermionic emission element, a primary anode, a secondary anode interposed between said element and primary anode, said secondary anode having an opening therethrough, and adjustable means adapted ti be connetced to a variable current source for focusing the electron stream passing between said element and primary anode in said opening.

1,559,461. GAS AND VAPOR INDICATING DEVICE. SAMUEL RUBEN, New York, N. Y. Filed May 28, 1921. Serial No. 478,460. 5 Claims. (Cl. 73—51.)



1. A gas detecting apparatus comprising an insulating body, a coating of adsorption material thereon, an electric circuit including said material, and an indicator controlled by the current flow in said circuit.

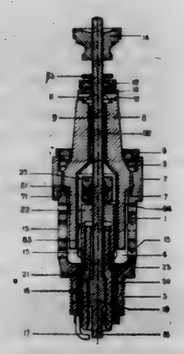
1,559,462. HYDRAULIC BRAKE. ROBERT M. RYAN, Minneapolis, Minn. Filed Nov. 13, 1924. Serial No. 749,758. 9 Claims. (Cl. 188—90.)



1. A brake comprising a central fixed member, an exterior rotatable drum larger than the exterior of the fixed member, the space between the drum and fixed member being designed to be filled with liquid, inwardly projecting abutments at intervals on the rotatable member defining a series of compartments, outwardly projectable plungers mounted upon the fixed member for movement toward or from the surface of the drum, and manually operable means for simultaneously projecting or withdrawing all of said plungers.

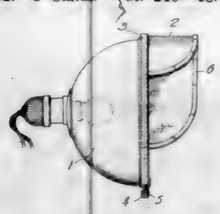
---

1,559,463. SPARKING PLUG. MICHELANGELO SACCHI, Turin, Italy. Filed July 30, 1924. Serial No. 729,175. 1 Claim. (Cl. 123—169.)



A sparking plug of the kind described, comprising a cylindrical hollow body having an internally threaded projection, a metallic bush screwed into said projection, a flange at the innermost end of said bush, a contracted insulating member fitted in said bush against the lower face of the flange therein, a cylindrical hollow portion of said insulating member projecting over said flange, a barrel-like insulating member surrounding said cylindrical hollow portion, means being provided to secure together both the internal insulating member and the free edge of the barrel member against the flange in the metallic bush

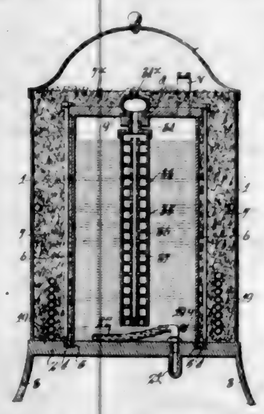
1,559,464. SPOTLIGHT ATTACHMENT. ARTHUR C. SACHSE, Detroit, Mich. Filed Sept. 24, 1924. Serial No. 739,652. 1 Claim. (Cl. 240—48.)



In combination with a vehicle headlight having a lens, a shield or visor extending forwardly of the lens and made of a colored transparent material, said shield or visor being of a length substantially half the circumference of the lens and occupying a position covering the whole of the upper left quadrant, slightly less than half the lower left quadrant, and a portion in excess of half of the upper right quadrant.

---

1,559,465. MIXING DEVICE FOR CARBONATING APPARATUS. ELI EDWARD SAGER, Seattle, Wash. Filed Aug. 13, 1924. Serial No. 731,784. 2 Claims. (Cl. 261—123.)



1. In carbonating and dispensing apparatus of the type wherein is provided a reservoir with a fluid outlet in its top in which the liquid and gas are charged and from which they are dispensed; a mixing device consisting of a tube secured to the top of the reservoir and extending down within the same adjacent the bottom thereof, a series of perforated disks fitting the tube and located within the same, spacers between adjacent disks and a rod on which said disks and spacers are located, and means to hold said rod in place, all being arranged whereby the contents of said reservoir will be caused to pass upwardly through said tube and the perforated disks from the bottom of said reservoir to the place of discharge thereby mixing the gas and liquid.

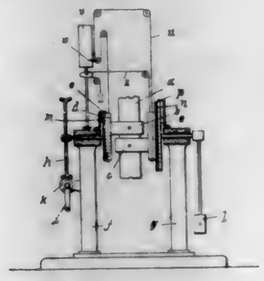
1,559,466. APPARATUS FOR TESTING THE STRENGTH OF PASTEBOARD, CARDBOARD, AND THE LIKE. ALFRED SCHOPPER, Leipzig, Germany. Filed Mar. 19, 1924. Serial No. 700,204. 4 Claims. (Cl. 265—2.)

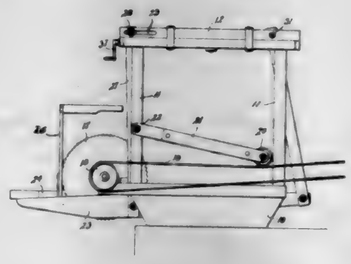
1. In apparatus for the purpose set forth the combination of two plates, two rotatable carriers for said plates, having their axes of rotation in alignment with each other, each plate having an edge parallel with said axis, means for attaching a test piece to both said plates, means opposing progressively increasing re-



sistance to the rotation of one of said plate carriers from a position of rest, means for imparting rotation to the other plate carrier, and means for measuring the rotation imparted to said plate carriers respectively.

---

1,559,467. SAW RIG. WALTER H. SEAVEY, Kearsarge, N. H. Filed Mar. 16, 1925. Serial No. 16,009. 2 Claims. (Cl. 143—58.)

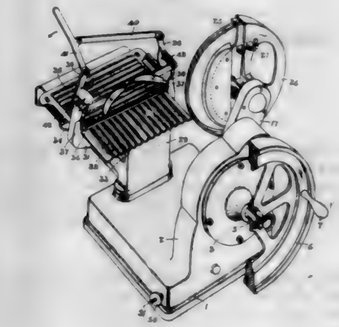


1. A saw rig comprising a supporting frame, a saw blade mounted for rotation thereon, means whereby the blade may be driven, a feeding frame comprising spaced substantially horizontally disposed beams, a feeding table secured to the front ends of the beams and normally spaced from the saw, front hanger bars having their lower ends pivotally secured to the beams and their upper ends pivotally supported in the supporting frame, rear hanger bars having their lower ends pivotally secured to the lower ends of the beams and their upper ends pivotally secured to the supporting frame in advance of the pivotal connections of their lower ends, whereby the table will normally swing in a direction away from the saw and means for regulating the point of connection of the front hanger bars and the supporting frame.

---

1,559,468. SLICING MACHINE. CHARLES N. SOWDEN, Toronto, Ontario, Canada. Filed Mar. 8, 1923. Serial No. 623,675. Renewed Sept. 24, 1925. 7 Claims. (Cl. 146—103.)

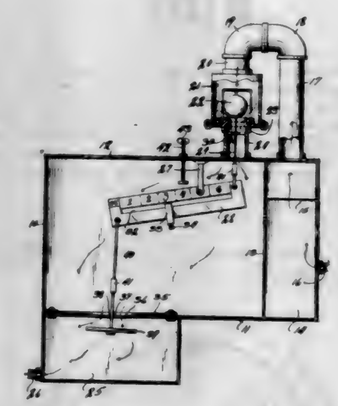
1. In a slicing machine, the combination with a base, a swinging knife arm supported from said base, a rotatable knife and means for rotating the knife, of an arm rigidly connected with said pivotal knife arm, a wheel operatively connected with the knife driving mechanism having a pin slidably engaging the latter arm and operating same with an accelerating return movement, and



a carriage supported from said base at the end thereof opposite the aforesaid mechanism and operatively connected therewith.

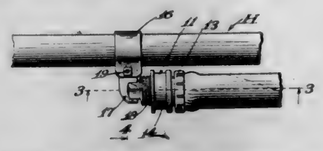
---

1,559,469. AUTOMATIC GAS CUT-OFF. HARRY R. STAMBAUGH, Fostoria, Ohio. Filed Mar. 19, 1925. Serial No. 16,852. 4 Claims. (Cl. 67—115.)



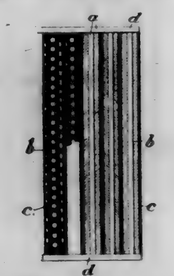
1. A flow operated automatic gas cut off including a chamber, a gas line leading into the chamber, a valve therein, an outlet opening from the chamber, a flow operated valve disposed across said opening and when shifted against the direction of flow closing said opening, a balance lever pivotally mounted within the chamber and having means at one end for shifting the first named valve from its seat, means at the other end operatively connecting this end of the lever to the second named valve, a weight shiftable along the balance lever from a point adjacent one end to a point adjacent the other, and means for manually depressing that end of the lever connected to the second named valve.

1,559,470. DEVICE FOR FACILITATING THE COILING OF HOSE AND THE LIKE. JONATHAN P. STEWART, Alhambra, Calif. Filed Apr. 13, 1925. Serial No. 22,760. 6 Claims. (Cl. 24—19.)



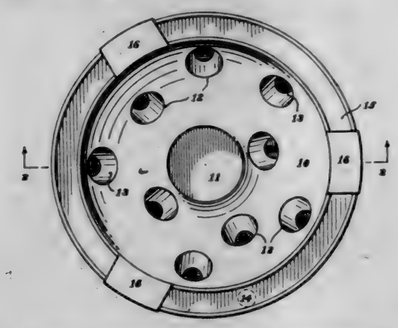
1. A device for facilitating the coiling of garden hose comprising a band adapted to encircle a garden hose, and a threaded member secured thereto having threads which are complementary to the threads on one of the coupling members on the conventional garden hose.

1,559,471. LEAD ELECTRODE FOR ACCUMULATORS. ALBERT STRASSER, Rorschach, Switzerland. Filed Mar. 5, 1924. Serial No. 697,047. 2 Claims. (Cl 136—75.)



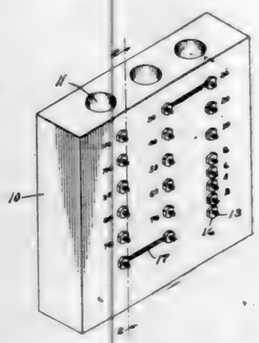
1. A process for the manufacture of lead electrodes for accumulators, consisting in alloying metallic lead with an alkali metal capable of reducing water, then introducing this alloy into perforated insulating shells and finally dipping these shells for a sufficient time into water to fully extract the alkali metal from the alloy and to thus give to the active mass a uniform porosity throughout with recrystallization of lead.

1,559,472. GAME. HORACE K. SUBERS, Ashbourne, Pa. Filed Jan. 23, 1923. Serial No. 614,446. 3 Claims. (Cl. 273—115.)



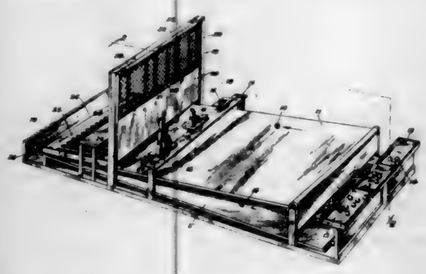
1. A game comprising an inverted frusto-conical bowl having a laterally extending race-way about its upper open end, the inner side of said race-way being provided with openigs at circumferentially spaced points to establish communication between the race-way and the interior of the bowl, a plurality of pockets carried by the bowl and spaced in irregular formation and extending outwardly from the outer surface of the bowl, and bridges spanning said race-way at circumferentially spaced points.

1,559,473. LIQUID RHEOSTAT. HOWARD A. TAYLOR, Watertown, N. Y. Filed July 8, 1924. Serial No. 724,836. 3 Claims (Cl. 201—57.)



1. A rheostat comprising a body of insulating material formed with a plurality of pockets containig a more or less current conducting liquid, and a plurality of terminals extending to each pocket at spaced points, each terminal including a bolt extending transversely through the body in intersecting relation to the pockets.

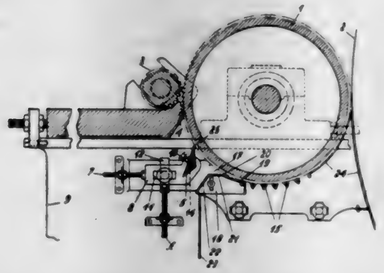
1,559,474. AMUSEMENT APPARATUS. JENSHIRO TERUYA, Coney Island, Brooklyn, N. Y. Filed July 17, 1925. Serial No. 44,282. 9 Claims. (Cl. 273—103.)



1. An amusement apparatus including spaced targets at which balls are adapted to be thrown to upset the same, a back-stop positioned behind said targets, doors provided in said back stop in alignment with the respective targets, and means for automatically returning the thrown balls to a point adjacent that from which they are thrown.

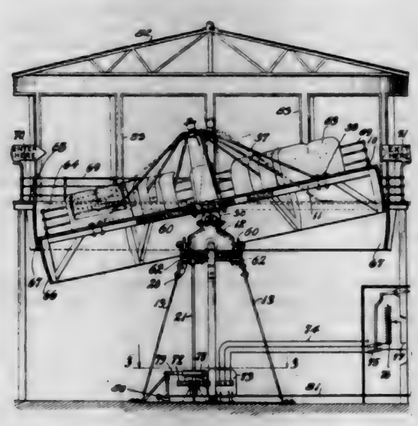
9. An amusement apparatus including a counter, spaced targets supported at a distance on the inside of said counter, a swingingly mounted cushion member disposed behind said targets, each target embodying a plurality of objects, balls adapted to be thrown at said targets to upset the objects, and means for returning the thrown balls to a point adjacent said counter and for trapping the upset objects behind said cushion member.

1,559,475. CARDING ENGINE. MEINRAD THOMA, Zurich, Switzerland. Filed Aug. 18, 1923. Serial No. 658,121. 2 Claims. (Cl. 19—105.)



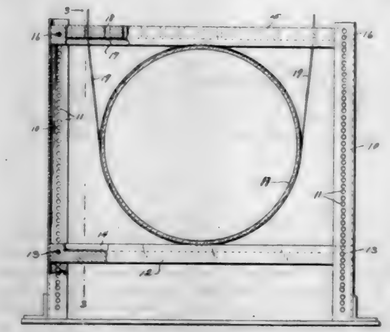
2. In a cotton carding engine, a licker-in and licker-in-grid, the said grid comprising three sections of which the first section is formed by a broad member inclined to the periphery of the licker-in rotatable about a pivot, said member forming together with the periphery of the licker-in an aperture which is reduced rearward, the surface of the said member directed towards the licker-in being bevelled and presenting a steep front face and a less steep rear face, and an additional arcuate face the chord of which inclines rearwardly toward the periphery of the licker-in, the second section of the grid comprising a plurality of narrow grid bars and the third section a wall of sheet metal closely adjacent to the periphery of the licker-in, and means to lock said first section in adjusted position.

1,559,476. TILTABLE ROUNDABOUT. ERNST F. TROIKE, Sandusky, Ohio. Filed Mar. 1, 1924. Serial No. 696,353. 16 Claims. (Cl. 272—50.)



1. In a tiltable roundabout, a rotatable head, a universal joint mounted thereon for bodily rotation, a platform support carried by said joint and rotatable about the rotative axis of the head, a shaft depending from said support, and a connection from the head to effect movement of one end of said shaft alternately in opposite directions during continued rotation of the universal joint.

1,559,477. CYLINDRICAL-GLASS-CUTTER HOLDER. JACKSON R. UHLER, Tatamy, Pa. Filed May 13, 1924. Serial No. 713,073. 6 Claims. (Cl. 49—50.)



1. Means for cutting glass cylinders comprising clamping members adapted to clamp the cylinder between them, and a cord adapted to be disposed around the cylinder and oscillated, said clamping members having means for guiding the cord and preventing any movement of the cord out of the plane of cutting.

1,559,478. PROCESS OF MAKING A CALCIUM PREPARATION. HEINRICH UMBER, Berlin, Germany, assignor to Johann A. von Wülfing, Berlin, Germany. Filed May 28, 1923. Serial No. 642,107. 5 Claims. (Cl. 167—7.)

1. The process of manufacturing a calcium preparation which consists in mixing together highly concentrated lactic acid, a corresponding amount of concentrated caustic soda and quicklime, and drying the resulting product at low temperature.

5. As a new composition of matter, a calcium preparation of great purity comprising sodium lactate, calcium lactate, and water of crystallization produced by a mixture of highly concentrated free lactic acid, caustic soda and quicklime.

1,559,479. CEILING-WASHING APPARATUS. PETER USHATCH, New York, N. Y. Filed May 17, 1924, Serial No. 713,874. Renewed Sept. 10, 1925. 1 Claim. (Cl. 15—50.)

A device of the type described comprising an open topped casing, a rotary channeled brush support in said casing, a brush mounted in said support for vertical movement therein and to be rotated therewith, springs in said support on which the brush rests, and a liquid feed pipe for supplying liquid to said brush said pipe extending freely into the said brush to permit of movement of the brush relative to the said pipe.

1,559,480. SAFETY CATCH. ALFRED VEILLETTE, Attleboro, Mass., assignor to James C. Doran & Sons, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 28, 1923. Serial No. 683,192. 20 Claims. (Cl. 24—157.)

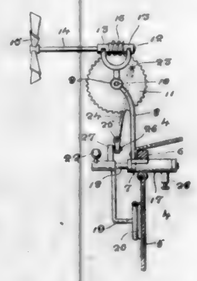
1. A safety catch for pins and the like, having a body portion and a pin tongue pivoted thereon, comprising in combination a longitudinally slotted stationary member securely attached to the pin body portion, having a cylindrical trunnion projecting longitudinally therefrom, and a longitudinally slotted guard member revolubly mounted on said trunnion and secured to the trunnion against longitudinal movement.

1,559,481. FLASH LIGHT. LEE J. VOORHEES, New York, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed June 29, 1920. Serial No. 392,708. Renewed Jan. 10, 1925. 21 Claims. (Cl. 240—10.5.)

1. A spare lamp-holder for flashlights comprising a threaded shell removably attachable to a flashlight casing, a wall intermediate the ends of said shell providing a spare lamp compartment, lamp holding means carried by said wall, and a removable cap closing said compartment.

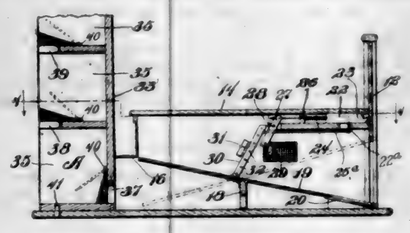
1,559,482. WINDSHIELD WIPER. JOHN BRYAN WACHTMAN, Conway, S. C. Filed Apr. 17, 1925. Serial No. 23,886. 2 Claims. (Cl. 15—253.)

1. A device of the character described comprising a sleeve adapted to be mounted horizontally adjacent the wind-shield of an automobile, a rock shaft journaled therein, a wiping element fixed to the rock shaft and movable over the windshield, an upstanding arm carried by the sleeve, a rotatable element journaled in the arm, bearings formed on the arm, a forwardly extending shaft journaled in the bearings and having operative engagement with the rotatable element, a wind wheel fixed to



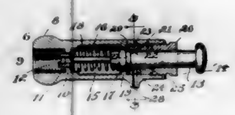
the shaft, a pitman rod eccentrically connected with the rotatable element and a universal connection between the pitman rod and rock shaft.

1,559,483. AUTOMATICALLY-SET ANIMAL TRAP. FINNIS N. WATKINS, Picher, Okla. Filed Apr. 23, 1925. Serial No. 25,378. 6 Claims. (Cl. 43—76.)



1. A trap of the character described including a body having a vertical sliding door at one end, a platform hingedly supported at its middle and extending lengthwise of the body, one end of the platform being disposed in the path of movement of the door, a latch adapted to hold the door raised, a bait holder operatively engaged with the latch to release the same when the bait is pulled, and means disposed approximately at the middle of the platform permitting the passage of an animal from the forepart of the platform to the rear thereof only whereby to cause the downward movement of the rear of the platform and the upward movement of the door, the latch automatically engaging the door when it is raised.

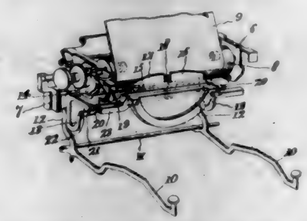
1,559,484. LIQUID-SOAP PUMP. EARL G. WATROUS, Chicago, Ill. Filed Apr. 25, 1918. Serial No. 230,662. 11 Claims. (Cl. 221—102.)



7. In a pump of the character set forth, the combination of a body having a chamber therein with a relatively small intake orifice at one end, a displacement plunger coacting with said chamber and adapted to be withdrawn from said chamber to permit the chamber to be filled, said chamber having a discharge orifice which is closed when the plunger is withdrawn from the chamber, and a pin on said plunger which fits said intake orifice and closes the same when the plunger is moved into the chamber.

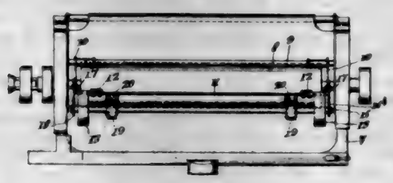
10. In a soap dispenser the combination of a chamber having an inlet and an outlet, a packing washer coacting with the outlet and having a hole therethrough of the same diameter as the outlet, a displacement plunger coacting with said chamber and fitting in said outlet, said plunger embodying a cylindrical portion which fits the hole in the washer and a flange on the cylindrical portion adapted for engagement with the face of the washer, the plunger having a reduced portion to provide a discharge passage.

1,559,485. TYPEWRITER-LINE GUIDE. HAZARL E. WEST, Washington, D. C. Filed July 28, 1923. Serial No. 654,447. 1 Claim. (Cl. 197—190.)



In a typewriter having an under frame, a case-shift frame thereon, a platen mounted in the case-shift frame, pivoted brackets in the under frame coupled to the case-shift frame and acted on by the shift keys, a line guide comprising a body bar, wings pivotally mounted on said bar and spring pressed toward the platen, and said bar extending to the sides of the machine and provided with downwardly extending lugs, and curved arms secured to said lugs and extending to the pivoted brackets.

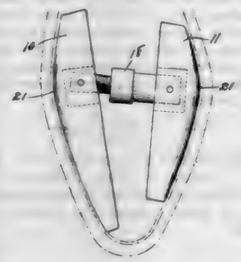
1,559,486. PAPER GUIDE FOR TYPEWRITERS. HAZARL E. WEST, Washington, D. C. Filed July 28, 1923. Serial No. 654,448. 3 Claims. (Cl. 197—139.)



1. In a typewriter, a platen, a rod extending above and to the rear of the platen, arms pivotally mounted on said rod, a bar connecting said arms, other arms pivotally carried by the first mentioned arms, a second rod supported in said other arms and extending longitudinally above and in front of said platen, paper guide fingers supported on said second rod, rolls in said guide fingers to space the guide fingers from the platen, and resilient means carried by said bar and bearing directly on said second rod for forcing the rolls against the platen and paper thereon.

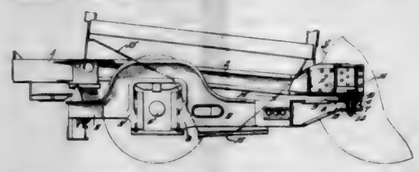
1,559,487. SHOE STRETCHER. WILLIAM W. WHITE, Moccasin, Mont. Filed Oct. 18, 1924. Serial No. 744,433. 2 Claims. (Cl. 12—128.5.)

1. A shoe stretcher comprising a pair of right and left companion members adapted to be placed within a shoe, and designed to conform to the shape thereof, and adjustable means connecting said members whereby the latter can be moved toward and away from each other, said means including sections pivoted on said members



whereby either member can be shifted longitudinally of the shoe independently of the other member for the purpose specified.

1,559,488. LOCOMOTIVE CONSTRUCTION. STANLEY G. WIGHT, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Oct. 17, 1923. Serial No. 668,990. 7 Claims. (Cl. 105—174.)

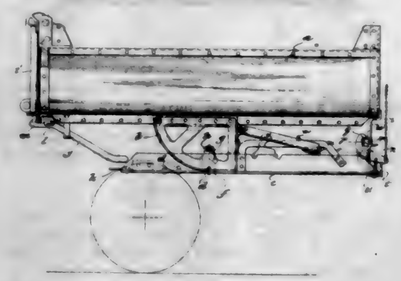


1. In a railroad vehicle, interengaging center plates and a removable center pin extending through said center plates and rigidly secured to one of said center plates and having limited longitudinal movement through the other of said center plates.

1,559,489. PROCESS OF MAKING HYDRATED ALUMINA AND BY-PRODUCTS. GLEN LEONARDO WILLIAMS, Detroit, Mich. Filed Dec. 29, 1923. Serial No. 683,432. 6 Claims. (Cl. 23—148.)

1. The process of preparing hydrated alumina in granular form which comprises precipitating a solution of potassium aluminate with boiler furnace gases.

1,559,490. DUMP BODY. JAMES G. WINSOR and SEIZO HATASHITA, Detroit, Mich. Filed June 30, 1923. Serial No. 648,646. 3 Claims. (Cl. 298—38.)



3. In a vehicle as specified, the combination of a subframe provided with a rail, a hopper supported thereon, a rocker secured to the hopper and adapted to roll on

the rail carried by said subframe, and a jump lock comprising a keeper member secured to the rail provided with a retaining portion having its lower engaging face curved in the form of an inverted crown and a lug carried by the rocker arranged to roll under the said retaining portion of the keeper member and wedge against the lowermost point of the inverted crown to lock the hopper to the subframe, said lower engaging face of the retaining portion curved to provide clearance for the lug to enter thereunder.

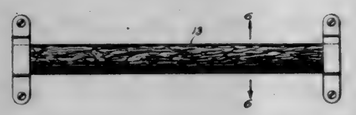
---

1,559,491. DECORATIVE CANDLE AND MOUNTING THEREOF. ROBERT O. WOOD, Elizabeth, N. J., assignor of one-half to Pitser Miller, Elizabeth, N. J. Filed Feb. 23, 1924. Serial No. 694,528. 9 Claims. (Cl. 41—10.)

2. As a decorative article, a transparent tube filled with tightly compressed, textile fiber.

---

1,559,492. ORNAMENTAL TUBULAR FORM. ROBERT O. WOOD, Elizabeth, N. J., assignor of one-half to Pitser Miller, Elizabeth, N. J. Filed Mar. 23, 1925. Serial No. 17,597. 8 Claims. (Cl. 41—10.)



1. An ornamental tubular form, comprising a transparent tube, a flexible sheet having yarn or floss adhesively secured thereto and fitted in said tube to expose such yarn against the inner wall of the tube, and means for pressing closely and flattening such yarn against the walls of the tube.

---

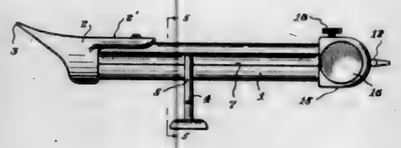
1,559,493. GRID-LEAK RESISTANCE. RUDOLF WOODS and WILLIAM HENRY LE BRETON, London, England. Filed Aug. 8, 1924. Serial No. 730,908. 4 Claims. (Cl. 201—58.)

1. A grid leak, comprising a tubular container having a restricted bore at a predetermined part between its ends, a contact plug closing one end of the container, resistance material inclosed in the container between the restricted part and the contact plug, an internally screwthreaded member closing the other end of the container, and a screwthreaded contact pin engaging with the

screwthreaded member and provided with an extension which fits in the said restricted part and bears on the resistance material.

---

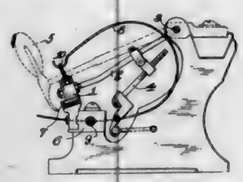
1,559,494. COMBINATION TOOL. MELCHOIR ZUGERMAYER, Egg Harbor City, N. J. Filed Mar. 19, 1924. Serial No. 700,346. 2 Claims. (Cl. 254—26.)



1. A tool comprising a cylindrical body having a head at one end thereof, said head having its upper surface concavely curved and its under surface beveled for providing a substantially wedge-shaped outer end, and said head being provided with a notch extending inwardly from its wedge edge, said body having longitudinally extending grooves in its sides, a fulcrum including a base and upstanding arms, said arms having trunnions formed upon their upper ends and engaging slidably in said grooves.

---

1,559,495. HAMMER-RAIL SPRING. GEORGE F. ABENDSCHEIN, Rutherford, N. J., assignor to The Staib-Abendschein Company, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1922. Serial No. 584,937. 4 Claims. (Cl. 84—221.)



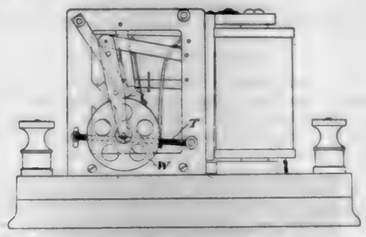
3. In a piano action, the combination with the hammer lifting rail of steel bow springs connected at one end to a stationary support rail in the piano, by means whereby the point of such connection may be varied in order to vary the effective length and lifting force of the springs and at the other end to the said lifting rail as herein described.

1,559,496. SHIFTING LEVER FOR FISHING REELS. WALTER L. ADAMS, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 13, 1923. Serial No. 657,153. 1 Claim. (Cl. 242—84.1.)

In a fishing reel an end member, a lever pivoted on said end member, the end of the lever extending to the outer periphery of the end member and having an integral operating extension formed by bending the end of the lever so as to form a closed flattened loop lying over the rim of the end member.

---

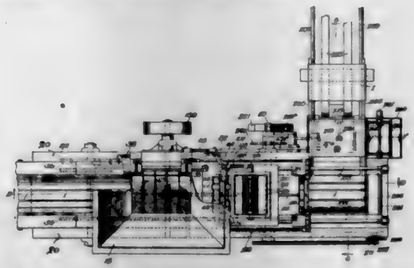
1,559,497. SELECTIVE SIGNALING DEVICE. WILLIAM T. BAKER, Westwood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1925. Serial No. 22,148. 3 Claims. (Cl. 177—332.)



1. In a selective signaling apparatus having a timing mechanism including a retarding or inertia wheel, an inclined track upon which said wheel is adapted to roll consisting of a vitreous rod having an etched or ground surface.

---

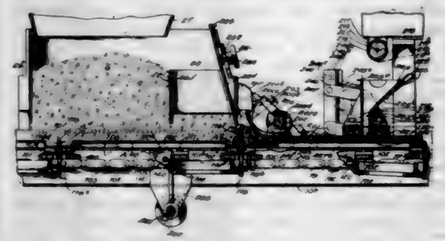
1,559,498. TILE-MAKING MACHINE. CLAUS O. BRANDELL, Chicago, Ill., assignor of one-half to Carl A. Carlson, Cicero, Ill. Filed Mar. 28, 1921. Serial No. 456,835. 72 Claims. (Cl. 25—48.)



68. In mechanism of the class described, in combination pallet-supporting and conveying means, a material container located thereabove, means to discharge material from said container upon a pallet carried by said conveying means in its discharge therebeneath, tamping means located above said conveying means, a second container located above said conveying means, trowelling mechanism also located above said conveying means, all of said mechanisms being located in succession in the direction of travel of said conveying means, a fixed pallet support constructed and arranged to receive pallets from said conveying mechanism, intermittently operating feeding means operable to move said pallets upon said fixed support, and means to engage and remove pallets transversely from said fixed support.

---

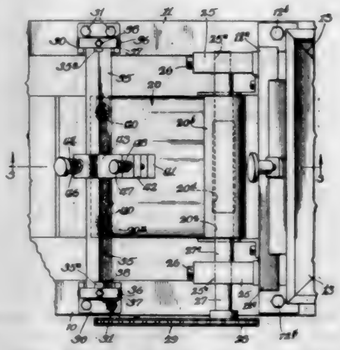
1,559,499. PROCESS AND MACHINE FOR MAKING TILE. CLAUS O. BRANDELL, Chicago, Ill., assignor of one-half to Carl A. Carlson, Cicero, Ill. Filed Jan. 30, 1922. Serial No. 532,534. 69 Claims. (Cl. 25—93.)



1. In mechanism of the class described, sprockets, endless chains engaging said sprockets, cross members carried by said chains, said cross members being spaced apart to support the pallets adjacent the ends of the latter, and separating members carried by said conveyor chains and provided with portions movable into and out of position between the ends of adjacent pallets.

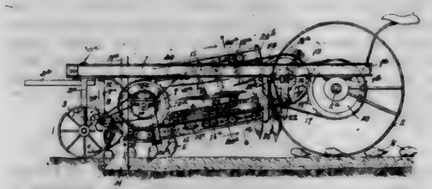
---

1,559,500. CONCRETE TILE MACHINE. GUSTAVE LIDSEEN, Chicago, Ill., assignor to Concrete Tile Machinery Company, Cicero, Ill., a Corporation of Illinois. Filed June 2, 1923. Serial No. 642,943. 17 Claims. (Cl. 25—43.)



1. In mechanism of the class described, in combination with material carrying means, a tamping member, said member being eccentrically mounted adjacent one end and arranged for regulated movement vertically and horizontally adjacent the other end.

1,559,501. BEET HARVESTER. EPHRAIM BURDICK, Madison, Ohio, assignor of one-half to Ulysses A. Ento, Cleveland, Ohio. Filed July 13, 1922. Serial No. 574,712. 21 Claims. (Cl. 55—108.)



1. In a vegetable harvester, including vegetable lifting and top guiding mechanism, vegetable top engaging roller elements, and means for actuating said vegetable top engaging roller elements in reverse direction.

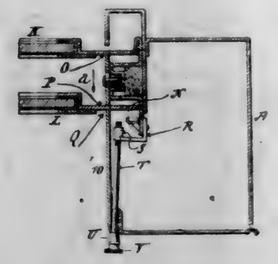
2. In a vegetable harvesting machine, including vegetable lifting and top guiding mechanism, roller and carrier means for engaging and carrying said vegetables through their tops, means for driving the rollers in a reverse direction and means for severing said vegetables.

7. In a vegetable harvester, a wheeled harvester frame, means for lifting and guiding the vegetables and tops, respectively, a carrier provided with independently actuated relatively movable coacting means for engaging said vegetable tops and carrying said vegetables thereby, and means for severing said vegetables from the tops as held by said top engaging mechanism, and means for giving reverse movement to the top engaging means.

20. In a vegetable harvesting machine, including vegetable lifting and longitudinally extending rotary top guiding mechanism, a transversely movable carrier provided with longitudinally extending top engaging elements in cooperative relation to said vegetable lifting and rotary top guiding mechanism for carrying and conveying the vegetables through the engaged tops.

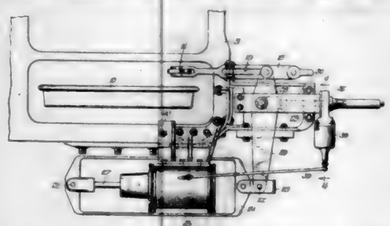
---

1,559,502. METAL WINDOW FRAME AND SASHES. HARRY E. CAMPBELL, New York, N. Y., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed May 12, 1922, Serial No. 560,288. Renewed Sept. 2, 1925. 4 Claims. (Cl. 189—72.)



3. A window frame and sash construction comprising jambs, each having two vertical openings in its inner wall, dividing such inner wall into two side sections and a middle section, and sashes adapted to slide in said openings and adjustable means within the jambs for holding the sashes in relatively close contact with the middle section of each jamb wall, such means being operable without moving either of the side sections of the jamb wall.

1,559,503. TRUCK BRAKE. WILLIAM H. CLEGG, Montreal, Canada, assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 5, 1923. Serial No. 666,670. 5 Claims. (Cl. 188—208.)



3. In a railway car truck, the combination of a truck frame, a brake cylinder secured to said truck frame at the inner end of one side of said frame, a yoke surrounding said cylinder and operated therefrom, a truck lever, and a lever operatively connected to said yoke and to said truck lever for transmitting braking movements.

---

1,559,504. PROCESS FOR PRODUCING ALKALI-METAL XANTHATES. RUSSELL B. CROWELL, Agnew, and GERALD F. BRECKENRIDGE, San Jose, Calif., assignors to Western Industries Company, Agnew, Calif., a Corporation of California. Filed May 18, 1925. Serial No. 31,203. 10 Claims. (Cl. 260—106.)

1. The process of producing alkali metal xanthates which comprises reacting a hydroxide of an alkali-metal, alcohol, and carbon bisulphide, in a liquid hydrocarbon medium chemically inert to the remaining ingredients.

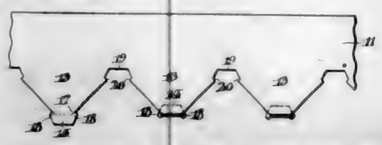
---

1,559,505. ORNAMENTAL FABRIC EDGING. JAMES G. CURRIE, Philadelphia, Pa., assignor to Sibson & Stern, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1920. Serial No. 433,060. 10 Claims. (Cl. 66—4.)

1. As a new article of manufacture an ornamental edging for female underwear consisting of a knit fabric longitudinally divided by a suture formed by correlation of fabric structural elements, thereby to promote a folding tendency in the fabric along said suture in one direction only.

---

1,559,506. ROOF COVERING. WILLIAM FREEGARD, St. Louis, Mo., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 24, 1923. Serial No. 620,873. 7 Claims. (Cl. 108—8.)



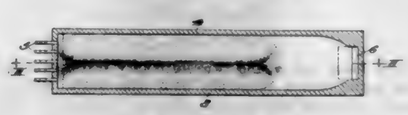
1. A shingle strip of flexible water-proof material having one longitudinal edge formed with alternating angular projections simulating point-down shingle ends and recesses of corresponding size and configuration, each of said angular projections having an integral tip enlargement with converging incisions defining opposed lateral projections, and said tip enlargements being adapted to be folded under to constitute a locking tab.

1,559,507. PRESERVING GROUND-LINE SECTION OF POLES. RANDOLPH LEEDOM, Clifton, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed May 10, 1924. Serial No. 712,467. 3 Claims. (Cl. 99—12.)

3. The process of preserving the ground line section or belt of standing wood poles from decay, which comprises forming an annular envelope about the section to be preserved, forming an impervious bond between the lower margin of said envelope and the pole, and filling the enclosed space with a preservative.

---

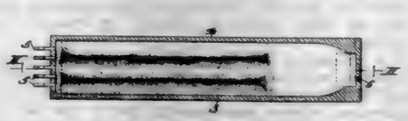
1,559,508. SMELTING FURNACE AND THE METHOD OF SMELTING ORES THEREIN. GEORGE W. PRINCE, Clemenceau, Ariz., and ARCHIBALD DOUGLAS, New York, N. Y., assignors to United Verde Extension Mining Company, New York, N. Y., a Corporation of Delaware. Filed June 9, 1925. Serial No. 35,862. 14 Claims. (Cl. 263—40.)



1. The method of smelting ores in reverberatory furnaces which consists in substantially continuously feeding the ores into the furnace chamber in such a manner that a continuous longitudinal mound is formed and maintained with its apex spaced from the side walls of the furnace chamber, and subjecting the mound to the action of a heating medium.

---

1,559,509. SMELTING FURNACE AND THE METHOD OF SMELTING ORES THEREIN. GEORGE W. PRINCE, Clemenceau, Ariz., and ARCHIBALD DOUGLAS, New York, N. Y., assignors to United Verde Extension Mining Company, New York, N. Y., a Corporation of Delaware. Filed June 9, 1925. Serial No. 35,863. 23 Claims. (Cl. 263—40.)

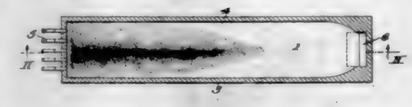


1. The method of smelting ores in reverberatory furnaces which consists in substantially continuously feeding the ores into the furnace chamber in such a manner that a plurality of continuous longitudinal mounds are formed and maintained with the apices spaced from each other and from the side walls of the furnace chamber, and subjecting the mounds to the action of a heating medium.

---

1,559,510. SMELTING FURNACE AND THE METHOD OF SMELTING ORES THEREIN. JOHN A. CHURCH, Jr., New York, N. Y., assignor to United Verde Extension Mining Company, New York, N. Y., a Corporation of Delaware. Filed June 9, 1925. Serial No. 35,902. 12 Claims. (Cl. 263—40.)

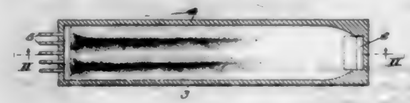
1. The method of smelting ores in reverberatory furnaces which consists in feeding the ores into the furnace chamber in such a manner as to produce gradually widening valleys for the free flow of the molten



material from the firing end toward the flue end of the furnace, and subjecting the ores to the action of a heating medium.

---

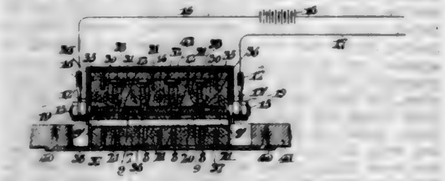
1,559,511. SMELTING FURNACE AND THE METHOD OF SMELTING ORES THEREIN. JOHN A. CHURCH, Jr., New York, N. Y., assignor to United Verde Extension Mining Company, New York, N. Y., a Corporation of Delaware. Filed June 9, 1925. Serial No. 35,903. 15 Claims. (Cl. 263—40.)



15. A reverberatory furnace having unfettled side walls, means for feeding the ores into the furnace chamber to form two continuous longitudinal mounds of gradually decreasing heights from the firing end toward the flue end of the furnace with the apices of the mounds spaced from each other and from the side walls to produce gradually widening valleys between the mounds and along the side walls for the free flow of the molten material, and means for subjecting the mounds to the action of a heating medium, the portions of the said side walls which are exposed to the molten material being of a non-corrosive material.

---

1,559,512. ELECTRIC SWITCH. CHARLES L. TURNER, Jersey City, N. J. Filed Aug. 24, 1923. Serial No. 659,060. 10 Claims. (Cl. 200—48.)



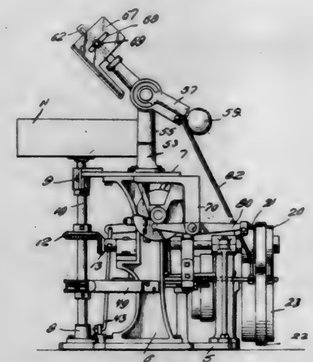
1. An electric switch comprising a base provided with a series of open recesses, a corresponding series of permutative switch members journalled therein for step-by-step rotation, axially aligned contacts inset in said base adapted for co-operative circuit-closing engagement with the switch members when permutatively moved, and an arresting datum for establishing a predetermined permutation.

---

1,559,513. BAT-FORMING MACHINE. ALBERT C. WARD, Canonsburg, Pa., assignor to The W. S. George Pottery Company, Canonsburg, Pa. Filed Jan. 17, 1925. Serial No. 3,144. 8 Claims. (Cl. 25—22.)

1. In a bat forming machine of the character described, a turn table, a spreader blade, means for rotating the turn table, means for moving the spreader blade slowly

inwardly toward and slowly downwardly toward the central point of the turntable during the rotation of the same, means for automatically quickly raising the



spreader blade from the material, and additional means for moving the spreader blade longitudinally to one side of the turntable.

---

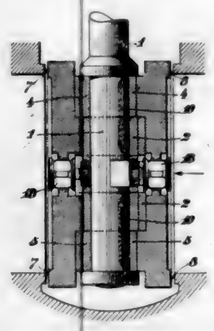
1,559,514. SOUND BOX AND TONE ARM. JACOB ZITZERMAN, Brooklyn, N. Y. Filed June 30, 1923. Serial No. 648,704. 3 Claims. (Cl. 274—35.)

2. A sound box for sound reproducing machines comprising a pair of mating semi-spherical sections one of said sections having at its open edge internal and external annular rabbets, the internal rabbet being of greater depth than the external rabbet and defining an annular seat at its inner end, the other section having concentric inner and outer spaced flanges at its open edge, the inner flange being of greater width than the outer flange and designed to be received within the internal rabbet of the other section to coact at its outer end with the seat to clamp a diaphragm thereagainst, the outer flange fitting within the outer rabbet and defining together with the inner flange a groove for the reception of the projecting portion of the other section, and fastening elements extending radially through the outer and inner flange of one of the sections and the projecting portion of the other section, the said first mentioned section having an axially projecting radially apertured collar and the flanges of the said second section and open edge at the first section having alined notches for receiving therethrough the stylus bar of the diaphragm.

---

1,559,515. VALVE. ARNO BÖTTNER, Sudenburg, near Magdeburg, Germany, assignor to the Firm Polte, Magdeburg, Germany. Filed June 11, 1925. Serial No. 36,470. 4 Claims. (Cl. 277—38.)

1. A valve comprising two stationary seats, two shutting plates which cooperate with said seats, auxiliary valves, a valve spindle, and means for first opening the auxiliary valves, then lifting the shutting plates from their seats and thereupon shifting the plates in a plane that is parallel to the plane of said stationary seats when the valve spindle is turned.



4. A valve comprising two stationary seats, two shutting plates which cooperate with said seats, auxiliary valves seated in said shutting plates, a spindle for shifting said plates in a plane that is parallel to the plane of said stationary seats, eyes projecting from said shutting plates, internally recessed ring-shaped plate lifting eccentrics embracing said spindle and fitted in said eyes, collars on said auxiliary valves which embrace said spindle, a cam surface on said spindle for opening said auxiliary valves when the spindle is turned, keys fixed in the spindle and located in the recesses of the eccentrics and adapted to turn the later to lift the shutting plates from said stationary seats after the opening of the auxiliary valves when the spindle is turned, the length of said recesses corresponding to the lag between the opening of the auxiliary valves and the lifting of the shutting plates.

1,559,516. MANUFACTURE OF NITROGENIC AND PHOSPHATIC COMBINATIONS. JOSEPH BRESLAUER, Geneva, Switzerland, and GEORGES DARIER, Bordighera, Italy, assignors to Société d'Études Chimiques pour l'Industrie, Geneva, Switzerland, a Corporation of Switzerland. Original application filed Sept. 18, 1920, Serial No. 411,074. Divided and this application filed May 29, 1925. Serial No. 33,835. 23 Claims. (Cl. 71—9.)

1. A process of the type described which comprises, introducing raw calcium cyanamid in small portions in a finely divided condition into water maintained at a temperature between approximately 30° C. and 40° C., to which is added an acid forming insoluble salts with the metallic impurities of said raw calcium cyanamid to precipitate the impurities of each portion as added, removing the precipitated insoluble salts and converting the resulting free cyanamid in solution to urea by sulphuric acid.

---

1,559,517. MANUFACTURE OF NITROGENIC AND PHOSPHATIC COMBINATIONS. JOSEPH BRESLAUER, Geneva, Switzerland, and GEORGES DARIER, Bordighera, Italy, assignors to Société d'Études Chimiques pour l'Industrie, Geneva, Switzerland, a Corporation of Switzerland. Original application filed Sept. 18, 1920, Serial No. 411,074. Divided and this application filed May 29, 1925. Serial No. 33,836. 7 Claims. (Cl. 71—9.)

1. A process of the type described which comprises, forming a solution of free cyanamid and converging said free cyanamid in solution into unrea by means of an acid salt.

1,559,518. MANUFACTURE OF NITROGENIC AND PHOSPHATIC COMBINATIONS. JOSEPH BRESLAUER, Geneva, Switzerland, and GEORGES DARIER, Bordighera, Italy, assignors to Société d'Études Chimiques pour l'Industrie, Geneva, Switzerland, a Corporation of Switzerland. Original application filed Sept. 18, 1920, Serial No. 411,074. Divided and this application filed May 29, 1925. Serial No. 33,837. 8 Claims. (Cl. 71—9.)

1. A process of the type described which comprises, adding finely divided raw cyanamid in small successive portions to water acidified with an acid forming insoluble compounds with metallic constituents of said raw cyanamid, the water being agitated during said addition, removing the insoluble salts from the solution of free cyanamid thus formed, then acidifying said solution with an acid sulphate and heating it to a temperature of approximately 60° C. to 70° C. to hydrate the free cyanamid in solution to urea.

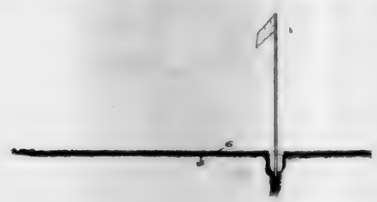
---

1,559,519. TOOTHBRUSH. THOMAS ANDREW BUCKLEY, Brooklyn, N. Y. Filed Aug. 3, 1922. Serial No. 579,391. 2 Claims. (Cl. 15—210.)

1. A holder for an implement for polishing teeth comprising a handle member having one end curled, the extremity of the curled end being disposed adjacent to but slightly spaced from the curled end portion of the handle member and being located within the confines of the curve.

---

1,559,520. PUTTING GREEN AND SIMILAR PLAYING SURFACE. THOMAS MCCULLOCH FAIRBAIRN, Tlahualilo, Durango, Mexico, and ALBERT SAMUEL VALDESPINO, and ROBERT MCCART, Jr., El Paso, Tex. Filed Nov. 14, 1922. Serial No. 600,991. 9 Claims. (Cl. 272—8.)



1. A surfacing material for putting greens, comprising comminuted flocculent material and a viscous substance binding the flocculent material into a homogeneous mass.

---

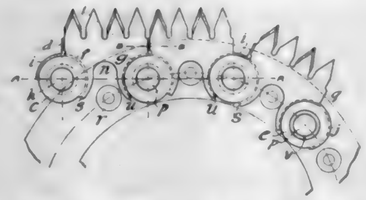
1,559,521. PORTABLE FORGE. LEWIS FERRUSS, Las Vegas, Nev. Filed Dec. 30, 1924. Serial No. 758,950. 1 Claim. (Cl. 10—8.5.)

A forge of the character described comprising an outer shell in the form of a downwardly tapering truncated cone, a bowl of refractory earthenware adapted to fit within said shell and removable therefrom, the shell and bowl being perforated on the bottom, an air pipe entering the perforated lower end of the bowl and shell, and means for distributing the air from said pipe uniformly upward through the upper portion of the bowl comprising a disk of refractory material adapted to be removably seated within the bowl against the downwardly inclined side wall thereof in spaced relation to the bottom thereof and having upwardly projecting nip-

ples formed with air passages, the space between said nipples being adapted to be filled with refractory material.

---

1,559,522. LINK SAW. OTTO EMANUEL FRUNK, Stockholm, Sweden. Filed Jan. 6, 1925. Serial No. 911. 7 Claims. (Cl. 143—135.)



7. A link saw provided with links each of which has two circular portions of reduced thickness, certain of the links being each provided with a central hole and certain other of the links being each provided with a central pivot adapted to enter the corresponding hole of a neighbour link and flanges of approximately rectangular cross section on said portions arranged to enter grooves in the unreduced part of the neighbour links.

---

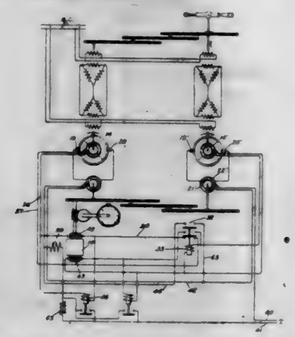
1,559,523. TOOTH-CLEANING DEVICE. OLAF I. WARING, Long Island City, N. Y., assignor to American Druggists Syndicate, Long Island City, N. Y., a Corporation of New York. Filed Aug. 11, 1924. Serial No. 731,350. 2 Claims. (Cl. 15—210.)

1. A tooth cleaning device comprising a handle, a tubular elastic member fixed to the handle with the

handle closing the engaged end, a portion of said elastic member extending beyond said handle and adapted to receive a dentifrice in the pocket so formed.

---

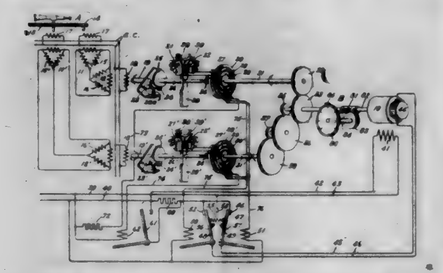
1,559,524. MEANS FOR ACCURATELY REDUCING ANGULAR MOVEMENTS. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Sept. 15, 1921. Serial No. 501,006. 10 Claims. (Cl. 172—239.)



1. Means for reproducing angular motions comprising a receiver of the angular movements of an object, a motor provided with field and armature windings, a source of electrical supply for said motor, electrical connections between said field winding and said source whereby said field winding is continuously energized, and control means for said armature operated jointly by said receiver and said motor whereby said armature is energized to start said motor upon movement of said receiver and short circuited to stop said motor when said motor has reproduced the movement of said object.

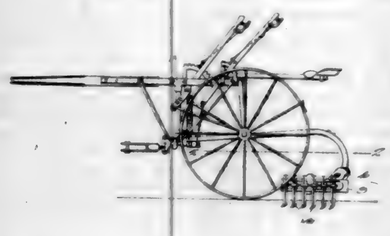
---

1,559,525. MEANS FOR REPRODUCING POSITION. EDWIN J. MURPHY and LEONARD P. HUTT, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Dec. 16, 1921, Serial No. 522,946. Renewed July 27, 1925. 22 Claims. (Cl. 172—239.)



1. Means for reproducing position comprising in combination with a controlling object and a driven object, of an electric motor for driving said driven object, a contact device for controlling said motor operated upon a slight movement of the controlling object in either direction to close a circuit for movement of the driven object in either of two directions, and an operating connection between said controlling object and said contact device for controlling said contact device to cause the driven object to assume any position of the controlling object by the shortest path thereto regardless of the course of the controlling object.

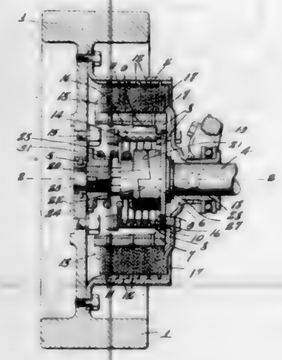
1,559,526. CULTIVATOR. IVAN H. OSBORN, Fort Smith, Ark. Filed Sept. 3, 1924. Serial No. 735,709. 1 Claim. (Cl. 97—5.)



In combination with an implement beam having a longitudinally extending slot in its lower end, an angle-shaped shoe having a sloping rear face a curved recess in the said rear face for receiving the front part of the lower end of the beam, said shoe having a transverse slot therein, a bolt passing through the slots for adjustably connecting the shoe to the beam, the front face of the shoe being inclined in a vertical plane, a plow bar abutting said face and a single bolt passing through the bar and shoe for adjustably clamping the bar to the shoe.

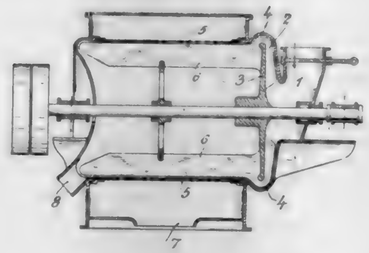
---

7,559,527. EQUALIZING CLUTCH. CHARLES B. SPARE, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed June 12, 1923. Serial No. 644,883. 2 Claims. (Cl. 192—69.)



1. In a clutch, the combination of driving and driven elements, the driven element including a shaft arranged coaxially with the driving element, a member having a hub mounted on the shaft to rotate about the same, operator controlled, engageable and disengageable clutch means between said member and the driving element, said clutch means normally engaged to transmit all the motion of the driving element to said member, and yielding clutch means between said member and the shaft comprising cams mounted on the shaft and having complemental spiral faces on their opposing ends, one of said cams being rotatable with said member and the other being rotatable with the shaft and shiftable axially thereof and a spring for resisting the axial shifting of said member, said cams being located on the shaft between the hub of said member and the driving element.

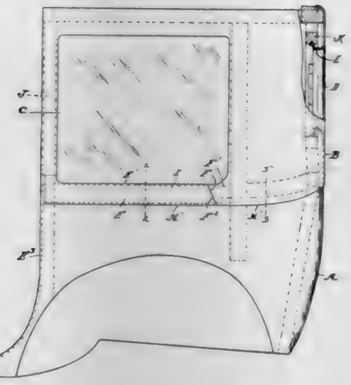
1,559,528. CENTRIFUGAL SCREEN. HANS STUB, Oslo, Norway. Filed June 26, 1925. Serial No. 39,807. 5 Claims. (Cl. 92—34.)



1. The combination with a centrifugal screen comprising a horizontally arranged screening cylinder, rotating blades within said cylinder, and an axial supply, of a rotating disc spaced from said cylinder at the supply end thereof, pump blades at the supply side of said disc, a housing enclosing said disc, the outer end of said housing being adapted to receive the material to be screened and the inner end of said housing abutting the supply end of said screen.

---

1,559,529. VEHICLE BODY. FRANK D. SUYDAM, Jr., Toledo, Ohio. Filed Mar. 25, 1922. Serial No. 546,626. 8 Claims. (Cl. 296—28.)

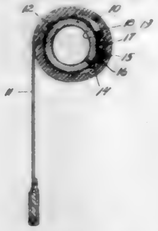


8. In a vehicle body, upper and lower sheet metal sections directly rigidly connected, the upper section being outwardly offset from the lower, the lower margin of the upper section being inturned to engage an upper marginal portion of the lower section forming a shoulder, and the lower section having a portion extended above said shoulder, said portion being outwardly offset to form a shoulder registering with that of the upper section.

---

1,559,530. SHADE-ROLLER ATTACHMENT. EUGENE N. YEHLE, Maryville, Mo. Filed Nov. 24, 1924. Serial No. 751,808. 2 Claims. (Cl. 156—25.)

1. A device for attaching shades to rollers, comprising a sleeve adapted to be removably fitted to the roller and formed with a longitudinal outwardly projecting portion, and a shade-attaching member provided with a



clamp element for detachable engagement with said longitudinal portion.

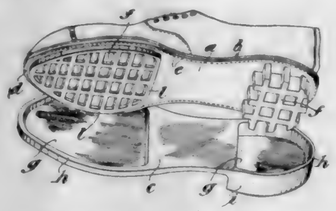
---

1,559,531. DEVICE FOR CLAMPING SHADES TO ROLLERS. EUGENE N. YEHLE, Maryville, Mo. Filed May 4, 1925. Serial No. 27,761. 2 Claims. (Cl. 156—25.)

1. A device for attaching window shades to rollers, comprising a split tubular sleeve of spring sheet metal adapted for removable clamping engagement with the roller, one of the longitudinal edges of said sleeve being rolled into clamping and retaining engagement with one of the end edges of the shade.

---

1,559,532. COMBINED SOLE AND HEEL FOR FOOTWEAR. GEORGE SMITH, Islington, London, England. Filed Mar. 10, 1925. Serial No. 14,494. 1 Claim. (Cl. 36—28.)



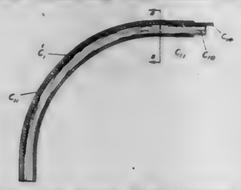
In a boot or shoe, the combination with the insole and the welt, of a sole unit including a full length outer wear section having separate ball and heel recesses, an intermediate section adapted to lie next to the insole and the welt and secured to the latter at its edges, said intermediate section having spaced ball and heel cushion elements carried by the bottom face thereof and adapted to fit in said recesses of the outer wear section, and means for connecting the outer wear section and the intermediate section carried by the welt.

---

1,559,533. METHOD OF CONSTRUCTING SHEATHED FILLER MEMBERS. LYNN EVANS, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Feb. 29, 1924. Serial No. 696,003. 8 Claims. (Cl. 153—1.)

1. The method of constructing composite members, which method consists of introducing within a longitudinally continuous but peripherally incomplete unitary sheet metal sheath, a laminated filler block including a

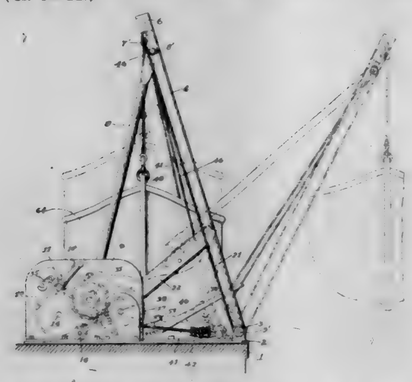
bridge strip made of material differing from that in the remainder of said laminated block and adapted to cover and conceal said remaining laminations within said in-



complete sheath, said sheath being disposed to grip and hold together all the filler laminations without need of supplementary securing means.

---

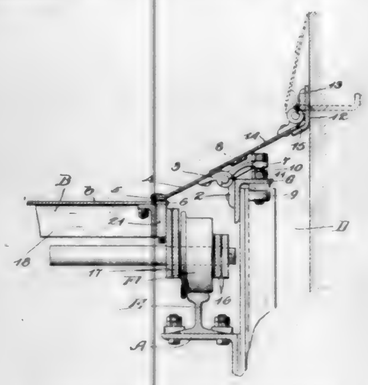
1,559,534. ONE-MAN BOAT-LAUNCHING APPARATUS FOR SHIPS. CHARLES B. OSBON, Somerville, Mass. Filed Mar. 13, 1925. Serial No. 15,176. 6 Claims. (Cl. 9—22.)



6. In a device for launching life-boats on a ship, a fall for lowering the boat over the side, a drum on which said fall is wound, means for rotating said drum, a brake band on said drum, a bell-crank attached to said band, a rod secured to said bell-crank having a screw thread cut thereon, a nut engaging said screw threaded rod, a hand wheel secured to said nut, a pair of cylindrical bushings, one on each side of said hand wheel, bearings for said bushings and in line with said bell-crank, stops for preventing said bushings from passing through said bearings, whereby by turning said wheel in opposite directions said band may be tightened or loosened.

---

1,559,535. ENDLESS-TRAVELING WATER SCREEN. GUSTAV R. RODDY and REGINALD J. HICKMAN, Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 23, 1923. Serial No. 634,002. 15 Claims. (Cl. 210—175.)



3. In a liquid screening apparatus comprising a frame adapted to be immersed in the liquid to be screened and an endless moving screen mounted therein, a cut off for separating the unscreened body of liquid from the screened body thereof lapping a side edge of the moving screen, and means for adjusting the cut off relative to the screen.

## Changes in Classification.

Order No. 2,933, of October 14, 1925, provides for the transfer of the following subclass in class 250, Radiant Energy, from Division 51 to Division 16.

41 **Condensers.**

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,502,028, F. R. Fuguay, Dispensing apparatus, decided September 22, 1925, claims 1, 2, and 3.

Pat. 1,515,196, P. H. Gaskins, Lubricating device, decided September 14, 1925, claims 1 to 7, inclusive.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 106,283, Leather and canvas boots and shoes, Ashuelot Shoe Company, Keene, N. H. Registered October 19, 1915. Decided September 22, 1925.

T. M. 193,079, Shoes made with canvas tops and rubber soles, Converse Rubber Shoe Co., Malden, Mass. Registered December 16, 1924. Decided September 22, 1925.

## NOTICE TO ATTORNEYS.

**A circular letter reading as follows has been placed in the mail addressed to each attorney on the roster:**

**"Your name appears on the roster of those registered to practice before the United States Patent Office. We are preparing to revise the roster to eliminate the names of those who are dead or who have retired from practice before this Office.**

**"You are reminded that the rules provide that attorneys registered in this Office should keep the Office advised of any change of address. To this end will you please fill out the form below and return this letter immediately.**

**"Your failure to fill out and return this letter will be considered your authorization to remove your name from the roster."**

**Attorneys who have not received this circular and who wish their names to be retained on the roster should immediately write the Commissioner of Patents to that effect and give him their full names and business addresses, together with their registration numbers and the names of any firms of which they are members or with which they are associated.**

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

### Ex parte Dietsch.

*Decided September 16, 1924.*

CLAIMS—PERMISSIBLE LANGUAGE OF—"NONCIRCULAR."

A limitation such as "noncircular" or "other than circular," having reference to the shank of a collar button, should be accepted as properly defining the element.

Application for patent.

ON PETITION.

BOW TIE.

*Mr. William Steell Jackson* for the applicant.

ROBERTSON, *Commissioner:*

Applicant petitions from the Examiner's ruling that the expression "cross section other than circular," having reference to the shank of a collar button, is objectionable as being negative.

The claim in question originally defined the shank as being "noncircular," which term the Examiner held to be objectionable, whereupon the words above quoted were substituted therefor.

It is a primary requisite that claims should be clear, so that their meaning may be understood without any question. It is true, as stated by the Examiner, that the invention should be defined by what it is and not by what it is not. In the present case, however, the term "cross section other than circular" does define what applicant has. It is a generic expression that distinctly states that the shank of the collar button may be any shape in cross section, within the light of the specification, except circular.

This case clearly distinguishes from *Ex parte Davis*, 14 Gour. 22–19, cited by the Examiner, In that case the claim for a garment did not include any element to support the statement "without a chance of the same sagging at any point." And it was held "that if the claim be amended to positively include the element which prevents sagging of the cloth at any point," the same would be allowed.

In the present case the shank is positively recited as an element, and no reason is apparent why a limitation such as noncircular or other than circular should not be accepted as properly defining the element.

The petition is granted.

### Ex parte Carr.

*Decided December 26, 1924.*

DESIGNS—DRAWINGS.

Where objection had been made to showing in side elevation in Fig. 2 a part of the article shown in front elevation in Fig. 1, on the ground that the patent might be conceived to cover not only the complete article, but the pertinent features shown in Fig. 2, applicant was permitted to retain both views upon amending his specification so as to describe Fig. 2 as a partial side elevation of the new design shown in Fig. 1.

ON PETITION.

DESIGN FOR ELECTRIC-LAMP STANDS.

*Messrs. Popp & Powers* for the petitioner.

ROBERTSON, *Commissioner:*

Applicant petitions from the Examiner's requirement for further illustration.

The Examiner has objected to the showing of Fig. 2, which is designated as a partial side elevation, on the ground that the showing would confuse the public, since one might readily conceive that the patent covered not only the complete article, but the pertinent features shown in Fig. 2.

In his statement he says that it does not appear that applicant is seeking to claim or cover two different articles; but if the drawing is accepted as now presented the door would be laid open for others to take advantage by laying the foundation for a claim covering more than a single article.

It is apparent from the drawing that if Fig. 2 was amended to show the complete stand, the upper and lower portion thereof would appear in that figure just as in Fig. 1. Under those circumstances no objection is seen to the drawing as presented.

In order to avoid any question as to whether applicant is intending to cover more than one design, the last paragraph of the specification should be amended by inserting after the word "elevation" in line 1 thereof, the words *showing my new design*, and substituting for those words in the last line the word *thereof*, so that this paragraph will read:

Figure 1 is a front elevation showing my new design, and Figure 2 is a partial side elevation thereof.

If this amendment is presented within 20 days from the date hereof, the Examiner is directed to pass the case to issue, if otherwise allowable.

The petition is granted to the extent indicated.

### Ex parte Remington Arms Company, Inc.

*Decided December 26, 1924.*

POWER OF ATTORNEY BY ASSIGNEE—ASSIGNMENT NOT RECORDED.

A power of attorney filed by an assignee will not be accepted where the alleged assignment is not placed of record in the assignment records, but is merely filed in the application.

IN THE MATTER of the petition of the Remington Arms Company, Inc., that the power of attorney heretofore given by it to A. A. Dicke and H. C. Dieserud in the application of Walter E. Lippert, Serial No. 689,760, be accepted.

*Mr. A. A. Dicke* for Lippert.

## Changes in Classification.

Order No. 2,933, of October 14, 1925, provides for the transfer of the following subclass in class 250, Radiant Energy, from Division 51 to Division 16.

41 Condensers.

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,502,028, F. R. Fuguay, Dispensing apparatus, decided September 22, 1925, claims 1, 2, and 3.

Pat. 1,515,196, P. H. Gaskins, Lubricating device, decided September 14, 1925, claims 1 to 7, inclusive.

Final decisions in interferences have been rendered against the following registered trade-marks:

T. M. 106,283, Leather and canvas boots and shoes, Ashuelot Shoe Company, Keene, N. H. Registered October 19, 1915. Decided September 22, 1925.

T. M. 193,079, Shoes made with canvas tops and rubber soles, Converse Rubber Shoe Co., Malden, Mass. Registered December 16, 1924. Decided September 22, 1925.

## NOTICE TO ATTORNEYS.

A circular letter reading as follows has been placed in the mail addressed to each attorney on the roster:

"Your name appears on the roster of those registered to practice before the United States Patent Office. We are preparing to revise the roster to eliminate the names of those who are dead or who have retired from practice before this Office.

"You are reminded that the rules provide that attorneys registered in this Office should keep the Office advised of any change of address. To this end will you please fill out the form below and return this letter immediately.

"Your failure to fill out and return this letter will be considered your authorization to remove your name from the roster."

Attorneys who have not received this circular and who wish their names to be retained on the roster should immediately write the Commissioner of Patents to that effect and give him their full names and business addresses, together with their registration numbers and the names of any firms of which they are members or with which they are associated.

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

EX PARTE DIETSCH.

*Decided September 16, 1924.*

CLAIMS—PERMISSIBLE LANGUAGE OF—"NONCIRCULAR."

A limitation such as "noncircular" or "other than circular," having reference to the shank of a collar button, should be accepted as properly defining the element.

Application for patent.

ON PETITION.

BOW TIE.

*Mr. William Steell Jackson* for the applicant.

ROBERTSON, *Commissioner:*

Applicant petitions from the Examiner's ruling that the expression "cross section other than circular," having reference to the shank of a collar button, is objectionable as being negative.

The claim in question originally defined the shank as being "noncircular," which term the Examiner held to be objectionable, whereupon the words above quoted were substituted therefor.

It is a primary requisite that claims should be clear, so that their meaning may be understood without any question. It is true, as stated by the Examiner, that the invention should be defined by what it is and not by what it is not. In the present case, however, the term "cross section other than circular" does define what applicant has. It is a generic expression that distinctly states that the shank of the collar button may be any shape in cross section, within the light of the specification, except circular.

This case clearly distinguishes from *Ex parte Davis*, 14 Gour. 22–19, cited by the Examiner, In that case the claim for a garment did not include any element to support the statement "without a chance of the same sagging at any point." And it was held "that if the claim be amended to positively include the element which prevents sagging of the cloth at any point," the same would be allowed.

In the present case the shank is positively recited as an element, and no reason is apparent why a limitation such as noncircular or other than circular should not be accepted as properly defining the element.

The petition is granted.

EX PARTE CARR.

*Decided December 26, 1924.*

DESIGNS—DRAWINGS.

Where objection had been made to showing in side elevation in Fig. 2 a part of the article shown in front elevation in Fig. 1, on the ground that the patent might be conceived to cover not only the complete article, but the pertinent features shown in Fig. 2, applicant was permitted to retain both views upon amending his specification so as to describe Fig. 2 as a partial side elevation of the new design shown in Fig. 1.

ON PETITION.

DESIGN FOR ELECTRIC-LAMP STANDS.

*Messrs. Popp & Powers* for the petitioner.

ROBERTSON, *Commissioner:*

Applicant petitions from the Examiner's requirement for further illustration.

The Examiner has objected to the showing of Fig. 2, which is designated as a partial side elevation, on the ground that the showing would confuse the public, since one might readily conceive that the patent covered not only the complete article, but the pertinent features shown in Fig. 2.

In his statement he says that it does not appear that applicant is seeking to claim or cover two different articles; but if the drawing is accepted as now presented the door would be laid open for others to take advantage by laying the foundation for a claim covering more than a single article.

It is apparent from the drawing that if Fig. 2 was amended to show the complete stand, the upper and lower portion thereof would appear in that figure just as in Fig. 1. Under those circumstances no objection is seen to the drawing as presented.

In order to avoid any question as to whether applicant is intending to cover more than one design, the last paragraph of the specification should be amended by inserting after the word "elevation" in line 1 thereof, the words *showing my new design*, and substituting for those words in the last line the word *thereof*, so that this paragraph will read:

Figure 1 is a front elevation showing my new design, and Figure 2 is a partial side elevation thereof.

If this amendment is presented within 20 days from the date hereof, the Examiner is directed to pass the case to issue, if otherwise allowable.

The petition is granted to the extent indicated.

EX PARTE REMINGTON ARMS COMPANY, INC.

*Decided December 26, 1924.*

POWER OF ATTORNEY BY ASSIGNEE—ASSIGNMENT NOT RECORDED.

A power of attorney filed by an assignee will not be accepted where the alleged assignment is not placed of record in the assignment records, but is merely filed in the application.

IN THE MATTER of the petition of the Remington Arms Company, Inc., that the power of attorney heretofore given by it to A. A. Dicke and H. C. Dieserud in the application of Walter E. Lippert, Serial No. 689,760, be accepted.

*Mr. A. A. Dicke* for Lippert.

ROBERTSON, *Commissioner:*

The Remington Arms Company, Inc., petitions that the power of attorney heretofore given by it to A. A. Dicke and H. C. Dieserud be accepted.

It appears that in a number of applications, of which this is one, the Remington Arms Company, Inc., have filed to be entered in the application files, but not recorded, assignments to it of the inventions, identifying the application by the title and the date of execution.

When these powers of attorney were filed the petitioner was notified by the Docket Clerk that they could not be accepted until the assignments were recorded in the assignment records. In response to a protest against this action I held, in a letter dated December 3, 1924, that acceptance of these powers was properly refused.

In that letter it was stated that the rules of this Office, which provide that an assignee of the entire interest may be recognized in the prosecution of an application, can be considered to refer only to an assignee whose assignment has been recorded, it being pointed out that alleged transfers of title very often raise questions as to whether they do, in fact, convey the entire title, which questions should be passed upon in the first instance by the Assignment Division.

In the present petition attention is called to the difference in the wording of rules 5 and 20, which provide for the recognition of the assignee of an entire interest in the prosecution, and rules 26 and 185, which relate to the issuance of patents and to the effect of a recorded assignment, it being noted that rules 5 and 20 do not state that the assignment must be placed of record, whereas the other two rules do.

Rules 26 and 185 follow the language of sections 4895 and 4898 of the Revised Statutes, and, strictly speaking, the latter is not a rule of this Office, but merely a statement of what the statute provides.

There is nothing in the statutes which specifies what evidence the Commissioner may accept as to an assignment having been actually made, the only reference therein to assignments, which affects this Office, including a provision that the assignment must first be entered of record. The Commissioner clearly has the authority to provide under what conditions the assignee will be recognized.

If the assignment filed in the application is regarded as sufficient authority for recognizing a power of attorney given by the assignee, the Office will have taken action by virtue of that assignment, and yet if an abstract of title should be ordered by either the inventor or the assignee this assignment will not be referred to therein, since it would not be in the assignment records. Clearly the Office should not consider the assignment at one time and ignore it at another.

While it is true that rules 5 and 20 do not specifically say that the assignment must be of record in order that the assignee may be recognized in the prosecution of the application, these rules have always been so construed. No decision is cited, and none has been found, in which a power of attorney has been accepted where the alleged assignment is not placed of record in the assignment records, but merely filed in the application. For the reasons pointed out in my letter of December 3, 1924, and also because the statutes have provided for recording of assignments, it is believed proper to refuse to accept the power of attorney where the only evidence of the right of the one giving the power is shown by an assignment not recorded in the assignment records, but merely placed in the application.

Of course, this Office cannot compel any assignee to record his assignment, but it is deemed to be within its authority to refuse to accept a power of attorney given by him unless such assignment is recorded in the assignment records.

It is to be noted that the present petition raises what is a moot question unless and until the inventor should attempt to revoke the power of attorney originally given. When this application was filed a power of attorney was given to A. A. Dicke. This power has not been revoked, and under it A. A. Dicke is recognized as the attorney, and his appointment by the alleged assignee is in effect merely a confirmation of the original appointment. The proposed power also appoints H. C. Dieserud as attorney; but under the rules of this Office, Dicke can appoint Dieserud as his associate.

Dicke being thus recognized as the attorney to prosecute the application and having the right to appoint Dieserud as his associate, the petitioner, the Remington Arms Company, Inc., is in no way deprived of any right by the refusal to accept the present power until the assignment is placed on record in the assignment records.

The petition is denied.

IN RE SUPERIOR BRASS SECURITIES CO.

*Decided December 26, 1924.*

LICENSES—ACCESS TO APPLICATION.

While an assignee of an entire application is entitled to control the prosecution thereof and the assignee of a part interest is entitled to inspect the application, it is not the general practice of the Office to grant to a mere licensee access to an application.

IN THE MATTER of the Superior Brass Securities Co. for leave to examine the application of T.

*Mr. Herman Roth* for Superior Brass Securities Co.

*Messrs. Fraser, Myers & Manley* for T.

ROBERTSON, *Commissioner:*

The Superior Brass Securities Co. request permission to examine the application of T. This request is based upon a contract said to have been entered into between the parties on November 14, 1923.

It is alleged that by this contract the inventor gave to the petitioner an exclusive license to manufacture and sell the oil burner disclosed in the application, that the company paid to the inventor a large sum of money, that the burner was found to be inefficient, and that it is important for the petitioner to be allowed to examine this application, since if the application be not allowed and there be no possibility of a patent being issued thereon, the petitioner would not undertake to further finance the business of manufacturing and selling of said burner.

The petition is vigorously opposed by the applicant, and affidavits have been filed by the applicant, and further affidavits filed by the petitioner.

So far as these affidavits show there is a sharp conflict between the parties to what has taken place and as to whose fault it is that no further progress has been made in the exploitation of the burner.

Obviously this Office cannot undertake to settle disputed questions of facts between the parties to the contract. So far as the alleged breaches of contract are concerned the parties must be left to their proper remedy in a court of competent jurisdiction.

While an assignee of an entire application is entitled to control the prosecution thereof and the assignee of a part interest is entitled to inspect the application, it is not the general practice of the Office to grant to a mere licensee access of an application, and this for the reason that the licensee owns no interest in the patent. No admitted facts are shown here which would justify a departure from that rule. It may be that if a suit is brought by one of the parties against the other the court in determining their respective rights may deem a copy of the application necessary. If a certificate to that effect were filed, the petitioner would be allowed to obtain a copy of the application.

Request is made for an oral hearing; but it is not the general practice to set petitions of this kind for hearing, and no reason is seen for making an exception in this case.

The petition is denied.

1. INTERFERENCE—ISSUE—COUNTS NOT PATENTABLY DISTINCT FROM EACH OTHER—SUGGESTION BY EXAMINER OF INTERFERENCES—DUTY OF PRIMARY EXAMINER.

Where the Examiner of Interferences awards priority to C. on five counts and to P. on one count, suggesting that the latter might not be patentable to P. over the others, the question of its patentability over the other counts should be carefully considered by the Primary Examiner after the termination of the interference.

2. SAME—SUPERINTENDENT OF FACTORY AND FOREMAN—BURDEN OF PROOF—ORIGINALITY.

Where P. was the foreman in charge of certain work in the factory of which C. was superintendent, *Held* that the burden of proof rested on him, not only because of his position as junior party, but because of this relation, and it was incumbent upon him to show, not only that he had a conception of the invention, but that this invention was not embodied in the instructions which he was admittedly given by C.

3. SAME—EMPLOYER AND EMPLOYEE—DISCLOSURE BY EMPLOYER TO EMPLOYEE.

Where the employer discloses to the employee the general plan of invention, any details which may be worked out by the employee which do not in themselves amount to an independent invention are deemed to be the invention of the employer.

4. SAME—SAME—SUPERINTENDENT OF FACTORY AND FOREMAN THEREIN.

The superintendent of a factory and a foreman therein stand in the legal relation of employer and employee.

5. SAME—SAME—SAME.

It is to be expected that the actual instructions to the workmen would, in the ordinary procedure of work, be given by the foreman rather than by the superintendent.

6. SAME—TESTIMONY—UNCANDID ANSWERS—QUESTIONABLE CONDUCT.

The whole testimony of a party to an interference is discredited by his conduct in obtaining prints of his opponent's application drawing from the stenographer of the attorney for the latter, and his disingenuous answer to a question as to whether he had obtained these prints and a photograph of the machine, as testified to by the stenographer.

Patent interference No. 44,719.

APPEAL from Examiners in Chief.

SPRING-FORMING MACHINE.

Application of Edward Parradee filed March 8, 1920, No. 364,289.

Application of Albert P. Crell filed April 24, 1919, No. 292,370.

*Mr. Ithiel J. Cilley* for Parradee.

*Mr. Cyrus W. Rice* for Crell.

KINNAN, *First Assistant Commissioner:*

The party Parradee appeals from the decision of the Examiners in Chief affirming the decision of the Examiner of Interferences awarding priority of invention to Crell, the senior party, upon counts 1 to 5, inclusive.

The invention relates to a machine for forming and tempering leaf springs, and its construction is apparent from the counts, of which counts 1 and 4 are illustrative:

1. In a structure of the character described, a vessel adapted to contain a cooling liquid, a conveyer movable in the vessel and carrying co-operating interrelatively movable clamp members adapted to clamp the work between them, an arm swingably carried by the conveyor and adapted to interrelatively move said members into and out of clamping position, a guide for the arm mounted extraneously of the conveyor and adapted to swing the arm to interrelatively move said members as aforesaid.

4. In a structure of the character described, a vessel adapted to contain a cooling liquid, a continuous flexible conveyor, a driven rotatable element, carrying the conveyor, a plurality of co-operating interrelatively movable pairs of clamp members carried in spaced relation by the conveyor, each pair being adapted to clamp the work between them, arms swingingly carried by the conveyor and adapted to interrelatively move the respective pairs of said members into and out of clamping position, a guide for the arms mounted extraneously of the conveyor and adapted to swing the arms to interrelatively move said members as aforesaid, a guide for a portion of the travel of the conveyor mounted extraneously thereof and adjacent said guide for the arms.

The interference as originally declared contained six counts. The Examiner of Interferences awarded priority to Parradee as to count 6 on the ground that it included a limitation which was not disclosed in Crell's application. He suggested that this count might not be patentable over the others, but stated this was a question for the Primary Examiner to determine after the final decision in the interference.

[1] As no appeal was taken by Crell, the decision on priority with respect to that question has become final; but the question of its patentability over the other counts should be carefully considered by the Primary Examiner after the termination of the interference.

[2, 3] The party Parradee is not only the junior party, but the record shows that he was the foreman in charge of certain work in the factory of which Crell was superintendent. The burden of proof, therefore, rests upon him, not only because of his position as junior party, but because of this relation. It is incumbent upon him to show, not only that he had a conception of the invention, but that this invention was not embodied in the instructions which he was admittedly given by Crell. In other words, it is well settled law that where the employer discloses to the employee the general plan of invention any details which may be worked out by the employee which do not in themselves amount to an independent invention, are deemed to be the invention of the employer. *Agawam Co.* v. *Jordan*, 7 Wall. 583.

[4] That the superintendent of a factory and a foreman therein stand in the legal relation of employer and employee is well settled. *Braunstein* v. *Holmes*, 1908 C. D. 341; 133 O. G. 1937; 30 App. D. C. 328.

[5] Admittedly the actual work in building the machine, which was built at the factory of the New Era Spring and Specialty Company, at Grand Rapids, Mich., was done by Parradee or under his directions. The actual instructions to the workmen would in the ordinary procedure of work have been given by the foreman rather than by the superintendent. This was to be expected. The testimony of Crell and of Daniels, the latter being president of the company, and of Miss Holmes shows that Crell prior to November, 1917, actually had a general conception of the invention in issue and disclosed it to Parradee. Even if Parradee came to work for the New Era Spring and Specialty Company in the latter part of October, 1917, rather than on January 1, 1918, as testified by Crell, is immaterial, for there is absolutely nothing to show that Parradee had any idea of a machine of this type or had made any suggestion with relation thereto prior to the time he had entered the employ of the New Era Spring and Specialty Company or prior to the time that Crell directed the building of the machine.

[6] Furthermore, Parradee's whole testimony is discredited by his conduct in obtaining prints of Crell's application drawing from the stenographer of Crell's attorney and the quibble, in his testimony in relation to this, in answer to a question as to whether he had obtained these prints and a photograph of the machine as testified to by the stenographer. He denied that he had done so; but it appears from his later testimony that this denial was based on the ground that the question asked was whether he had been at the attorney's office and obtained these prints on or about the 25th of February, whereas he contended that the date he was at the office was a week later, although he admitted afterwards he was wrong even about that and that he was there on the date that the stenographer had stated.

The testimony has been reviewed fully by the lower tribunal, and no error is found in the holding that Crell had a conception of the invention prior to Parradee's connection with the building of the machine and that he had disclosed to Parradee, who as foreman occupied with respect to Crell the technical relation of employee, the general plan of the machine, and that whatever Parradee did with respect thereto was within the general plan disclosed to him.

It is to be noted in this connection that in interference No. 44,716, which involved another detail of this machine and which also included another party, no appeal was taken by Parradee from the decision of the Examiner of Interferences awarding priority to Crell.

The decision of the Examiners in Chief is affirmed.

Application for patent.

APPEAL from the Examiners in Chief.

PROJECTILES FOR USE WITH DEPTH-CHARGE PROJECTILES.

Application filed April 3, 1919, Serial No. 287,103.

*Messrs. Brown, Boettcher & Dienner* for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief, denying patentability to claims 1 and 4, which are as follows:

1. A projectile for depth charge projectors comprising an arbor adapted to project into the barrel of the piece and to form a piston in said barrel, a saddle carried by said arbor, a container containing a main charge of high explosive and a detonator, and adjustable means for detachably attaching said container to said saddle.

4. A projectile for depth charge projectors, comprising an arbor adapted to project into the barrel of the piece and to form a piston in said barrel, and an elongated container containing high explosive symmetrically attached to the end of said arbor with its axis normal to the axis of said arbor to form a T-shaped assembly.

The references are: Thornycroft, No. 1,340,689, May 18, 1920; Wieser, No. 932,214, August 24, 1909; Machenbach, No. 1,094,340, April 21, 1914; Mills, No. 1,295,050, February 18, 1919.

The Examiners in Chief affirmed the Primary Examiner as to the grounds of rejection of claim 1, but found the Examiner's ground of rejection of claim 4 not sustainable and recommended such claim be denied patentability for other reasons.

[1] The claims relate to a projectile for depth-charge projectors of the type used during the recent war against submarine war vessels. Claim 1 is admitted by applicant to be fully met by Thornycroft as to every feature save that the means for attaching the container to the saddle is not adjustable. As fully set forth by the Examiners in Chief, it is so well understood by mechanics generally that a device, such as a carrier or holder, may be made adjustable to accommodate slightly different sized articles that there is no room for inventive concept in such a change in the Thornycroft construction. It is clear enough this claim is wanting in merit.

[2] Appellant has contended that the Thornycroft patent, though applied for before appellant filed his application, but granted after appellant's filing date, is not properly cited as a reference. It must be held this contention can not be maintained. The patent clearly discloses the fact that the patentee was, before appellant made his invention, in possession of a knowledge of the same construction devised by appellant, save for the adjustability of the attaching means. It is admitted by appellant that a claim like appealed claim 1, with the feature of adjustability eliminated, would not be patentable over Thornycroft, but that the addition of this feature of adjustability to Thornycroft's construction renders a claim including this feature patentable, because the Thornycroft construction can not be used as a basis for the rejection of a claim which defines any construction different therefrom. It is thought to be correct practice to hold that the Thornycroft patent is a good reference back to its filing date of December 9, 1918, for everything that is fully and completely disclosed, and that a claim to be patentable thereover must define something involving invention in addition to what Thornycroft has already patented, notwithstanding such patent issued after applicant filed his application. *Beitman* v. *Strater*, 262 Fed. 443; *Sundh Electric Co.* v. *Interborough Rapid Transit Co.*, 198 Fed. 94; *Millett and Reed* v. *Duell, Commissioner of Patents*, 96 O. G. 1241; 1901 C. D. 410; 18 App. D. C. 186; *Farmers' Handy Wagon Co.* v. *Beaver Silo & Box Mfg. Co.*, 236 Fed. 731; and *Lemley* v. *Dobson-Evans Co.*, 246 O. G. 1203; 1918 C. D. 223; 243 Fed. 391, C. C. of A., 6th Cir.

[3] Claim 4 was denied patentability by the Examiner upon the Thornycroft reference; but the Examiners in Chief sustained applicant's contention that he was entitled, as to this claim, to the filing date of his application No. 192,130, filed September 19, 1917, now Patent No. 1,311,780, for constructive reduction to practice, and since such date was earlier than Thornycroft's filing date the latter's patent was not a reference. The Examiners in Chief, however, recommended the denial of patentability to this claim on the ground that to issue a patent containing this claim would prolong the monopoly granted applicant in his previously-issued patent. It is noted this prior patent of applicant's contains claims to the combination of a gun with a projectile of the same character as defined by this claim 4. Obviously when appellant's patent expires the public should be permitted to use the only embodiment of the invention recited in five claims of the patent which the patent discloses. The use of such a construction as illustrated and claimed in the patent would infringe the present claim 4. It is believed the statute does not contemplate such a prolonging of the monopoly and that the conclusions of the Examiners in Chief that appellant is estopped to claim in his present application the precise projectile claimed in his patent, in combination with the only means for projecting it, the gun, are sound.

The Examiners in Chief also found this claim 4 unpatentable over the construction disclosed in the patent to Wieser. The only difference recited in the appealed claims resides in the shape of the container. While recognizing the advantages of this particular shape of container when used with other features which appellant disclosed, yet it is believed the claim, which recites none of these other features, but only a construction differing in shape from that of Wieser, does not define anything involving invention.

The decision of the Examiners in chief is affirmed.

ON PETITION.

LOCOMOTIVE OR TRAVELING MACHINES.

*Felix F. von Wilmowsky* pro se.

KINNAN, *First Assistant Commissioner:*

This petition requests that the Commissioner order a reexamination of this application, particularly of the claims filed Dec. 27, 1921, and including the amendment filed Feb. 15, 1923, which has been denied admission by the Examiner.

The application was, on May 17, 1923, held abandoned by the Examiner on the ground that the amendment filed February 15, 1923, was in no way a complete and proper response to the final action of February 15, 1922.

No further amendment has been filed to meet the objections of the Examiner to the amendment filed Feb. 15, 1923, expressed in the letter of May 17, 1923.

The record shows that on Dec. 27, 1920, the Examiner required that the entire specification and claims be revised. Claims 1 to 27 and 29 were said to be vague, indefinite, and functional, and claims 47, 48, and 49 were pronounced unintelligible. The drawing was objected to as "blind and unintelligible," not showing many of the operating parts, while other parts "are on such a small scale and so jumbled together as to be of little use to an intelligent understanding." The applicant was told "in view of the incomplete understanding of the case any intelligent action is impossible," and that "further action must await * * * a complete revision."

An amendment was filed December 27, 1921, by which a number of minor changes were made in the specification. Claims 1 to 21 and 47, 48, and 49, were canceled and 22 new claims substituted. "Remarks" were appended in which further revision of the specification was *promised*, one reference of record was discussed, and revision of the drawing was promised in connection with the future filing of divisional applications to comply with a previous Office requirement for division.

It seems worthy of note, here, that an inspection of the substitute claims shows almost all of them to be a full page or more in length.

This amendment was answered by the Examiner on February 15, 1922, by again requiring revision of the entire specification and claims, repeating previous requirements, as to the use of reference characters, and repeating previous objections to certain figures of the drawings. New drawings were said to be essential. The claims were said to be "so confused, indefinite, and functionally expressed as to be unintelligible beyond a very general idea of what the applicant desires to do." *The action was made final.*

On February 15, 1923, just a year from this final action, an amendment was presented substituting new pages of description for pages 1 to 16 of the specification and making a large number of what appear to be minor changes in the new claims submitted December 27, 1921. Under "Remarks" in this amendment, a further amendment of the specification and claims with amended drawings was promised "as soon as the same will be ready."

On May 17, 1923, the Examiner held this amendment to be in no way a complete and proper response to the final action of February 15, 1922, refused to enter the amendment, and pronounced the case abandoned.

The instant petition was filed May 16, 1924, a year from the last action, lacking one day.

[1] The record of this case very clearly shows a lack of progress in prosecution. It was filed August 7, 1919, and after nearly five years in the Office no material advancement has been made. The applicant has in each instance taken the full year in responding to Office actions. Under these conditions he is in no position to request leniency where the question of abandonment is raised by failure to file a responsive amendment.

[2] The petition in part contends that the final action given February 15, 1922, was premature, as it was the first action given on the new claims filed December 27, 1921; but the action then made final but was a repetition substantially of the previous Office action. It was, in effect, a requirement that the disclosure and claims be made to comply with the requirements of section 4888, Revised Statutes, and to make the action final was all the Examiner could do if he regarded his requirement as essential and not met by the previous amendment.

[3] The applicant did not contest the propriety of the final action within the year therefrom, but at the end of that year presented an amendment which he admitted was incomplete by saying a further amendment to the specification and claims would be presented with amended drawings "as soon as the same will be ready."

Under these circumstances it can not but be held that the final action of February 15, 1922, was proper and the holding of abandonment under date of May 17, 1923, was correct.

The petition is accordingly denied.

## CAMPBELL *v.* BLEST.

*Decided July 11, 1924.*

INTERFERENCE—REDUCTION TO PRACTICE.

Where there is no testimony that tests were made under working conditions, and the witness states that the mechanism operated successfully except that certain details were wrong, but it does not appear what those details were or what further tests were made, *Held* that the testimony is not sufficient to establish that there was a reduction to practice of the invention.

Patent interference No. 46,966.

APPEAL from Examiners in Chief.

DOOR OPERATING MECHANISM.

Application of Argyle Campbell filed December 5, 1921. No. 519,827.

Patent granted to Minot C. Blest September 13, 1921, No. 1,590,333, on an application Filed May 10, 1921, No. 468,300.

*Mr. George I. Haight* for Campbell.

*Mr. George C. Lambe* for Blest.

KINNAN, *First Assistant Commissioner:*

This is an appeal by Campbell from the decision of the Examiners in Chief reversing the decision of the Examiner of Interferences and awarding priority to Blest, the senior party, upon an issue which is stated in three counts reading as follows:

1. In a dump car, a sill, a discharge door operating shaft behind said sill and an operating lever mounted on said shaft having a socket portion depending below said sill, said socket portion being movable beyond the outside vertical lines of said sill.

2. In a dump car, a sill, a bodily movable discharge door operating shaft behind said sill, and an operating lever mounted on said shaft and being movable therewith, the end portion of said lever being movable to a position beyond the outside vertical lines of said sill.

3. In a dump car, a sill, a bodily movable and rotatable shaft behind said sill, and an operating lever mounted on said shaft and being movable therewith, said lever having a socket portion depending below said sill and movable to a position beyond the outside vertical lines of said sill.

The counts of the issue correspond to three claims of the Blest patent, which was granted prior to the filing of Campbell's application. The burden is therefore upon Campbell to establish his case beyond a reasonable doubt.

The invention relates to railway dump cars and particularly to the door-operating mechanism therefor.

Both of the parties show a bodily movable and rotatable shaft located behind a side sill of the car. This shaft is referred to in the record as a "creeping" shaft and is of the type shown in the patent to Lindstrom and Streib, No. 791,348, which is owned by the Pressed Steel Car Company, the assignee of Blest. The mechanism for rotating the shaft shown by both parties is similar to that shown in the patent to Campbell, No. 1,284,056.

Count 1 is broad enough to include both the creeping shaft and a shaft that is not bodily movable, while counts 2 and 3 specify a bodily-movable shaft. All the counts specify that the socket portion of the operating lever is movable to a position beyond the outside vertical lines of the sill. The record of the application upon which the Blest patent was granted shows that broader claims, which did not include this limitation, were rejected on the Campbell patent, above cited, and were canceled. In view of this limitation in the claims it is necessary for Campbell to establish either, as he claims, a disclosure to Blest of the specific invention, or a prior conception and reduction to practice, or a prior conception followed by due diligence in reducing the invention to practice.

Blest took no testimony and is therefore confined for his date of conception and reduction to practice to May 10, 1921, the date on which his application was filed. Campbell's application was filed December 5, 1921.

The Examiner of Interferences found that Campbell had established a disclosure of the invention in issue to the Pressed Steel Car Company, Blest's assignee, and in the absence of any denial on the part of Blest that such a disclosure was communicated to him Campbell was entitled to the award of priority under the ruling in *Winslow v. Austin*, 86 O. G. 2171; 1899 C. D. 301; 14 App. D. C. 137. The decision of the Examiner of Interferences is based largely on the ground that the difference between what is shown in Campbell's patent and in certain blue prints, which it is testified on behalf of Campbell were sent to the office of the Pressed Steel Car Company, and the invention in issue was a matter merely of degree and that the assumption is justified that that invention was disclosed. He also held that the testimony on the part of Campbell tended to show a reduction to practice of the invention disclosed in count 1 as early as January 14, 1921, which is prior to the date to which Blest is restricted.

The Examiners in Chief, on the other hand, found that there was no proof of a disclosure to the Pressed Steel Car Company or Blest of a construction in which the socket portion of the operating lever was movable beyond the outside vertical line of the sill. They also held that the testimony was not sufficient to establish a reduction to practice of the invention of count 1, as claimed by Campbell.

Undoubtedly Campbell sent to the Pressed Steel Car Company, several years prior to the dates of the filing of either application herein involved, certain blue prints and also stated that the operating lever shown in these blue prints could be used in connection with a "creeping" shaft. No one of these blue prints, however, discloses with any certainty a structure which is so arranged that the socket of the operating lever can be moved beyond the outside vertical line of the sill. The print No. 3,000 shows nothing more than what is shown in Campbell's Patent No. 1,284,056, and none of the other blue prints shows the parts arranged as specified in the issue.

It is stated in the brief on behalf of Campbell that a comparison of his Patent Office drawings with drawing No. 3,067, Campbell's Exhibit 9, shows that certain figures of the Patent Office drawings were prepared from this blue print. This may be true, but the drawing itself does not establish that the parts were intended to be arranged as specified in the issue, and there is no testimony that they were intended to be so arranged or that there was any disclosure to the Pressed Steel Car Company of such an arrangement. There is no denial of the fact that the drawings in evidence were sent to the Pressed Steel Car Company, but that does not establish a disclosure of the invention in issue to that company unless it is clear from these drawings that the operating socket was to be arranged as specified or that in some way this information was communicated to that company. A careful examination of these drawings and of the letters in evidence fails to disclose that such information was communicated to the Pressed Steel Car Company.

In so far as the claim for a reduction to practice of the invention specified in count 1 is con-

cerned, drawing 2,857°, Campbell's Exhibit 13, does not in and of itself show that the parts were to be arranged as specified. The operating lever having a socket is shown in that drawing, but it can not be determined therefrom alone that this lever was movable to such a position that the socket would be beyond the outside vertical line of the sill. Nobody testifies to this effect, some of the witnesses stating merely that certain cars were built in accordance with this blue print.

But even if it could be held that the invention of count 1 is disclosed in this blue print, the testimony is not sufficient to establish that it was a reduction to practice of the invention. There is no testimony that tests were made of these cars under working conditions, and the witness Zimmer states that the mechanism tested operated successfully except "that certain details were wrong" but it does not appear what these details were, nor does it appear what further tests were made of the car. There is no other evidence of any alleged reduction to practice prior to the filing date of Campbell's application, nor is there any evidence to show what was being done with the invention between the times that the cars were said to have been built and the filing of Campbell's application. Therefore if Campbell is to be held to have established a conception of the invention of count 1 prior to Blest's filing date he was not diligent in reducing the invention to practice.

It is to be noted in connection with the claim of Campbell to have disclosed the invention in issue to the Pressed Steel Car Company that between June, 1918, when he claims to have conceived the invention, and the filing of the application herein involved he filed 22 other applications, many of them relating to door-operating mechanism, but no one of which discloses the invention here claimed. If, as a matter of fact, he had the invention as now claimed in 1918, no reason is seen why he should have waited to file his application therefor until several months after the Blest patent had issued, and the filing of these applications without making any effort to protect the invention of count 1 tends strongly to negative any claim on Campbell's part that he was diligent in reducing the invention of count 1 to practice. The burden of proof beyond a reasonable doubt resting upon Campbell does not seen to me to have been discharged.

The decision of the Examiners in Chief is affirmed.

EX PARTE SANFORD.

*Decided August 6, 1924.*

1. DISCLAIMER BY PATENTEE—ACKNOWLEDGEMENT OF DISCLOSURE IN PRIOR PATENTS OF CERTAIN STRUCTURAL FEATURES.

A mere recital that an applicant or patentee knew the state of the art when he entered the field or took his patent neither adds to nor detracts from the force of the patent.

2. SAME—NOT SUFFICIENT UNLESS SOMETHING OF DESCRIPTION OR CLAIM IS ABANDONED.

Where in the proposed "disclaiming paragraph" nothing in the patent is abandoned either of description or claim, the paragraph is not a disclaimer under the statute.

ON PETITION.

RAILWAY CARS.

Patent granted March 11, 1924, No. 1,486,547, on an application filed August 31, 1923, Serial No. 660,416.

*Mr. Cyrus Kehr* for Sanford.

KINNAN, *First Assistant Commissioner:*

Petition is taken for the entry of the following "disclaiming paragraph" in the above identified patent:

I am aware that such limited structural channel end sills as are shown by the following recited Letters Patent of the United States are old: No. 731,733, granted to John McE. Ames, June 23, 1903; No. 752,685, granted to Geo. I. King, Feb. 28, 1904; No. 1,268,344, granted to Chas. A. Griffith, June 4, 1918; and No. 1,426,729, granted to Chas. A. Griffith, Aug. 22, 1922.

It is stated in the petition that when the application for this Patent No. 1,486,547 was filed and prosecuted it was intended that such application should relate to the plate-metal end-sill member described and claimed in said application and to combinations including such members, and "not to such limited structural channel end sills as are disclosed" by the above-cited patents, and that therefore "for the purpose of interpreting the claims of his said Letters Patent to definitely limit them as intended and as justified by their language and the language of the specification," the quoted "disclaiming paragraph" is added to the patent specification.

The statute pertinent in the consideration of this petition (sec. 4917 R. S.) reads in part as follows:

Whenever, through inadvertence, accident, or mistake, and without any fraudulent or deceptive intention, a patentee has claimed more than that of which he was the original or first inventor or discoverer, his patent shall be valid for all that part which is truly and justly his own, provided the same is a material or substantial part of the thing patented; and such patentee, his heirs or assigns, whether of the whole or any sectional interest therein, may, on payment of the fee required by law, make disclaimer of such parts of the thing patented as he shall not choose to claim or to hold by virtue of the patent or assignment, stating therein the extent of his interest in such patent.

[1] The paragraph sought to be inserted under this petition merely states that the patenee is aware that certain structural elements shown in certain patents (all granted before patentee's application was filed) are old. But knowledge of these patents is imputed to him under the law (*Robinson on Patents*, sec. 112, 627), and a mere recital that an applicant or patentee knew the state of the art when he entered the field or took his patent neither adds to nor detracts from the force of the patent.

A disclaimer is valid which only abandons something claimed in the patent, but not needed, without broadening or enlarging any claim, and leaving the claims fully supported by the original specification. *Marconi Wireless Telegraph Co. v. De Forest Radio T. and T. Co.*, 243 F. R. 560.

[2] In the proposed "disclaiming paragraph" sought insertion by the instant petition nothing in the patent is abandoned either of description or claim, and therefore the paragraph is not considered to be a disclaimer under the statute.

The petition must be and accordingly is denied.
